FEDERAL CEMENT TILE COMPANY, 608 S. Dearborn Street, Chicago

Gentlemen: Without obligation to me please send free a copy of your new book, "Roof Standards."

Name .....

Company .....

Position .....

Street .....

City .....

State .....

EVR-251-RTG

THIS new book, just off the press, gives complete standards for the correct incorporation of Federal Cement Tile details into plans and specifications of new structures or the remodeling of existing buildings. Architects, engineers, contractors and specification writers will find this book invaluable. Together with 26 pages of blue prints it contains tables and data for instant reference. This copy of 1925 "Roof Standards" will be sent free on receipt of the coupon properly filled in or other form of request.

Interstate Power Control

SECRETARY HOOVER'S argument against federal control of power, made to the N. E. L. A. at San Francisco last week, was timely and impressive. Political philosophy today is setting against further extension of federal authority; the states are coming back into their own. But the amazing extension of electrical service and the difficulties that arise when the political barrier of a state boundary interferes with the freedom of that extension have led many to believe the only solution of government control lies in Washington. Mr. Hoover, in his customary role of advocate of less government in business, points out the dangers of such a move, but he emphasizes, too, the excellent service that the states have done in controlling power utilities and commends to the states the possibilities of co-operation in the continuance of such control. Interstate arrangements for the control of overlapping power lines have already made some progress but they must be encouraged, not only by the people but also by the power companies, for in such co-operation lies the only relief from a future federal control.

Engineering Museum Going Forward

PROSPECTS for the early success of the movement for an engineering museum are measurably brightened by the enlistment of Samuel Insull. His well known capacity for large affairs and the confidence that he will inspire among prospective benefactors make the museum much more of a possibility than it has hitherto been. The meeting the other day, noted in our news columns, was well attended by some of the leaders in engineering and industry and by representatives of the major engineering societies. Their interest is now assured. With a stable organization and the backing of engineers it may well be hoped that the museums, both the main one at Washington and the local units at New York, Pittsburgh and Chicago, will in fair time be available as inspiration and education to the engineer.

Economy in Dam Design

A STATEMENT of the conditions and reasons back of the development of the design of the Dix dam is given in this issue. The just completed structure, it will be recalled, is the largest rock-fill dam ever built, and compares well in size with the largest dams of any type. It also is significant as representing the introduction into Eastern practice of this peculiarly Western type. Besides the great height, the steep slopes of the dam and the nature of its water-side protection are most noteworthy. It is to be remembered in considering these features that the dam was designed under great pressure for economy. The funds available for the enterprise were limited, and everything possible had to be done to attain lowest cost. Fortunate local conditions made it readily possible to obtain a spillway capacity so much beyond prospective needs that the safety of the dam against overtopping seems absolutely assured. Inasmuch as rock-fill dams have never failed by percolation or bodily washout, but only by the wash occurring in overflow, the safety and permanence of the dam may be taken for granted. It is somewhat more of a question whether the concrete watertight membrane placed on the freshly dumped fill will adapt itself to the settlement of the embankment without cracking. Where the supply of water is only enough for the expected demand, as here, the loss of water in case cracks of serious proportions should develop may easily prove critical so far as financial results are concerned. There is only a small amount of available experience to guide in designing such a membrane and judging of its performance, however, and much may be learned from the service results at the Dix dam for the benefit of future construction of similar works.

An Argument Gone

THE Chicago Sanitary District has for some time been contending that the Niagara Falls power interests did not have clean hands in complaining about Chicago's excess use of lake water. That line of attack is demolished by the report just issued by officials of the Canadian and the United States governments who report that the treaty limitations of use of Niagara water have not been exceeded on either side of the line. So this "you're another" kind of argument, never a very impressive one for an important city to take, is denied Chicago.

Seasonal Repairs

SEASONAL employment is as largely a problem of distributing building repairs as of spreading construction over twelve months instead of six months. Indeed, today in most large cities construction shows fewer seasonal peaks than do repairs and renovating. Owners of rentable property are notoriously in the habit of bunching their arrangements for new tenants into a month or two of the fall and spring renting seasons. So also do owners who close their city houses in summer and their country places in winter and postpone putting either in order until a few weeks before changing residence from one to the other. Indeed the whole practice of building repairs, painting, decorating, alterations and general renovation is highly seasonal due solely to habit and custom. The result is overtime work and prices, less efficient workmen and rushed jobs. The owner pays. Just how much more he pays is difficult to tell but it is enough to profit him highly by doing June repair work instead of September repair work. Building Congresses which are battling for a twelve-month distribution of repair work deserve the full support of engineers and contractors.

Arterial Road Costs

MODERN highway costs reach their peak in the construction of arterial highways through great metropolitan districts. An example is the arterial road west from the Holland tunnel as described in the issue of April 30. According to tentative estimates this 22-mile road will cost some $30,000,000. Its construction, however, involves several expensive tunnels, depressed roads and viaducts not normally a condition of arterial road development. A more normal example is the Great West Road just opened for London traffic to and from the west counties of England. It is 8½ miles long and cost £1,150,000 or virtually $720,000 a mile. There were no special structures comparable with the tunnels and viaducts of the Holland tunnel road. Instead the money went for straightforward road-building and land acquirement for a 115-ft. right of way with a 50-ft. asphalt on concrete pavement, two parkways and two foot walks. These two roads by no means include all the examples worthy of mention but they are works accomplished or in progress and they perhaps mark the range in costs—$750,000 to $1,500,000 a mile—which confront the arterial road builder. These are astounding figures to contemplate.

Two Cities Reject Manager Plan

GENERAL apathy on both sides played a great part in the recent defeat of the city manager plan at both Yonkers and Schenectady, N. Y. Half of the registered voters stayed away from the polls in each city; but the two-to-one negative vote was decisive enough in each case. Inertia, which is general apathy in another form, accounts for many of the adverse votes; or conservatism, if that term is preferred. Among the more positive forces in the two defeats may be counted the more or less professional politicians, who rarely like to see a change of this sort, and those to whom ward representation seems the only "American" way. The latter are slow to see that representation of areas is far less significant than that of policies or principles and that the latter can best be secured by proportional representation. Besides the election-at-large bogey, another one is said to have played a part; at least in Yonkers, where the old plea was advanced that the city manager plan may work in small places but not in one of a hundred thousand population or more. Some of these people have not heard or will not remember that Dayton has had a city manager for years; Cleveland for 18 months; and that Cincinnati recently voted for the manager plan. The effect of the Yonkers and Schenectady defeats on the movement for the adoption of the manager plan at Rochester, N. Y., will be looked for with interest. Latest accounts indicate that a proposal to provide for proportional representation at Rochester was finally negatived, which is perhaps a wise decision, especially as it can be voted on later and separately if desired.

Wanted: A Drive for Highway Safety

THE census of automobile fatalities in our cities for 1924 has just been issued by the government. It is far from hopeful. Accidents are increasing in nearly every city, not only in number but per capita. That they are decreasing in number per automobiles in use is not the important thing the automobile people try to make it out to be. The figures show that so far, at least, the campaign for highway safety has not begun to make itself felt, unless possibly it has served to retard what would otherwise have been an increasing acceleration of accidents. But it is hardly possible that the new movements for highway safety can fail soon to impress themselves. The campaign is fast growing. Especially should the impetus of the Hoover conference held at Washington last December begin soon to be felt. That conference was the first of what promises to be a series of meetings which will serve each year as the culmination of a great deal of concentrated work by experts. Already has next December's conference organized and the committees which are to report then are hard at work studying not so much how highway safety can be assured in an ideal community but how those principles which are known to conduce to safety can be successfully and practically applied. The conference seeks now to find things that will work and to find ways to make them work. And it is being backed up by consistent publicity and by regional and local meetings similar to the ones at Washington. The statistics just issued show that more work and more intensive work is needed. Every one should help.

Progress in Filtration

PERIODICALLY in the development of the art of any particular field a summing up of the progress is essential. Such a summary of a detail in the field of filtration of water is presented in the symposium elsewhere in this issue on the status of a particular type of underdrain. A wooden grating made of 1-in. boards laid on edge and separated by spacers of equal thickness is the type under discussion. Out of the difficulties from the blowing-up of the sand bed that this type presented at Sacramento came the use of a cemented-gravel layer used to hold the gravel in place. Cemented-gravel is European, Canadian and South American practice, not much used in the United States.

Some difference of opinion yet exists as to the merits, usefulness and necessary precautions essential to successful use of the slat-bottom underdrain. Its simplicity and low cost make it an alluring proposition for, as Wellington Donaldson says, it puts underdrain construction into the hands of carpenters. J. W. Armstrong, who proposed the type, has had one full-sized unit in successful operation for more than a year and has under construction additional filters using this design. J. W. Kelsey of St. Paul reported success with the system. A thick gravel layer 16 to 18 in., is one of the essentials apparently. Those who report failure have used thin layers. Opponents of the system adhere to the old theory on which the major number of underdrains are designed that an even distribution of wash water under the gravel layer must be obtained by material reduction of head through orifices of some kind, usually in metal. The deep gravel layer performs this service in the slat-bottom underdrain.

More light is needed on certain points but enough limitations are given to let future experimenters start without repeating the failures already made. Since Chicago is now seriously considering filtration, it is fitting that she should bear her share of the burden of experimental costs and establish a testing station for just such problems thus in turn adding her technical contribution to the long line of solutions of filter problems that other cities have made available for her use.

Get the Facts on Force Account

SOME weeks ago in Washington the Associated General Contractors launched a major drive against the doing of public work by force account, concentrating their attack upon the Corps of Engineers. Unfortunately, for an unprejudiced consideration of the case, the local press was used as the forum for a debate between the contractors and the Corps, and both sides, through the medium of interviews, resorted to the legal method of charging the opponent with a variety of crimes, not with any idea that they were all existent but in the hope of making some one of them stick. The resulting impression of the controversy was so confused that those who are honestly interested in getting some real light on the problem of public force account work would do better to disregard this current exhibition altogether.

Nevertheless, there is here a problem which engineers must consider. The ultimate end of all engineering is construction, the building or replacing of something of use or convenience. Approximately six billion dollars went into such construction in the United States last year, no inconsiderable part of the annual contribution to permanent wealth. Much of this is done for the people through their separate governments and a growing percentage of this government work is being carried out without the medium of contractors. How best to get that work completed at a minimum of cost is as much the duty of the engineer as it is his duty to guarantee the safety and sufficiency of the completed work.

If economy and security can be insured better by the government engineer acting as entrepreneur, undertaking not only design and inspection, but also the hiring of the labor, the purchasing of the material and the supervision of the construction itself, then it is time that the accepted contract system be discarded. But that system has the stamp of approval of time. It should not be discarded, or undermined insidiously by slow degrees, without full knowledge of how the proposed substitute is operating and toward what it ultimately tends. This calls for an examination of facts, which having been ascertained can be applied to test the validity of the argument that at present is for the most part a mere mental exercise.

In such mental exercise there is no denying the superior claims of the contract system. The arguments for it have been often recorded and need not be repeated here. They are so sound that even those who prosecute or advocate force account on special jobs are quick to protest their dislike for it as a general practice. But the special jobs fast multiply when construction organizations are built up and equipment is amassed and the exception soon becomes the rule. How economical do these operations really prove? Is the work actually cheaper, taking all things into consideration? Does it tend to reduce the number of contractors? Do engineering organizations doing construction become fossilized when safe from competition as to construction costs? These are some of the things that should be particularized.

The contractors are trying to get at those facts, but they are hampered on the one side by their inability to get from government bodies doing force account work a complete cost account and on the other by their own prejudice which unfortunately colors their comparative analyses and leads them into such fallacies as the comparison of the actual cost of the completed work with a preliminary estimate based on the engineer's design. Government bodies doing force account work for their part have done little toward justifying such activity, other than to present on specific operations figures that are most difficult of analysis and, in the case of some representatives of the Corps of Engineers, making ridiculous charges as to the motives of the contractors who are activating the drive against force account work. Calling names is not argument.

To get at the truth between those two is a difficult task. The investigator must disregard some of the common assumptions. He must hold to the criterion that the public has the right to have its construction work done at the lowest cost, but he must also remember that such lowest cost is not measured by the cost of a specific job but by the long time operation of a construction system. He must deny the inherent right of the contractor to existence but he must realize that experience has shown that bureaucratic or political control becomes inefficient and expensive. He must maintain that even communism cannot be successfully attacked merely by saying that it is communism but only by showing wherein communism is inefficient.

How can such an investigation be prosecuted? There is no hope of a complete investigation that will settle the question once and for all. This is not that kind of a problem. But it can be furthered by separate investigations by unbiased parties. Congress might do it for the federal departments, but Congressional investigations have not of late recommended themselves as trustworthy. Some of the investigatory branches of the executive, such as the Department of Commerce or the Federal Trade Commission, could do the job were it not for the so-called inter-departmental courtesy that forbids one bureau or department at Washington meddling in the affairs of another. Similar disabilities lie in any governmental investigation in state or city.

There are, too, our economic foundations and our technical societies. For them the opportunity is manifest and should be seized. By so doing they can render a great service to the construction industry and to the community. Doubtless the contractors have overemphasized the dangers in the increase of force account work. Taking it altogether it is still only a small proportion of the total construction work of the country. But it is increasing and the concern regarding the increase is warranted. The American Society of Civil Engineers, the National Industrial Conference Board or the Chamber of Commerce of the United States might any one of them well start an independent study of force account work and gather together some of the facts that are sadly lacking to those who would like to be able to judge fairly of its justification.

Meanwhile, since none of these agencies has seen fit to inaugurate such a study, this journal will undertake one of its own. During the coming summer a fact-finding campaign into the workings of specific force-account operations will be prosecuted by *Engineering News-Record*. No prejudices will govern this study and no preconceived notions will flavor its findings. It will be an honest effort to illuminate a dark land. We hope before winter comes to have contributed some basic data to this disputed subject.

Automatic Spillway Gates of Black Canyon Dam

Special Requirements Leading to Decision to Install Crest Gates of Drum Type Operated by Variations in Water Level—Details of Construction and Operating Results

By Julian Hinds
Assistant Designing Engineer, Bureau of Reclamation, Denver, Colo.

RECENTLY the U. S. Bureau of Reclamation completed and put into operation a power and diversion dam across the Payette River on the Boise irrigation project, Idaho, known as the Black Canyon dam (described in *Engineering News-Record*, Nov. 20, 1924, p. 818). Automatic spillway gates of drum type are installed on this dam, and these invite special consideration.

Reasons for Use—The purpose of the dam is to deliver water by pumping to the north side main canal of the Emmet Irrigation District, develop electric power, and (eventually) deliver water by gravity to the main canal of the Black Canyon division of the Boise reclamation project of the Bureau of Reclamation. The height to which the water above the dam may be raised is limited by the tracks of the Idaho Northern R.R., but, on the other hand, in order to meet the power and diversion requirements it is essential that the normal water surface in the river above the dam be held at the highest permissible level at all times. Flood waters must therefore be passed with practically no increase in water level. These conditions require some type of movable spillway crest.

Prompt and accurate adjustment of the crest to the varying flow of the river is essential. It is also necessary that the control shall not be subject to serious interruption by ice flows or by floating logs or trees. These considerations led to the selection of the drum type of crest gates, similar to the gates used for the spillway from the Arrowrock reservoir, on the same project, but with an automatic controlling device. While gates of this type are not uncommon, the Black Canyon installation is worthy of note because of the size of the gates, their curved upstream face, and the automatic control.

A good idea of the spillway may be had from the views Figs. 1 and 2 herewith. The three notches (Fig. 1) are each 64 ft. wide; the drum gates have a net lift of 14 ft. 6 in. They are placed on the line of the original river channel. The computed maximum spillway discharge with a water surface elevation of 2,497 ft. is approximately 40,000 sec.-ft. An appreciably larger flow can be passed for a short period without damage to the dam, although serious encroachment on the railroad grade is not permissible. A greater flood than 40,000 sec.-ft. is not expected.

General Gate Arrangement—The arrangement of the spillway section of the dam is shown in Fig. 3. Fig. 4 shows an enlarged section through the crest of the dam. The essential features of the drum gate and its fastenings are shown on Fig. 5. Each gate is a hollow prism, 64 ft. long, with one plane and two curved sides. The ends are closed and all joints are calked to make them watertight. Each gate operates in a drum chamber in the top of the dam, attachment being made by a cast-steel hinge at the upper upstream corner of the chamber.

The gate is raised and lowered by filling and emptying the drum chamber. Rubber seals along the downstream edge of the chamber and at the ends of the gate minimize leakage. Two sets of seals are required at the ends, one along the edge of the upstream face plate and one along the downstream face plate. Finished cast-iron plates set into the faces of the piers (Fig. 4) provide smooth surfaces against which the end seals slide. The downstream seal is housed in an iron seat casting, a section of which is shown in Fig. 5. These

FIG. 1—BLACK CANYON DRUM GATES DURING ERECTION

castings are made in 4-ft. lengths, bolted together and anchored into the concrete. One seat casting at each end and one at the center of each gate are provided with a removable top to facilitate the replacement of the rubber seal. Excessive leakage at the hinges is prevented by holding to the smallest permissible clearance between the hinge parts and between the hinge casting and the 10x½-in. cover plate on the anchorages. The bolt holes in the cover plate are slotted to facilitate adjustment.

Flow into the drum chamber for each gate is controlled separately by a 2.4x3-ft. slide gate set on the center line of one of the piers. The outflow is controlled normally by a 24-in. balanced valve, interconnected with the automatic control system. A separate outlet, closed by a 16-in. gate valve, is provided for auxiliary use. All hand controls, except the auxiliary gate valve, are located on top of the piers, where the operator has a full view of the spillway. The arrangement of the primary controls is shown in Fig. 6. The position of the 16-in. auxiliary valve is shown in Fig. 3. All outlet valves discharge into a 4x5-ft. tunnel running parallel to the axis of the dam, with outlet and air vent at each end of the spillway. Leakage into each drum is removed by two armored drain hose leading from the ends of the drum to a cast-iron drain pipe at the center of the drum chamber. This pipe connects with the discharge tunnel from the outlet valves.

A gallery or passageway through the dam, with con-

FIG. 2—MIDDLE GATE AT BLACK CANYON IN OPERATION

necting stairways, affords ready access to the operating equipment and to the tops of the piers. Each drum chamber is connected with the operating gallery by a manhole.

Gate Design—The Black Canyon drum gates depart from previous designs for like structures in that the upstream or top face is curved. It is thought that this curvature will improve the hydraulics of the spillway, and stabilize the pressures acting on the drum in partially raised positions.

The curved frame angles act both as beams and struts, and the stresses are more or less uncertain. The uncertainty is increased by the eccentricity of the hinge pins and by doubt as to the pressures to which the gate will be subjected. Neither the reaction of the overflowing jet of water, nor the magnitude of the frictional forces is known. In cases of doubt, parts were designed to take any stresses which might reasonably be assumed to come upon them.

It is necessary that the downstream face be smooth and accurately curved in order that the rubber sealing device may function properly. All rivets in this face were countersunk and tolerance in the radius of the face was limited to ¼ in. plus or minus. The manufacturers claim to have found this tolerance difficult to maintain.

Automatic Control — Each of the three gates is equipped with an automatic control, designed to maintain a fixed relation between the position of the gate and the quantity of water flowing over it. The assembled mechanism of one of these controls is shown in Fig. 6. When, due to an increase in flow, the water begins to overtop a gate, the gate must immediately start down, and must be stopped when it has reached a depth sufficient to permit the passage of the increased flow. This result is accomplished by placing the outlet valve under the control of both the drum gate and the water level above the dam. With the type of control used at Black Canyon, it is necessary that a definite variation in water level be permitted between no overflow and full discharge. A variation of 6 in. was assumed to be permissible.

Fig. 7 is a diagrammatic elevation of the control mechanism. The drum gate is indicated by dotted lines in the raised position and all other parts are shown in the positions they will occupy when the water is on the point of overtopping the crest.

Water for overcoming leakage from the drum chamber and for sustaining the drum gate in its raised position enters through the partially opened hand-operated inlet gate, *A*. This gate is permanently set at the smallest opening which can safely be depended on to maintain the required pressure in the drum chamber, against leakage, with the outlet valve closed. The drum gate is lowered by opening the balanced valve, *E*, and allowing the water to escape from the drum chamber, through the passages B and C. It is not necessary that the inlet gate be closed.

The outlet valves used at Black Canyon are 24 in. in diameter and have a 12-in. stroke. The type was developed originally for use as a bypass control for waterwheels. The valve is operated by the pressure of the water passing through it. The pressure in the chamber *E*, around the needle, is transmitted to the space *U* above the piston *J* through a restricted opening in the bypass pipe *G*. If there is no outlet from the chamber *U*, the pressure intensity on top of the piston will equal that on the bottom. The area exposed

FIG. 4—ENLARGED CREST SECTION (GATE REMOVED)

FIG. 3—SPILLWAY SECTION OF BLACK CANYON DAM

to pressure on the top being greater than on the bottom, the needle will be pressed against its seat. If the water is permitted to escape from the chamber *U* through an opening relatively larger than the opening in the bypass pipe, the pressure on top of the piston will drop and the needle will be lifted from its seat by the excess pressure on the exposed part of the bottom of the piston. The outflow from the chamber *U* is controlled through the ports *D* and the pilot valve *F*.

How the Control Acts—Starting with conditions as shown in Fig. 1, let the water surface be assumed to rise slowly. The well around the float *H* communicates with the reservoir through a passage leading to a point beyond the influence of the draw-down curve at the spillway crest. The water level in the float well is always the same as in the river above the dam. If the float is properly adjusted, it will be on the point of rising, with conditions as shown, and will start up with the rising water level. The motion of the float is communicated through the bracket *R* and the sheave rod *V* to the floating sheave *K*, where it is doubled and transmitted to the pilot valve *F* through the bronze tiller rope. When the pilot valve is lifted a short distance the outflow from the chamber *U* exceeds the inflow, the pressure drops and the piston and needle rise. The sleeve rod S is thus lifted until it approaches the pilot valve. Outflow from the chamber *U* is thus checked, pressure builds up above the piston and the needle stops. As the float continues to rise the pilot valve is

FIG. 5—DETAILS OF 14½ x 64-FT. DRUM GATE

gradually lifted higher, followed at all times by the needle of the balanced valve.

The first small movement of the balanced-valve needle will have no effect on the position of the drum gate, but will only increase the inflow through the gate *A*. When the balanced valve opening becomes such that with a pressure in the drum chamber just sufficient to support the drum gate, the outflow is exactly equal to the inflow,

FIG. 6—ARRANGEMENT OF OPERATING MACHINERY

it is in a position which may be called the balancing position. If the water surface continues to rise after this condition is reached, the balanced-valve opening is temporarily increased. As a result, the outflow exceeds the inflow, the pressure in the drum chamber drops and the drum gate starts down. The bronze tiller rope after passing over the floating sheave *K*, passes under the fixed sheave *L*, and is anchored to the sheave sector *M*. The sheave sector is keyed to an extension of the hinge of the drum gate and moves with the drum gate. As soon as the drum gates start down tiller rope paid out at *M* passes under the sheave *L* and over the sheave *K*, allowing the pilot valve to drop. The opening process is thus reversed, and the balanced valve forced down, as the drum gate continues to fall, until the balancing position is again reached. If the water surface continues to rise, this process will be repeated until the drum gate is entirely down.

The cycle of operation for a slowly falling water level is exactly opposite that described for a slowly rising level, the drum gate gradually coming up as the flow decreases. A sudden change in flow causes the balanced valve to open rapidly, but it comes promptly back to the balancing position when the drum gate reaches the correct height for the changed flow. It is not necessary for either the drum gate or the valve to "hunt" for the proper position.

If the water surface drops below normal, the float drops below the position shown in Fig. 7 until it en-

counters some obstruction placed purposely to stop it. Such a movement would ordinarily tend to slack the bronze tiller cable and allow it to kink. This is avoided by a slip joint connection to the valve and a cast-iron weight at the end of the tiller rope, as shown in Figs. 6 and 7. In case of an unprecedented flood the water surface might continue to rise after the drum gate is completely down. The stroke of the pilot valve is somewhat greater than that of the balanced valve. This excess stroke, added to the float movement necessary to fully open the balanced valve, from its balancing position, permits the water level to rise about 12 in. above the theoretical maximum before all play in the system is taken up. In case of a further rise, the float will be held submerged. All parts are amply strong to withstand the resulting strains.

The balancing position of the 24-in. valve need not be computed in advance. It is controlled by the leakage into and out of the drum chamber, by the opening of the inlet gate *A*, and by the coefficient of discharge for the valves. In fact, this position is not constant, but will change from time to time as the condition of the sealing devices and the setting of the inlet gate change. The opening for the balancing position is relatively small and variations are unimportant. After the equipment is in place, proper adjustment is secured by changing the length of the sheave rod *V* or of the bronze tiller rope.

A handwheel hoist, *W*, on top of the pier, flexibly

FIG. 7—DIAGRAM OF AUTOMATIC CONTROL

connected to the sheave rod may be used for lowering the drum gate by hand. Lifting the sheave rod with this hoist has the same effect as a rising of the water surface. The flexible connection permits free automatic operation when the handwheel hoist is down.

It should be noted that all parts controlled by the float are free-moving. No stuffing boxes or other parts likely to cause appreciable friction are used. The float was very carefully made, all joints being welded, and it is expected that it will be watertight. However, provision is made for the connection of a drain hose at some future time should leakage develop.

The various elements in Fig. 7 can readily be identified on Fig. 6, where they are shown to actual scale. The passage between the control gates and the drum chamber, corresponding to the passage *B* in Fig. 7 is shown dotted in Fig. 6. The method of connecting the sheave sector *M* to the drum gate is shown in Figs. 5 and 6. It will be noted that the 24-in. balanced valve is air vented a short distance below its seat.

FIG. 8—RUBBER SEAL

Rubber Seals—On spillway gates of the drum type previously installed, leakage from the drum chamber is controlled by metal devices. It is necessary that the metal seals be made in short lengths to permit adjustment to the irregularities of the face plate. There is always a small leakage at each of the joints between sections of the seal. Ordinarily this leakage is of no importance, but at Black Canyon the gates will be in operation throughout the entire year and any small leak will cause objectionable formation of ice in the winter. For that reason an unbroken seal was considered desirable, and the rubber device shown on the drawings was adopted. This seal is water-tight, except for a small leak at each end of the drum gate, due to imperfect connection between the front and end seals. An additional advantage of this type over the usual metal type of seal is that it prevents flow into as well as out of the drum chamber. This is not important at Black Canyon but is advantageous in installations where the drum gate is subject to submergence by the tail water.

Because the Black Canyon sealing device is new, a detailed section of it is shown in Fig. 8. The section and specifications for the seal were adopted after experimentation in the laboratories of the Gates Rubber Co. of Denver. Hollow rolls, solid rubber rolls and rolls with steel cable cores were considered and discarded. The section adopted proved to be very satisfactory from a manufacturing point of view.

Seal Specifications—The specifications are as follows:

Core. The core shall be made of 13.3-oz. Karded Peeler cord fabric, the breaking strength of each cord to be not less than 15 lb., frictioned two sides, skimmed two sides to total gage of from 0.050 in. to 0.055 in., containing at least 400 ends, rolled in such manner as to keep all cords parallel. The length of the fabric core shall exceed the length of the rubber roll by at least 2 ft. on each end, to facilitate the attachment of cables for pulling the sealing device into place.

Breaker Strip. The breaker strip shall be made of two plies of 10½-oz. breaker fabric, frictioned two sides; skimmed two sides to a total gage of 0.120 in. Skim one side with 0.015-in. graduate stock containing 80 to 85 per cent by volume of new plantation rubber. Skim the other side to complete the 0.120-in. gage with cushion stock having at least 95 per cent by volume of new plantation rubber. The breaker must be slit to avoid all laps except final longitudinal lap which shall be approximately ½ in.

Tread Stock. The tread stock shall consist of high-grade material containing 65 to 68 per cent by volume of new plantation rubber free from reclaim, whiting, silica and other coarse material, balanced in compound to permit

thorough cure of all elements without surface over cure. The tensile strength of the tread stock shall be not less than 3,200 lb. per square inch.

General Notes. The different elements shall be well cured and well bonded together so as to withstand the separation tests generally specified for high quality pneumatic cord tires. The surface finish shall be equivalent to that obtained from curing in a jacket of fiber containing 75 threads per inch in both warp and fill. The surface shall be free from spiral corrugations or longitudinal ridges.

Operation of Gates—The drum gates were put in service at the beginning of the 1924 irrigation season. Certain factors in connection with unfinished portions of the work made it desirable to confine the spillway discharge to the middle gate. Unfortunately the balanced valve for this gate was too tight and would not open under the pressure available. Rather than interrupt service to adjust the valve, it was decided to operate the gate by hand until the end of the season. The 16-in. auxiliary valve was used for this purpose. The gate proved to be much more stable under hand control than was expected. The two end gates were held in reserve, ready to be put into service if required.

At the end of the irrigation season the middle gate was lowered and its control valve adjusted. All of the gates were then put under automatic control, and appeared to operate satisfactorily in every respect. However, the flow available was small, and it was not possible to test the automatic operation throughout the full travel of the gates. After a few days' trial, it was necessary to draw down the water behind the dam to permit the installation of gates and penstock connections for the hydro-electric units of the power plant, which work was started in the fall of 1924. Plans are being made to run a full set of tests this summer, should a high-water period occur. The automatic operation has been entirely satisfactory as far as tested.

Designs for the dam and the spillway were prepared under the direction of J. L. Savage, designing engineer, Bureau of Reclamation. The drum gates were fabricated by the Omaha Steel Works of Omaha, Neb., and were erected by government forces under the supervision of Walter Ward, construction engineer, Bureau of Reclamation.

Tests of Bond Resistance in Reinforced-Concrete Beams

Results of Experiments by Bach and Graf Some Years Ago in Germany Give Valuable Information for Design of Reinforcing Bars—Four American Deformed Bars Among Types Tested

By W. A. Slater
Engineer-Physicist, Bureau of Standards, Washington, D. C.

An extensive series of bond tests with concrete beams was reported in Nos. 72-74 (1909) of "Forschungsarbeiten auf dem Gebiete des Ingenieurwesens" by C. Bach and O. Graf. The tests were made to test the effect on the bond resistance of certain variables existing in the concrete and of other variables in the beams. Among the former were variations in water content, character of aggregate, proportions of materials, cements, age and storage. Among the latter were variations in character of the surface of plain bars, form of section of plain bars (rounds, flats, angles, T's and I's), types of deformed bars, and position of load points. In all, 194 beams were tested and important results were obtained. Many of the results are valuable for establishing standards for design and as they have not found their way generally into the textbooks in this country, they are recorded here although they are of long standing.

The latest report of the Joint Committee on Standard Specifications for Concrete and Reinforced Concrete specifies that "An approved deformed bar shall be one that will develop a bond strength at least 25 per cent greater than a plain round bar of equivalent cross-sectional area," but specifies no standard method of making tests to determine bond resistance. The specified working bond stress for plain bars is 4 per cent of the compressive strength of 6x12-in. concrete cylinders. For deformed bars it is 5 per cent of the compressive strength.

Usual Form of Tests—Most of the bond tests in this country have employed pull-out specimens in which a direct pull has been applied to a bar embedded in a concrete cylinder or prism, though it is almost always in flexural members that bond stresses are critical. In applying the results of pull-out tests to the determination of permissible bond stresses for the design of beams it is necessary to make a comparison of the bond resistance developed by bars of different types at certain arbitrarily selected stages of the test. If the bond resistance at first slip were used for the comparison, the advantage of even the best deformed bar would be questionable. On the other hand, if the resistance at maximum load were used almost any deformed bar would show a great advantage over a plain bar.

If a beam, so designed as to fail by slipping of the bars, is used as the test specimen, service conditions are approximated and the computed bond resistance at maximum load seems to offer a better criterion for judging the value of a deformed bar than the bond resistance at an arbitrarily selected amount of slip in a pull-out test. Of course, even with a beam as a test specimen, certain elements are neglected such as the tendency of a reinforcing bar to slip under long continued or repeated load. It seems reasonable, however, to believe that a long continued load would be more likely to overcome the slip resistance of a plain than that of a deformed bar. If this is so the advantage of a deformed bar over a plain bar would be at least as great for use with a long continued load as is found for a load of short duration and probably it would be greater. It was found by Abrams (Bulletin 71, University of Illinois, pp. 168 and 198) that under repeated loads, corrugated bars resisted slip more effectively than did plain bars and this fact seems to support the conclusion that deformed bars would show advantages with long continued loads.

It is worth while to summarize some of the results obtained by Bach and Graf, especially the values of these results for the bond resistance of plain round and deformed bars, and those showing the relation between

FIG. 1—DESIGN OF BEAMS TESTED IN BOND STRESS

bond resistance of plain round bars and compressive strength of the concrete. These form a valuable addition to the available data on bond resistance.

All values quoted have been converted from the metric to English units. No other computations were necessary since all the computed unit stresses were furnished in the original report. The stresses check very closely with those computed by the methods which have become standard in the United States. In the computations, the ratio, n, of the modulus of elasticity of the steel to that of the concrete seems to have been about 7.5. Figs. 3 and 9 have been prepared from the data reported in the tables, and the loads at first slip have been added to Fig. 4. Otherwise the figures presented here have been reproduced directly from the original paper.

Type of Beams—The beams were 11.8 in. square in cross-section and 7 ft. 1.04 in. long overall. They had a span of 6 ft. 7.8 in. The load was applied at the one-fourth points of the span as shown in Fig. 1.

The concrete used was made from 1 part by volume of Heidelberg portland cement, 2 parts of Rhine sand and 4 parts of Rhine gravel. Control specimens, cubes 11.8 in. (30 cm.) on an edge, were made only with the beams having plain bars. The average compressive strength of the concrete was 3,500 lb. per sq.in.

Of the bars used in the beams four were of American manufacture. These were the Johnson (the old type of corrugated bar), Diamond, Lug and Cup bars. In addition plain round bars and "wave" bars ("Welleneisen") were used. The bars are shown in Fig. 2. The plain round bars were approximately 1 in. in diameter (25 mm.) and had an average sectional area of 0.768 sq.in. The deformed bars generally had a slightly smaller sectional area. The yield-points of the reinforcement and the computed tensile stresses for the maximum loads on the beams are plotted in Fig. 3. It will be seen from this diagram that in several of the beams the yield-point and the tensile stress were so nearly the same that the beam must have been close to failure by tension in the reinforcement. However, the photographs showing the cracks in the tested beams strongly indicate that failure was not due to the high tensile stress in the reinforcement. Fig. 5 shows the cracks in the beams having plain bars. As typical of the beams

FIG. 3—RESULTS OF TESTS WITH DEFORMED BARS

having deformed bars, the photographs of the beams reinforced with Diamond bars are shown in Figs. 6 and 7. The presence of the diagonal tension cracks indicates that the beam may have been near failure by diagonal tension under the maximum load. Some diagonal cracks were present in most of the beams having deformed bars. However the shearing stresses plotted in Fig. 3 for the maximum load show that the highest shearing stress was about 145 lb. per sq.in. or about 4 per cent of the compressive strength of the cubes. With bars thoroughly anchored against bond failure, diagonal tension failure is not likely to occur at a shearing stress less than 8 per cent of the compressive strength of the concrete when tested as a cylinder whose height is twice its diameter (say about 6 per cent of the strength from cubes), and it seems safe to conclude that none of the failures were primarily due to diagonal tension.

Having eliminated (at least for the greater part) the

FIG. 2—TYPES OF DEFORMED BARS USED IN THE TESTS

tensile stresses and the shearing stresses as causes of failure, it appears reasonable to use these results for a comparison of the bond resistance of different types of bars.

The report gives for each group of three beams the maximum plus and minus variations of the computed bond stress (for maximum loads) from the mean value for that group. A summary of these variations follows:

FIG. 4—FURTHER RESULTS OF TESTS WITH DEFORMED BARS

Type of Bar	No. of Groups	Maximum Variations from Mean Bond Stress at Maximum Load (Per Cent) Plus	Minus
Round bars	28	9.6	8.1
Deformed bars	5	3.6	2.8
Flat bars and structural shapes	6	7.1	9.7
Average for all tests	39	8.5	7.7

In Fig. 3 the average of the maximum positive and negative (signs disregarded) variations are plotted for the six groups included in that figure.

Although the slip of the end of the bar was tabulated in the report, the authors seem to have based their conclusions mainly on the maximum loads, giving little or no discussion of bond stresses at loads causing the first end slip. However the tables seem to justify the conclusion that although the load causing the first slip of the reinforcement was little greater than the load causing the first crack for the beams having plain bars, where deformed bars were used the load causing first slip was much greater than that causing the first crack.

FIG. 5—BEAMS WITH PLAIN BARS; SIDE VIEW AFTER TEST

The average loads causing the first crack and those causing the first slip have been plotted in Fig. 4.

Fig. 9 shows the relation between the compressive strength of the concrete from the cube tests and the bond resistance at maximum load for beams reinforced with plain round bars. The mean line shown corresponds to a bond stress of 0.107 times the compressive strength. The other lines are 12 per cent higher and 12 per cent lower, respectively, than the mean line and include between them all but five of the points. A similar relation between bond resistance for pull-out specimens and compressive strength is shown in "Tests of Bond Between Concrete and Steel," p. 95, by D. A. Abrams, Bulletin 71, University of Illinois Engineering Experiment Station. He found the average ratio of bond resistance from pull-out tests to the compressive strength of cubes to be 0.166 for a slip of 0.0005 in. and 0.24 for the maximum load. Since Abrams found lower bond resistance for beams than for pull-out specimens, the fact that the slopes of the lines in Fig. 9 are less than the corresponding slopes found by Abrams for pull-out tests does not indicate an inconsistency between the results of the two investigations. The following is a free translation of the comments of the authors of the report, on the significance of the tests with deformed bars:

"For the slip (bond) resistance computed according to the official methods (using the average circumferences of the bars) the values given in Fig. 4 were obtained. The American bars show therein a considerably higher slip resistance than straight round bars. The greatest increase over the plain bars was 60 per cent (for Diamond bars) and the least was 36 per cent (for Cup bars). The difference would have been still greater if a splitting off of the encasing concrete had not taken place. (The splitting referred to by the authors is shown by the longitudinal cracks apparent on the bottom of the beams in Fig. 7.)

"On the basis of the slip resistance per unit of total surface area the "wave" bar ("Welleneisen") is inferior to the plain round bar. If the comparison is made on the basis of the maximum load per pound of

FIG. 6—BEAMS WITH DIAMOND BARS; SIDE VIEW AFTER TEST

reinforcement the relative positions are indicated by the following table:

Bar	Maximum Load per Pound of Steel, Lb.
Johnson	3,960
Diamond	3,950
Lug	3,720
Cup	3,930
Wave	2,935
Plain round	2,305

With this comparison the Johnson, Diamond, Lug and Cup bars appear to have about equal values. A considerably lower value was found for the wave bar and a still lower value for the plain round.

FIG. 7—BEAMS WITH DIAMOND BARS; BOTTOM VIEW AFTER TEST

"With all the beams longitudinal cracks were observed in the concrete covering before the beginning of slip. With progress of the slipping of the deformed bars the adjacent concrete burst off at the maximum load. Figs. 7 and 8 show the bursting effect of the bars on the beam. Fig. 8 is especially instructive. Here the reinforcement (a Lug bar) has split the end of the beam entirely apart.

"After the test, pieces of concrete remained in the recesses of the Johnson, Diamond and Cup bars and on the lugs of the Lug bars. As the slip resistance was overcome the bars had sheared off portions of the concrete which resisted their movement."

Comparison of Values—It is interesting to compare the high value of the slip resistance found for the American deformed bars with the values for plain round bars which had been heavily rusted. The American bars showed 427 to 516 lb. per sq.in., a little greater

FIG. 8—MANNER OF FAILURE OF BEAMS REINFORCED WITH LUG BARS

on the average, than the 416 lb. per sq.in. found for the rusted bars. The considerable damage to the beams which had taken place with the American bars did not occur with the rusted plain bars.

In comparison with the beams which employed plain round bars the beams with Johnson, Diamond and Cup bars had a large number of cracks. The beams with Lug bars and those with wave bars had a larger number of cracks than did those with plain round bars but not so many as those with Johnson, Diamond and Cup bars. Where the cracks were greater in number they were smaller than those in the beams with plain round bars.

Of special interest is the curve in Fig. 4 showing the load under which the first crack appeared. It is very nearly a horizontal straight line. So also is the curve for the tensile stress, f_t, computed according to the official regulations for a load just before the occurrence of the first crack. A similar curve shows the total deflection under a load of 6,600 lb.

This abstract includes only a small part of the report which gives data on the effect of many other variables on the bond resistance. The data given here bear especially on the design of a standard test specimen for comparing the bond resistance of different types of reinforcing bars.

In a beam to be used as a test specimen for bond it is essential that before the tensile stress in the steel

FIG. 9—RELATION BETWEEN COMPRESSIVE STRENGTH OF CONCRETE AND MAXIMUM BOND RESISTANCE

reach the yield-point or the shear in the beams exceed about 10 per cent of the compressive strength of the concrete, a very high bond stress shall have been developed. Otherwise failure is likely to occur by tension in the steel or by diagonal tension in the beam and the test will yield little information on bond resistance.

Assuming that structural grade steel may be used with concrete having a compressive strength, in 6x12-in. cylinders, of 2,000 lb. per sq.in., stresses of 40,000, 200 and 500 lb. per sq.in. in tension, shear and bond respectively, may be taken as about the proper relation between stresses to insure bond failure with either plain or deformed bars. This will require a beam 7.85 in. wide and with load points 20 in. from the support. Whatever depth is chosen, the above relations between computed stresses will remain the same. Therefore a beam 8 in. wide, 12 in. deep, reinforced with a 1-in. bar and having a span of 60 in., with loads at the one-third points of the span, seems to meet the requirements. Such a specimen should be provided with stirrups. For this purpose vertical U-stirrups of ¼-in. round, spaced 3 in. c. to c., are suggested. The most potent argument against the use of stirrups in a beam designed as a bond specimen will be probably that in practice not all beams have stirrups, that the stirrups in the test specimen will add to the bond resistance and that therefore a value which is too great for design purposes will be obtained from the tests. To the writer, these objections to the use of stirrups do not seem valid. In a beam reinforced with a good deformed bar it is difficult to develop a load high enough to determine the maximum bond resistance if the beam does not have stirrups because the failure is likely to be by diagonal tension. In practice, it is not permissible generally to use a shearing stress greater than 40 lb. per sq.in. without providing stirrups and at this shearing stress the bond stress will usually be quite low. Since practically all reinforced-concrete beams in which the bond stress is critical have stirrups there should be no objection to the use of stirrups in the standard test specimen.

This statement does not fully take into consideration the conditions frequently existing in footings where, on account of the use of reinforcing bars at right angles to each other, cracks may open along a bar and permit slipping at comparatively low bond stresses. Such cases require special and careful consideration.

It is true that the same object could be attained (in part at least and possibly better) by increasing the width of the beam as by using stirrups. It is believed, however, that the narrower beam with stirrups will keep the test conditions more strictly within the field in which the results are to be applied in design than will a wider beam without stirrups. Unwieldiness of test specimen also will be guarded against by the use of the narrower beam. Some investigation aimed at determining the proper form of test specimen is much needed. Such an investigation should also obtain data bearing on the desirability of using a long continued load in the standard tests.

Completion of the Welland Canal

Completion of the Welland ship canal connecting Lake Erie and Ontario is expected during the year 1929, according to estimates of the Ontario government. Up to the end of March, 1925, the sum of $51,200,000 had been spent upon the project. Approximately $100,000,000 is the estimated total cost.

Refuse Collection and Disposal in Pittsburgh

Engineers Find Record Per Capita Collection Under Contract and Advise Continuation of Plan With Minor Changes

Abstract of a Report made to the City of Pittsburgh, Pa., by Morris Knowles, Incorporated, Engineers, Pittsburgh, Pa.

THE MAIN conclusions of this report are: (1) The quantities of garbage and rubbish collected in Pittsburgh, Pa., are higher per capita than in any other American city (see table). (2) Pittsburgh is probably the only large city in the United States in which a complete collection of garbage and household trash or rubbish is carried out entirely by contractors. (3) The contract system has proven cheaper than the amount estimated for municipal ownership and operation. (4) Unique features of the contracts now in force as well as suggested improvements in these contracts warrant the continuance of the contract system, with some recommended changes.

While the amount of garbage per capita in Pittsburgh is only slightly greater than that for Washington, D. C., it is considerably greater than in any of the other cities listed in the accompanying table. None of these cities, however, compares in any way with Pittsburgh in the quantity of rubbish collected per capita. This can be accounted for primarily by the complete and thorough system of collection now in use, and particularly by the fact that the contractors are paid on a tonnage basis and are careful therefore to get all the material available and to keep very accurate records. The fact that Pittsburgh is a gas burning city also tends to increase the quantity of household rubbish and the amount of soiled and unsalvageable material.

Contractors—Contracting companies now perform the entire service for the city of Pittsburgh, one confining its operations to the "North Side" and the other to "Peninsular Pittsburgh" and the "South Side." Both collect garbage and rubbish, separately. The garbage is reduced with reclamation of grease and tankage. Rubbish is incinerated after sa vaging to some extent. No public collection of ashes is made.

In one respect the system in Pittsburgh is somewhat different from that of other cities of its size.

Where the service is not carried out entirely under municipal ownership and operation, other municipalities generally contract for the disposal of material after it is delivered to the contractor either on scows, at a loading station, or at the disposal plant. Cincinnati has complete collection and disposal of garbage by contract but Pittsburgh is the only large city having complete collection and disposal of both garbage and rubbish by contracting corporations. In fact, Pittsburgh is one of the few gas burning cities which has a complete and thorough rubbish collection system. The continuance of the contract system is the special recommendation of this report, and is brought about primarily because of cost, and secondly because of certain provisions which can be incorporated in the contracts.

Cost—In view of the large quantities per capita, it was deemed advisable to make all studies on a tonnage basis. The present weighted average cost of collecting garbage in Pittsburgh is $3.80 per ton, while the average in seven of the cities in the United States, where records were available, is $4.47 per ton, excluding in both cases any allowance for interest, depreciation, federal taxes and profit. The total present cost of collection and disposal, including an allowance of $1.50 per ton to the contractors for interest, depreciation, profit and federal taxes, is $6.30 per ton for garbage and $7.67 per ton for rubbish. (Price bid less a profit-sharing rebate of $1.50 a ton.) Studies of the cost of owning and operating the system municipally showed that the combined collection of garbage and rubbish would be cheaper than the separate system now used. The estimated cost for 1925 on the basis of combined collection and incineration is $6.50 per ton, which cost, it is estimated, will gradually reduce to about $6.30 per ton by 1935. The estimated cost is but slightly less than the average actually being paid the contractors. Assuming the same efficiency by the municipal organization as now practiced by the contractors, and including a return on an investment in plants and equipment of $3,500,000, little or nothing could be saved by changing over from the contract system to municipal ownership at this time.

Special Features of Contract—After a very complete study of the advantages and disadvantages of the contract system, it is recommended that (1) the contract provide primarily for the continuance of the system of paying a definite rate per ton for collection and disposal; (2) for the imposition of penalties as liquidated damages for failure of the contractors to collect in any specific case; (3) that there be a sliding scale for rebating to the city profits in excess of given amounts per ton.

The price per ton basis furnishes an incentive to the contractor to collect all material. Since his profit is increased with the additional tonnage disposed of, this will result in uniformity and completeness of collection. Fines are now imposed upon the contractors upon failure to collect within 24 hours after the filing of a complaint. The changes recommended in the contract would call for the fining of the contractors upon the filing of all bona fide complaints. This would tend further to reduce the total number of complaints.

GARBAGE AND REFUSE COLLECTIONS IN NINE CITIES

	Pounds per Capita per Year	
	Garbage	Rubbish
Pittsburgh	328	375
Washington, D. C.	315	79
Detroit	257	...
Cleveland	247	...
Philadelphia	246	...
Boston	208	85
Milwaukee	195	...
Rochester	148	66
Buffalo	...	116

Under the present contract there is rebated to the city any amount by which the earnings of the company exceed $1.50 per ton; this amount being fixed as a fair allowance for interest, depreciation, profit and federal taxes. The report recommends that a sliding scale be substituted. This sliding scale should provide a means by which the city and the contractor may both share in the difference between the cost and the bid price. A rebate of this nature would consist of an increasing proportion of the difference accruing to the contractor, so that the greater the economy achieved, the greater the profit to the contractor. It may be that this modification could be varied as experience indicated, and therefore but a slight change is recommended immediately. The results of experience with such a change will indicate whether additional steps might be taken another year. The wording of the suggested contract pertaining to this provision is as follows:

"Provided it is the intent and meaning of this contract that the above-mentioned rates shall be the maximum to be received by the contractor for said work and that the contractor agrees that said rate shall be reduced to a rate equal to the cost of doing the work according to the specifications, which cost shall not include any allowance for depreciation of plant and equipment, plus $1.50 per ton net profit, out of which profit are paid any taxes due the United States Government from the contractor; provided, however, that should the reduction below the above-mentioned rates exceed 75c. per ton, then the contractor shall be entitled to participate equally with the city of Pittsburgh in all savings above 75c. and not exceeding $1.25, and provided further that should such saving exceed $1.25, any amounts in excess of $1.25 shall accrue 60 per cent to the contractor and 40 per cent to the city of Pittsburgh."

Thus the city can obtain all the advantages of cost-plus-variable-fee contract, without the attendant disadvantage of taking away from the contractor the incentive for greater profit due to efficient performance. Such a contract would have the additional advantage of fixing a maximum price which may not be exceeded and therefore would limit the liability of the city under the contract.

(Subsequent to submission of this report, the city council, over the veto of the mayor, has approved contracts with the old contractors upon the same basis as that of last year—$7.03 per ton for garbage and $8.27 for refuse, with a rebate to the city of earnings in excess of $1.50 per ton. There was no competition.)

Dirt Roads Improved by Lime Mixed with Surface Soil

Test Roads in Missouri Show Less Mud and Fewer Ruts—Maintenance Made Easier—Theory of Action Unexplained

BY E. J. MCCAUSTLAND
Dean, School of Engineering, University of Missouri, Columbia, Mo.

Extract from a paper read before the National Lime Association at its convention at Briarcliff Manor, New York, May 26-29, 1925.

THE common agricultural soils containing silts, loams or clays are never entirely suitable for all-weather roads; and yet it is likely that more than 80 per cent of all country and by-roads for generations to come will of necessity be constructed upon and of such soils. It is a pressing problem to know what can be done to improve this situation.

In the fall of 1923 the Engineering Experiment Station of the University of Missouri entered into a co-operative agreement with the National Lime Association to conduct field and laboratory investigations in an attempt to determine the effect of the use of commercial lime on earth roads, with the hope of reducing both the inconveniences and the expenditures caused by the formation of mud. The work was placed directly in charge of Horace W. Wood, Jr., as research fellow in the experiment station and the material used in the investigations was donated by some of the constituent companies of the National Lime Association.

Laboratory tests were begun in December, 1923, to determine the more obvious physical characteristics of the soils under investigation and to become acquainted with the changes wrought in those characteristics by the addition of predetermined percentages by weight of lime. At a somewhat later time selected stretches of clay roads, subject to heavy traffic, were treated with varying percentages of hydrated lime and these stretches have been kept under observation for a number of months. The winter season of 1924-25 was an extremely trying one on these test roads because of a heavy fall of sleet and ice early in December and a continuation through the winter of alternating periods of thawing and freezing. In every case, however, these tests sections, all of which have been carrying traffic during the past seven to eleven months, show to the most casual observer the distinct advantage of lime admixtures in preventing surface stickiness and the formation of deep ruts under traffic. In brief, it seems to have been established beyond question that the addition of hydrated lime in the proportion of from 2 to 5 per cent dry weight to clay soils will materially reduce the tendency to form mud and prevent to a great degree the formation of ruts; there is reason to believe, however, that such treatment will not in any degree lessen the production of dust and in some cases the dust may be increased.

Test Sections—The following facts are abstracted from Mr. Wood's monthly reports: Early in July, 1924, a stretch of 500 ft. of road near Hallsville, Mo., was treated with hydrated lime to a depth of 5 in. On 250 ft. the proportion used was 2 per cent by dry weight and on the remaining 250 ft. 5 per cent by weight was incorporated in the soil. Later a section of road 250 ft. long was treated with 5 per cent of hydrated lime incorporated to a depth of only 2 in. for purposes of comparison. These road sections have been under careful observation since the original treatment and especially after rains; the clay and lime mixture does not stick on the wheels of passing vehicles but smooths out and packs much more quickly than does the untreated clay; there appears to be a more uniform vertical distribution of moisture in the treated soil, and a reduced moisture content at the bottom of the treated section. Maintenance is therefore more easily accomplished on the treated portion because there is no formation of the hard crust on the top before the road is sufficiently dry to drag, such as is characteristic of the untreated clays. No marked difference appears in the results brought about by the different depths of incorporation and this is of some importance since it so directly affects cost of treatment. The laboratory tests of the heavy clays indicated a slight retardation of surface evaporation on the treated samples but this fact seems to have no practical significance. Some two months after the Hallsville experiment was begun it was observed that there was no development of ruts in the treated portion of the road following heavy rains while the untreated portion showed ruts from 2 to 4 in. in depth. Furthermore, the maintenance of the treated stretch of road seemed to be much more easily accomplished than that of the untreated part, mostly due to the fact that it could be begun much more promptly after the rains ceased.

Two other important test roads were established; one during September, 1924, in the Missouri River bottom lands near Jefferson City where the native soil is known as a Wabash clay. This was divided into two sections of 500 ft. each, treated with 5 per cent hydrated lime, one section to a depth of 2 in. and the other a depth of 6 in. A second stretch of 400 ft. was established about Nov. 1 at Matney near St. Joseph, Mo., on a heavy blue clay with 5 per cent of lime to a depth of 6 in. On March 1 after the winter season the Jefferson City test road was found to be in excellent condition as compared with the untreated portions particularly in the matter of freedom from ruts. This was especially satisfactory considering the trying weather of the winter season. The advantageous results of lime treatment, however, were not so apparent on the St. Joseph road so early in the season. This was in some degree due to the fact that treatment took place late in the autumn and the road was not thoroughly consolidated when freezing occurred. The ice cap which formed in December persisted for some weeks and when the breakup came there was a considerable development of mud for a short time. However, the traffic soon compacted the roadway and since that time the treated section has shown a marked advantage in comparison with the adjacent portion of the normal clay. An inspection on April 11 showed it to be in good condition. The following tabulation offers in condensed form information relating to the various field test sections:

Date of Treatment	Location	Kind of Material	Length of Section Ft.	Depth of Treatment, In.	Per Cent wt. hyd. Lime	Cost per 100 Ft.
1924	Hallsville Road:					
7-10	Section 1	Clay	250	5	2	$19.15
7-10	Section 2	Clay	250	5	5	36.75
9-1	Section 3	Clay	250	2	5	15.13
	Jefferson City Road:					
9-15	Section 1	Wabash	500	2	5	16.05
	Section 2	Clay	500	6	5	38.26
11-1	St. Joseph Road	Clay	400	6	5	48.86

In all cases, except the last, the width of the roadway treated was 14 ft. The St. Joseph stretch was 20 ft. wide, but the cost indicated above is, for purposes of comparison, computed on the basis of 14-ft. width. The results of the investigation to date from the practical viewpoint seem to be encouraging, although the effect of a long period of time on the stability of the mixtures is yet to be determined. So far, the changing moisture content, due to alternate wetting and drying, the wide ranges in temperature and the action of traffic have not destroyed the favorable effects of the lime, but it is deemed wise to extend the observations over a longer period of time.

Only negative results may be reported, however, in relation to the fundamental physical phenomena investigated; in the words of Mr. Wood, "the tests . . . do not explain the basic action which results from the lime admixture." These facts are apparently established, however. The specific gravity of the soil is only slightly reduced by adding hydrated lime; the moisture holding capacity and moisture equivalent are reduced in heavy clays; the rate of evaporation is slightly retarded; but there is a more rapid capillary movement of the moisture after treatment; the voids in the soil become enlarged allowing an increased rate of percolation; and the bearing power at the higher moisture content is increased. We cannot, however, at this time offer a scientific explanation of these phenomena. It will no doubt need the co-operative efforts of the engineer, the physicist, the geologist and the colloidal chemist to lay bare the whole story of cause and effect.

Correcting the Name of V. P. Maun

The author of the article on Abrams' Water Cement Ratio that appeared in *Engineering News-Record* May 28, p. 885, was V. P. Maun, and not V. P. Mann as given there.

Building for Industrial Research and Testing Work

Housing Experimental Engineering Activities of Motor-Truck Factory—Laboratories and Machine Testing Rooms

INDUSTRIAL research and experimental testing work on materials and mechanism used in motor-truck construction are the purposes for which an engineering and laboratory building has been established as a part of the motor-truck manufacturing plant of the White Motor Co., Cleveland, Ohio. This building not only provides improved facilities for all the experimental work of the company, but also releases for physical and chemical testing certain portions of the plant buildings which have been occupied as laboratories.

FIG. 1—ENGINEERING BUILDING FOR THE WHITE MOTOR CO.

In view of the hard service and rough usage to which motor trucks are subjected, it is important that their engines and other mechanism should be able to withstand such severe service; this requirement is the basis of much experimental work on special grades of material and special types of construction. The company's combined design and research department establishes standard practice in motor work, develops new designs and perfects them by experiments and tests, so that they will be in condition for handling by the production department without further experiment. The engineering department controls all changes and refinements in designs, and conducts research into new devices and methods which may be applicable to motor transportation.

This engineering building, Fig. 1, is 160x150 ft., with a one-story portion 110 ft. wide which is divided into two equal parts by a tile fire wall and is covered by a steel-frame sawtooth roof with trusses of 40-ft. span in rows 10 ft. apart. At one side of this portion of the structure is a two-story building 160x40 ft. containing offices, laboratories and the designing department. This latter portion of the structure is designed for two additional stories when required, and the entire building can be extended at the rear and on one side. A basement extends under the entire area. Fig. 2 is a typical section of the one-story shop and Fig. 3 is a plan of the first floor.

Reinforced-concrete construction is used for the basement, with columns spaced 20x20 ft. c. to c. and carrying the first floor which is designed for 350-lb. load. The greater part of this floor is a 9-in. flat slab with four-way reinforcement, but in the experimental shop it is a paneled slab with central 8-in. panels 12x12 ft., while over the columns are belts 8 ft. wide and 12 to 16 in. thick. This floor slab is made exceptionally heavy in order to absorb the vibration that might result from a number of dynamometers running simultaneously. Built into this slab, in the testing or dynamometer room, there is a system of channel inserts and covered drains that together give great flexibility for setting up testing equipment.

Above the first floor the structure is of steel framing, of somewhat heavier design than is usual for such buildings. The upper floor, designed for a 150-lb. load, is of tile-joist construction, with 24- or 26-in. girders forming panels 16 ft. wide, with transverse joists, as shown in part by Fig. 3 and in detail by Fig. 4. With 24-in. beams, the joists are 4x8 in., spaced 16 in. c. to c.,

FIG. 2—TYPICAL SECTION OF ONE-STORY SHOP OF WHITE MOTOR CO. RESEARCH BUILDING

FIG. 3—PLAN OF ENGINEERING AND TESTING BUILDING

and having a 2-in. top slab; the tile fillers are 6x12 in. In the heavier panels with 26-in. beams, the 2-in. top slab has joists 6x10 in. spaced 18 in. c. to c., with tile fillers 8x12 in. In view of the future additional stories, provision is made for an elevator shaft, by building a suitable frame in the floor system and filling this with a removable slab (see Fig. 4). In the one-story portion of the building, the sawtooth roof framing is designed to carry 5-ton suspended loads on overhead traveling trolley hoists or transfer cranes.

FIG. 4—STRUCTURAL DETAILS

Red pressed brick is used for the outer walls, with steel sash and factory ribbed glass for the windows in the shop portion and in the rear of the two-story portion, but with wood sash in the remainder of the two-story building. Interior partitions are of brick and tile. Over the 9-in. slab of the first floor the floor construction consists of 1 in. of tar-rock, 2-in. plank and a wearing surface of 1⅛-in. square-edged maple. An exception to this is in the portion for offices, where ⅞-in. maple flooring is nailed to sleepers embedded in the fill; the latter construction is used also for the entire upper floor. The future third floor forms the roof of the second story. In the sawtooth roof, the flat slopes are covered with plank and ceiled on the under side with metal lath and plaster. The basement is utilized for storage and also contains the heating boiler and coal storage room.

On the first floor of the two-story front portion of the building are the engineering and metallurgical offices, physical testing room, chemical laboratory and microscope rooms. A design department occupies the entire second floor. The one-story portion at the rear, divided into equal parts by a tile wall, houses the engi-

neering research laboratories and a machine shop for use in connection with the experimental and research work.

About six dynamometers can be installed on the testing floor for testing engines, axles, transmissions and other parts or mechanisms. At each dynamometer station there are provided hot and cold water, compressed air at high and low pressure, gas and vacuum pipe connections, there are also electric connections for 110,- 220- and 440-volt alternating and direct current, so arranged as to make it impossible to connect from one potential to the other. The exhaust ventilating system leads through a separator into a blower of such capacity and so arranged that the back pressure on each engine can be controlled even when all dynamometers are running at full load. There is also a complete equipment of chemical and physical testing apparatus.

This engineering building was designed by the Watson Co., architects and engineers, Cleveland, in co-operation with Frank Brown, chief engineer, and H. Hylkema, plant engineer of the White company. It was built under their supervision by the George A. Rutherford Co., Cleveland. Its total cost was nearly $300,000, including equipment, and it houses about 100 men employed on the research work, including technical men and workmen.

Design Considerations in Dix River Rock-Fill Dam

Study of Experience with Rock-Fill Dams Justified Use of Steep Slopes and Concrete Facing — Great Spillway Capacity Removes Danger of Overtopping—Novel Closure Device—Large Concrete Plug Valve

A REVIEW of the problems encountered in planning the Dix River Dam of the Kentucky Hydro-Electric Co. was given by the designer of the dam, L. F. Harza, before the American Society of Civil Engineers at its recent Cincinnati meeting. The methods of building the great structure, which is the highest rock-fill dam ever attempted, were described in our issue of April 2, p. 548, but only bare reference was made at that time to the many interesting engineering features of the dam.

General Form of Dam—While rock-fill dams, though used extensively in the West, have remained foreign to the eastern half of the country, the Dix River enterprise presented conditions which either prevented or made undesirable the adoption of any other type. The width of the valley was considered too large for advantageous use of a single arch dam, and the proposed storage height (about 240 ft.) was believed to be so far beyond precedent in multiple-arch construction as to make it prudent not to consider this type. Material for hydraulic-fill construction was not available at the site of the dam. Something cheaper than the gravity type of dam was desired. In the early stages of the enterprise it was planned to develop initially only part of the head, the dam to be raised to full height later; under this condition a rock-fill dam was considered as lending itself well to increase of height without involving great extra expense in the initial construction. But even after it was decided to develop the full head from the start, the rock-fill type still was found to be the most suitable. The great storage height proposed was a factor in the conclusion, as it was thought that because of its inherent stability the rock-fill dam would involve less risk in an increase of height beyond prior practice than any other type.

Fig. 1 gives the dimensions and form of the structure and the principal features of its upstream face protection. The main design problems subsequent to the decision in favor of the rock-fill type were centered in this face protection. The dam itself was planned and built simply as a miscellaneous fill of rock of random size as excavated, placed substantially to maximum slope, and requiring no study of stability in view of the well-established resistance of such structures to displacement or distortion by water pressure.

A dense, non-crystalline limestone free from fossils is the material of the dam. It was found to have an absorption of only 0.079 per cent, while its crushing strength ranged from 12,500 to 15,000 lb. per sq.in.

The downstream slope of the dam is 1 on 1.4, slightly flatter than the natural slope resulting when the material is dumped over the top of a high slope, which is 1 on 1.3, approximately. When carefully placed the material will stand at steeper slope, however, and accordingly the upstream face is built to a slope of 1 on 1.2 at the bottom, changing to 1 on 1 at the top.

In order to make the dam substantially watertight, the upstream face is covered with a concrete paving. This pavement rests on a tightly laid dry rubble slope-wall placed directly on the rock fill, with a thickness ranging from 14 ft. at the base of the dam to about 7 ft. at normal water level.

Design of Facing—The rubble slope-wall, built of large stones, ranging from 3 to 8 tons in weight, random laid, thoroughly chinked and wedged with spalls, is expected to stabilize the face of the dam and smooth out the settlement considerably. Nevertheless it was thought that local settlements of considerable amount might occur, and the first design of the concrete pavement, therefore, provided for laying it in 8-ft. squares, articulated at the joints to transmit shear and yet give complete flexibility. A study of existing rock-fill dams showed, however, that such local settlements do not occur. Mr. Harza plotted the crest settlements of the Swift dam, near Valier, Mont., which is 160 ft. high above stream bed and 190 ft. above foundation rock, in the curve reproduced in Fig. 2, which reveals no local irregularities exceeding 0.3 ft., although the maximum settlement at midlength is 2¾ ft. Similar observations made at other high rock-fill dams indicated that the proposed extreme subdivision of the paving slab was unnecessary, and showed that the settlement might be expected to occur in an evenly distributed manner, generally proportional to the depth of fill at the point in question, so that only general flexure of the facing slab needed to be provided for.

Accordingly, the slab was studied as a continuous membrane or pavement, and while it was divided into rectangular panels 48x70 ft., by expansion joints, running down the slope and horizontally, these were provided for expansion and contraction rather than to give flexibility. Mr. Harza says:

Our slab is so designed that a general deflection of the entire face of the dam, considered as a beam uniformly

FIG. 1—HIGH ROCK-FILL DAM OVER DIX RIVER—RUBBLE, CONCRETE AND TIMBER FACING ON UPSTREAM SIDE

loaded, to the maximum amount of 10 ft. near the upstream heel, where the depth of fill is small, and increasing to a deflection of 102 ft. at the crest, where the depth of fill is about 275 ft., could safely occur without exceeding safe unit stresses in the slab, and local settlement in individual panels between the expansion joints spaced 48 ft. apart could occur to the extent of 1.73 in. near the bottom, increasing to 3.5 in. near the top, for normal working stresses in concrete and steel, and about three times this amount before failure of either. . . It is, therefore, believed that the flexibility of the concrete facing will be ample to accommodate any prospective settlement without exceeding safe unit stresses, either in steel or in concrete, and without resultant cracking and leakage of the facing slab.

The slab as built is 18 in. thick at the bottom and 8 in. thick at the top. It is reinforced with 0.5 per cent steel in each direction, located in the middle of the slab. The concrete was proportioned for a strength of 3,000 lb. per square inch in 28 days and was thoroughly tamped under top forms, which were built up not more than 1 to 4 planks (10 to 40 in.) above the concrete.

At the expansion joints, the abutting slabs rest on concrete ribs formed in grooves built in the slope-wall, and are joined to the ribs by U-shaped copper seal strips, above which the joint is filled with compressed cork. These ribs are 48 ft. apart horizontally and 70 ft. up and down the slope.

Timber Surfacing—As a further safeguard in the matter of water-tightness, the top forms of the concrete slabs were left in place, for the lower 160 ft. of height of the dam. Since the reservoir is intended for power use, it will not be drawn down below this

FIG. 2—CREST SETTLEMENT OF SWIFT DAM (AFTER NINE YEARS' SERVICE)

elevation while the plant is in operation, and the dam thus is in a different condition from storage dams for irrigation or water-supply purposes, which can be inspected from time to time by draining the reservoir. Since an upper form was necessary in any event for pouring the pavement slab, it was decided to build the form carefully and leave it in place permanently on the concrete, as an additional seal. Well-seasoned 3x10 yellow pine lumber, tongued and grooved, was used for the form. It was laid rough side down and bolted into the concrete. It is believed by the designers that this sheathing will swell to form a very tight diaphragm, as permanent or more so under water as the

FIG. 3—GATE TOWER, WITH 17-FT. CONCRETE PLUG VALVE AND HEMISPHERICAL FLOOD GATE FOR TUNNEL CLOSURE

concrete itself, and that it will form the first line of defense against seepage through the facing slab.

Each rectangle of the slab was poured continuously, as it was desired to have no construction joints except at the expansion joints.

Spillway—Ample spillway capacity was known to be vital. By locating the spillway in a rock cut through the hill on one side of the dam, and by utilizing the spillway excavation as the main material supply for the body of the dam, a very great spillway capacity

resulted. The channel has a capacity of 200,000 sec.-ft. or about 500 sec.-ft. per square mile of the drainage area (412 square miles), which is equal to a runoff rate of 18.75 in. depth per day from the entire drainage area. The maximum recorded flood of the Dix River within a record period of 13 years, however, is only about 28,000 sec.-ft., or 70 sec.-ft. per square mile.

Grouting—Three-inch grout holes of varying depths were drilled through the cutoff wall. The first series, Series A, were drilled 40 ft. apart, each hole being tested with water pressure and then grouted as soon as drilled. These first holes were drilled about 200 to 250 ft. deep, and the tests on them were used as a guide in determining the depths of subsequent holes. The second, or B, series, were drilled midway between the A holes; the C series midway between A and B, and the D series where needed midway between the B and C. The holes showed non-cavernous, fairly solid rock, containing occasional seams as in any rock foundation.

Outlet Tunnel and Tower—A tunnel through the side hill served for stream diversion during construction and will be used in part as a pressure tunnel to supply the turbines. The size was determined by the flood to be passed. Its section is 24x24 ft., horseshoe shaped, with unreinforced concrete lining; the high rock cover, nowhere less than 100 ft., was considered sufficient assurance against fracture and leakage of the lining.

To provide for control of the supply to the turbines, an intake tower is built over the concrete prolongation of the tunnel above the upstream face of the cliff; the concrete base of the tower is extended far enough upstream to provide for a portal, bulkhead, and permanent concrete sealing plug of the diversion, the intake shaft through the tower entering the tunnel just below the closure plug. The tower is a circular reinforced-concrete structure 22 ft. in diameter inside, but reduced to 17 ft. at the plug-valve seat near the base. Here a series of 12 ports is provided to admit water from the outside, passing downward to the 17-ft. shaft, arranged to be controlled by a huge concrete plug valve. The construction is clearly shown in Fig. 3. The plug of the valve is 17 ft. in diameter by 30 ft. high, and consists of a steel shell used as form, cast semi-steel sealing rings and seat rings, and a concrete filling. It moves vertically in a clearance of $\frac{1}{16}$ in. in the tower opening, comes to bearing on a 45-deg. seat at the bottom of the intake ports, and is simultaneously sealed by a compressible seal at the top of the ports. The plug weighs 575 tons, and is proportioned to resist a possible upward reaction of 480 tons, when the intake tower is used to full capacity for exhausting flood waters into the tunnel with full reservoir, under which condition the gate would pass about 16,000 sec.-ft., with a discharge through the ports at a velocity of 80 ft. per second.

Support is provided for the plug by a tubular stem consisting of a steel-plate pipe $\frac{3}{8}$ in. in shell thickness, 4 ft. in diameter, extending from the top of the tower down through the plug, and serving not only as stem but also as manhole and air vent to the tunnel. At the top, this stem is engaged by an oil pressure hoist, supplied by a motor-driven pump giving a normal pressure of 3,700 lb. per sq.in., which can lift the plug at the rate of 2 in. per minute (total lift, 76 in.). A small filling valve is also operated from the room at the top of the tower. A suspension bridge gives access to the tower.

FIGS. 4 AND 5—RESERVOIR BEHIND DIX DAM ON DAY OF CLOSURE (MARCH 17) AND TEN DAYS LATER

Exhausting the flood water through the gate tower was provided for as a safeguard in connection with the plan to begin impounding water in the reservoir before completion of the dam. The low flow of the river would otherwise result in considerable loss of time between completion of the dam and actual delivery of power from the plant. When the construction of the dam is so far advanced that the necessity for flood discharge through the intake tower has passed, three 8-ft. penstocks will be installed in the lower end of the tunnel, extending about 100 ft. in from the portal, where they will be bedded in a concrete plug about 35 ft. long.

Closure of Diversion—It was originally planned to close the diversion in a period of low water. The plan was to build a pipe some 6 ft. in diameter into the upper end of the diversion tunnel, with valves at the ends for closing the diversion at the desired time. The pipe would subsequently have been grouted full. This plan had to be abandoned when it became evident, last summer, that closure could not be made before the advent of winter floods, and that it would be necessary to make the closure during the high-water season. This required the development of a method of closure which could be carried out under a large flow through the undiminished portal of the tunnel.

At the same time, it seemed desirable to make some provision for reopening the closure bulkhead or valve later on, in case extreme flood conditions should so far exceed the discharge capacity of the ports in the intake tower that the rising water in the reservoir would threaten to overtop the uncompleted dam.

Fig. 3 indicates the method adopted. A closing bulkhead consisting of a hemispherical flood gate 26 ft. in

diameter at the seat was designed and built. This flood gate, consisting of a cast-steel sectional rim to which was riveted a plate-steel hemisphere, concave upstream, was hinged at its upper side. It was designed to withstand the entire head of water (225 ft.) over the center line of the bulkhead, or a load of about 4,000 tons. A frame serving as handle or lever was built against the upstream face of the valve, with its arm projecting from the lower edge of the valve at right angles to its face. The valve was held up and subsequently lowered by means of a hoist rope attached to the outer end of this lever, which made it possible to keep the valve under control and prevent its slamming to its seat in closing.

For emergency reopening on a 20-ft. diameter circle in the hemispherical plate body there is provided a circumferential double-butt-strap joint, having built into it between the butt straps a ½-in. copper tube. This tube extends out and upward to the top of the adjoining hill; after closure of the valve, the tube could at any time have been filled with nitroglycerine and the central part of the valve shot out, reopening the diversion tunnel for flood discharge. However, on March 17, 1925, the plug valve was lowered to closure, and storage in the reservoir began. Within the following month, and the passing of the early part of the flood season without extreme river stages, the emergency which dictated the reopening provision passed by, so that the feasibility of reopening the diversion tunnel will not have to be demonstrated by practical trial. The tunnel will soon be filled with concrete back of the flood gate, to form a permanent concrete closure plug about 20 ft. long.

FIG. 6—CLOSURE GATE READY TO BE DROPPED

Drawings accompanying the article of George P. Howson on the construction of the dam in our issue of April 2, p. 548, may be consulted in connection with those shown here. The methods of transporting and placing the rock of the dam fill and the stone and concrete upstream facing were also shown in that article.

The dam was built for the Kentucky Hydro-Electric Co. by the L. E. Myers Co., of Chicago, E. Collins, vice-president and general manager, and A. L. Nelson, superintendent on the work. Mr. Harza had the consulting assistance of Arthur P. Davis, chief engineer of the Bay County's water district and M. M. O'Shaughnessy, city engineer of San Francisco, who approved the design of the dam. Mr. O'Shaughnessy was responsible for the adoption of horizontal expansion joints in the concrete facing. George W. Howson was resident engineer on the work.

Much Road Improvement Under Way in Allegheny County

ROAD improvement aggregating 160 miles is planned by Allegheny County, Pennsylvania. Of the entire program about 100 miles will probably be completed this year. The ultimate cost of the work will be $8,000,000.

Money for this large improvement program was made available a year ago, when the voters of the county approved a bond issue of 29 million dollars for public improvements, of which 8 millions was allotted to road improvement as follows:

Construction of new county highways	$4,050,000
Reconstruction and widening of existing roads	1,162,000
Joint road improvements with boroughs and townships	1,088,000
Elimination of railroad grade crossings	800,000
Elimination and improvement of dangerous curves	500,000
Erection of safety barriers on public highways	400,000
	$8,000,000

The expenditure of these funds is in the hands of the board of county commissioners, through its department of public works. J. G. Armstrong is chairman of the Board. Norman F. Brown is director and Charles M. Reppert assistant director of the department.

The location of new roads in Allegheny County is recommended by the County Planning Commission, which consists of nine men residing in different sections of the county who serve without compensation, and which weighs both the practical and theoretical elements that affect the selection of road locations. A group of thirty engineers, under the leadership of E. L. Schmidt, which makes surveys and estimates of proposed new roads, furnishes the commission the technical data on the project. In addition, public hearings are held before the commission so that all groups of citizens interested in particular roads may express their views on the subject.

The commission also has had prepared a major road plan of the county, which represents the results of a comprehensive, high-plane viewpoint on the road system as a mechanism of communication and circulation of traffic, both as it exists today and as it is destined to exist in the future. With these data as a background; with the technical data on grades, alignments and costs submitted by the engineers, and with the intensely practical views and information developed in the public hearings, the commission is in a position to make well-balanced recommendations to the County Commissioners for priority consideration and final approval.

Included in the 160-mile program mentioned are new roads, reconstruction and widening of existing roads, curve and railroad grade crossing eliminations and state highway projects; also about 65 miles of road surfacing, which will be carried out by the road maintenance division of the Department of Public Works of the county.

Federal Aid for Drainage to Be Requested

Under a bill signed recently by Governor Baker, of Missouri, it is planned to request Congress to pass an act permitting the Department of the Interior to take part in the reclamation by levees and drainage of about 3,000,000 acres of swamp land in the southeastern part of the state. A commission to be appointed by the governor and to co-operate with an Arkansas commission and federal officials will study the flood conditions.

Wood-Grating in Filters and Cemented-Gravel Layer

Symposium by Five Engineers Giving Facts and Opinions Based on Experience and Observation at Various Test and Working Scale Plants

Corroborates Some Doubts Raised by Milwaukee Experiments

By J. W. Ellms
Engineer of Water Purification and Sewage Disposal, Cleveland, Ohio

THE conditions affecting the hydraulics of rapid-sand filter-underdrain systems are always of interest to engineers, and H. N. Jenks' paper on the wood-grating underdrains of the Sacramento filter plant in *Engineering News-Record*, April 16, 1925, p. 634, is a valuable contribution on this subject. The writer can claim only a little experience with this type of underdrains, but such as he has had leads him to believe that the statement made in the Report of the Experiments on the Purification of the Water Supply of Milwaukee by him was practically correct.

The experimental filter used at Milwaukee had an area of about 22 sq.ft. The space under the grid was 6½ in. deep. Into this space the wash-water was discharged through a 4-in. pipe with a tee on the end of the pipe. The effect of the tee was to shoot the water horizontally toward the sides of the chamber. The grid consisted of 1x6-in. boards set on edge and spaced 1 in. apart. The open area of the system was, therefore, 50 per cent of the total sand area.

It was unfortunate that a rate of wash had to be used that did not go above a vertical rise of 21 in. per minute at the beginning of the wash, and which often fell as low as 16 in. per minute toward the end of the wash. Nevertheless, the sand bed was always floated and good washing effects were obtained. The conclusions drawn from the operation of this type of underdrain system as stated in the report are as follows:

"In spite of the absence of trouble with this form of strainer, it is believed that had there been available a wash-water pressure which was capable of producing an upward velocity of 2 to 2.5 ft. per minute, the bed might have been "blown up" and ruined. What has not been established is the necessary depth of the gravel layer below the sand which will prevent a hole being blown through the gravel, thereby disrupting the bed. If high velocities through the gravel can be properly controlled by a sufficient depth and by proper grading of the gravel, it is believed that the grid will furnish a comparatively cheap, simple and effective type of strainer. Further experiments for the purpose of establishing the truth or falsity of the points noted above are necessary before it could be safely adopted for use in a large plant."

Mr. Jenks' experience with large filter units corroborates in a measure the doubts raised in the foregoing conclusion. It also to some extent confirms the disastrous results obtained in the first attempt to wash the large 12-m.g.d. filter units of the Louisville, Ky., plant as first designed and constructed. (See *Engineering Record*, Jan. 5 and 19, 1901, for original design, and June 1, 1912, p. 592, for the reconstruction.) In these filters the underdrain system consisted of two layers of wire cloth laid one above the other. Just what the area of openings was as compared with the total sand area of the filter bed is not known by the writer, but it must have been quite large.

There is little doubt in the writer's mind that air and water combined in the Sacramento filters would produce the violent eruptive effects described, and that the stratification of the gravel layers would be ruined as a result. Once these layers of gravel have been moved, it must produce wide variations in the frictional resistance offered by the gravel and sand, and consequent disruptions of the bed at points of least resistance.

It would appear to the writer that unless very low velocities are produced in the main channel before entering the separate water ways, and that, unless even in the latter the velocity head is negligible, uneven washing must result. Assuming that a minimum of velocity is effected throughout the space underneath the entire grid system, inequalities of flow must result the moment the water begins to pass up through the gravel and sand. Points of least resistance will thus become the channels of greatest flow.

The use of a cemented-gravel layer, even if reinforced to withstand pressure inequalities, seems to the writer to be seeking for a solution of the problem in the wrong direction. The easiest place to control the velocity head is in the strainer system and not in the gravel layer. A gravel layer only 13 in. in depth in the Sacramento filters seems to the writer far too shallow when using a grid system. Even with a perforated-pipe system, it is the writer's practice to use from 18 to 21 in. of gravel. The lower layers should be of fairly large size with a fairly uniform grading upward to the finer gravel at the top.

Without doubt a delicate hydraulic equilibrium must be established in the grid type of strainer system, if it is going to operate successfully. The question in the writer's mind is, whether the means necessary to establish such an equilibrium in design, and the exigencies that arise from improper operation of such a system are worth the effort, when other types of strainer systems have proved their efficiency and practicability.

Metal Distributors More Dependable Than Gravel

By Wellington Donaldson
With Fuller & McClintock, Consulting Engineers, New York City

THE departure of Baltimore and Sacramento from the conventional type of filter underdrain in general use during the preceding decade has been followed with much interest by those having to do with filter design and operation. This interest has been friendly instead of hostile because the new style of underdrain, if successful, has clearly outstanding advantages in the way of simplicity, ease of installation and construction cost. It would mean that the construction of filter underdrains would be taken away from the foundry and machine shop and given over to the carpenter.

While waiting for the results of a practical trial of the new underdrain, such as has been made available by Mr. Jenks, doubt has been expressed from various quarters as to the wisdom of discarding the older method of distributing wash-water by means of orifices in metal pipes or strainers and relying upon the comparatively light resistance of a carefully graded gravel bed to secure uniform distribution of the wash-water. It was felt by some that even if the carefully graded gravel bed could be built so as to give a uniform distribution, the later development of areas or passages of less resistance than afforded by the bed as a whole would result in a cumulative tendency of the wash-water to pass more readily through certain portions of the bed than others. Such views were expressed by Ellms, Daily and Metcalf in a discussion of the Baltimore experiences in *Engineering News-Record*, April 3, 1924, p. 563. The writer shares these views and believes that "metal" distribution is more dependable than "gravel" distribution. The gravel layer was first incorporated in filter design simply as a trap against sand entering the underdrains. Subsequent additions of graded layers of coarse gravel were for the purpose of combatting jet action incident to the use of larger orifices than the old strainers had. Apparently little consideration in this development was given to the possible function of the gravel as a wash-water distributing device.

One underlying reason in the writer's mind for favoring "metal" distribution has been the observed behavior of a number of filter installations embracing various types of underdrains. In the case of the once popular underdrain consisting of brass strainers screwed into the tops of iron lateral pipes there was a well recognized tendency of the end strainers to become progressively clogged resulting in unequal wash with its various attendant ills, such as banking of sand, dead areas and deep cracks. Even with the more modern type, consisting of perforated pipe or of strainers in a false bottom, it requires stoppage of only a few adjacent holes or strainers to produce poorly washed areas in the sand bed in spite of an adequate gravel layer and a comparatively high-velocity wash.

The Sacramento experience with wooden underdrains, as related by Mr. Jenks, seem to support the fears above expressed as to what might be expected in the absence of orifice distribution. The results are covered very well in his term "hydraulic instability," due to the slight resistance of the gravel layer. If, in order to make up for the shortcomings of this arrangement, it becomes necessary to install a different kind of orifice device consisting of a thick layer of loosely cemented gravel, and if further it becomes necessary to reinforce this layer with steel rods in order to secure it from failure as a slab, then this type of underdrain loses its principal attractiveness, which is simplicity and low cost. It is in a way attempting to do something which can with more certainty and reliability be done by multiple orifices of definite size in metal and definitely spaced over the bed area.

If porous slabs of cemented gravel are to be used it would seem more logical to anchor these slabs directly over the supporting false bottom and use over the gravel slab only a shallow layer of finer gravel as a trap against clogging by sand. An objection to the cemented-gravel layer yet to be answered is the possibility of its becoming clogged and the inability to overhaul without complete destruction and replacement of the slab.

Why is a very low resistance in the underdrain system especially to be desired? The additional head required to give orifice distribution is at most only a few feet, which is not sufficient seriously to modify provisions for supplying wash-water even when this water has to be pumped. Would the wash-water tank have to be materially elevated or would the additional head against which the wash-water is pumped constitute a serious item of operating expense?

In regard to the troubles from air entrainment mentioned by Mr. Jenks, it is not easy to see that these are related particularly to the type of underdrain discussed except that a false bottom provides more space for accumulation of air than is the case with underdrains of perforated pipe. In other words, air entrainment is due either to release of dissolved air under tension of the negative head or else to being drawn in through some opening or pipe connection under negative head. Air entrainment is undesirable in any type of filter and is to be combatted at the source rather than by modification of the underdrain.

A fair interpretation of the Sacramento experience is, that while these particular experiments have not been favorable to the type of underdrain discussed, the feasibility of the idea is not necessarily disproved. Nevertheless they indicate what may be expected unless an exceptionally well-graded gravel layer is secured, and unless the inlet arrangements for wash-water are provided in a manner conducive to uniform pressure under the false bottom. The difficulties of meeting these conditions are indicated in Mr. Jenks' statement that such small differences in head as 2 in. between ends of the distributing conduit have given rise to inequalities of wash.

We must remember that the Baltimore experiments with this type of bottom have been carried on for a considerable period with results at variance with those reported at Sacramento. For a correct judgment in this matter we need recent Baltimore observations presented in the light of the Sacramento experiences, so interestingly related by Mr. Jenks.

[Recent information from Baltimore indicates that the one filter equipped with wood-grating is operating as satisfactorily as the remaining filters, as noted in the adjoining discussion by James W. Armstrong.—EDITOR.]

Baltimore Experience With Slat Bottom Type Satisfactory

By James W. Armstrong
Filtration Engineer at Montebello Filters, Baltimore, Md.

I HAVE more than a passing interest in Mr. Jenks' account of the troubles with the slat-bottom filters at Sacramento, especially as I feel that the remedy is much simpler than the one he has suggested. Mr. Jenks stated that 13 in. of gravel and 34 in. of sand were used, but he did not tell how the gravel was graded. On looking up the Sacramento contract plans and specifications, which I presume were followed literally as Mr. Jenks' other figures agreed with them, I notice that in the four filters with the slat bottoms the gravel was 5 in. less in depth than in the filters where the perforated-pipe laterals were used. The specifications call for the following:

Layer	Screen Diameter or Opening, Inches		Depth of Gravel Layers in Filters 2-4-6-8 Slat Bottom	Depth of Gravel Layers in Filters 1-3-5-7 Perforated Pipe
	Passing	Retained Upon		
First, bottom	2½	1½	3 in.	6 in.
Second	1½	¾	3 in.	4 in.
Third	¾	¼	3 in.	4 in.
Fourth, top	¼	10 Mesh per in. No. 20 Wire	4 in.	4 in.

It will be noted that only a 13-in. depth of gravel was placed in the slat-bottom filters, where the gravel layer alone is relied upon for distributing the wash-water, and that a depth of 18 in. of gravel was placed in the filters with the perforated-pipe laterals, where the wash-water is evenly distributed before reaching the gravel layer. As the top 4 in. of gravel can only be considered as a coarse sand for supporting the finer sand, it only leaves a 9-in. depth of gravel to act as an effective medium of distributing the wash-water, a depth in my judgment not sufficient for the purpose.

I believe that the thin gravel layer in the slat-bottom filters at Sacramento is sufficient explanation of their trouble, and that if the depth of gravel in the two types of filters had been reversed, there might have been no trouble.

One other factor might have entered in slightly. The wash-water is admitted through four 5-in. holes into a narrow and shallow compartment at a velocity of a little over 3 ft. per second, when applied at a rate of 2 ft. vertical rise per minute. This rate would tend to decrease the pressure at the inlet and increase it at the opposite side where the water impinges against the wall. I believe that with a proper depth and grading of gravel there would be no necessity for a cemented-gravel layer as suggested by Mr. Jenks.

It may be of interest to those concerned with the design of filter-strainer systems to review briefly the history of the slat-bottom filters, as far as I am acquainted with it. In the latter part of September, 1918, I visited J. W. Ellms at Cleveland, Ohio, who was at that time about to start an experimental filter plant at Milwaukee. I asked him if he would be willing to equip one of his small experimental filters with slat bottoms and made him a sketch of the way I thought the installation should be made. He said he did not think very much of the idea but would be willing to try it, and he did. His second filter was of the perforated-pipe type.

In the report of the Milwaukee experiments, which appeared a little more than a year afterward, there was practically no difference in the performance of the two types of filters, but on p. 47 Mr. Ellms summed up his conclusions on the operation of experimental filters as follows:

"The wooden-grid strainer system also gave good results. Toward the end of the work an examination was made of the filtered-water well immediately under the grid in order to see whether sand had worked its way down through the gravel bed. None was found. Examination from above showed the gravel bed to be in good shape also. In spite of the absence of trouble with this form of strainer, it is believed that had there been available a wash-water pressure which was capable of producing an upward velocity of 2 to 2.5 ft. per minute, the bed might have been 'blown up' and ruined. What has not been established, is the

necessary depth of the gravel layer below the sand which will prevent a hole being blown through the gravel, and, thereby, disrupt the bed. If high velocities through the gravel can be properly controlled by a sufficient depth and by proper grading of the gravel, it is believed that the grid will furnish a comparatively cheap, simple and effective type of strainer. Further experiments for the purpose of establishing the truth or falsity of the points noted above are necessary before it could be safely adopted for use in a large plant."

I should not have requested Mr. Ellms to make the experiment in 1918, except for the fact that the city of Baltimore at that particular time was using a large volume of water, and we did not think it advisable to dismantle one of our filters for experimental purposes. As I was not satisfied with Mr. Ellms' report, we decided to use one of our existing filters for the purpose of giving the matter a thorough test. We cut off half of Filter 12 and after removing the strainer plates from the other half, equipped it with wooden slats. The portion equipped had a length of 53½ ft. and a width of 13½ ft. We put about 18 in. of well-graded gravel on top of the slats but on account of the height required for the slats and the extra depth of gravel, it was not possible to use more than 1 ft. of sand.

Wash-water was admitted through four 14-in. pipes, a deflector being placed over the outlet of each pipe. The deflectors were not wide enough to prevent a large volume of water from escaping directly upward against the slats. After placing the gravel, but before placing the sand, wash-water was applied at a rate of 5 ft. vertical rise per minute without disturbing the gravel layer. Afterward air was admitted to the wash-water pipe and underdrains, the tanks were filled with water and then the 24-in. wash-water valve was opened wide. A violent agitation of the filter surface occurred, especially over the inlets where the water rose to a height of about a foot above the surrounding water.

During the year 1923 we were troubled with the growth of organic matter on the sand grains which matted them together to such an extent that it was not possible to pass wash-water through a large area of the filter bed. At the points where the water did break through, it was at an excessively high rate. During this trying period, we had no evidence of the disturbance of the gravel or sand layer of Filter 12. Ultimately we got rid of this trouble by passing the sand through an ejector and sand-washing machine.

In 1924 a new trouble came upon us in the form of a large amount of dissolved air in the water, which was liberated in the sand beds and underdrains as in the case of Sacramento. There was no trouble due to a disturbance of either the gravel or the sand beds. These facts seem to strengthen my belief that the trouble at Sacramento is due to the causes previously stated.

I understand that St. Paul, Minn., built some filters with slat bottoms, but I have no knowledge as to the details of construction or the results of operation. In addition to the filters of this type now being built at Baltimore, a large plant is under construction for Washington, D. C., and the Baltimore & Ohio R.R. Co. recently awarded a contract for a small plant.

After four years of practical operation, part of the time under trying conditions and with only 1 ft. of sand above the gravel and with some undesirable structural features to contend with, we have every reason to believe that filters of the slat-bottom type are a thorough success and should no longer be considered as experimental.

Iron Ridge Block Diffusers and Wood Grating Used at St. Paul

By John W. Kelsey
General Superintendent of Water-works, St. Paul, Minn.

I HAVE read with considerable interest Mr. Armstrong's criticism of the wood grating in the Sacramento filters. At St. Paul iron ridge blocks spaced on 7-ft. centers are used to diffuse the wash-water; that is, the water through the underdrain system comes into contact with the cast-iron ridge blocks through 4-in. risers and then is diffused through ¾-in. horizontal holes in the cast-iron diffusers. The wood grating is of standard size, 1 x 6-in. fir boards, surfaced on all sides. These wood slats are set on edge and give a clear space between them equal to their thickness, which is a little under ⅞ in. In supporting them on the cast-iron diffusers, the grating boards are butted and not lapped. Our theory was that this would permit the water under the gravel to have plenty of areaway to assume a uniform pressure. The resistance that the water meets in passing through the gravel equalizes the pressure at all points beneath it, which we believed would give a uniform wash.

The gravel is 16 in. thick and the sand 27 in. The gravel is graded from ⅛ in. to 2 in. Each filter bed has a rated capacity based on 125 m.g.d. per acre of 3,500,000 gal. These filters, twelve in number, were put into service May 16, 1923. They have proved satisfactory and have been inspected by various engineers and filter operators from other cities, who endorse them as giving a uniform and satisfactory wash, with a rate of wash of 2 ft. vertical rise per minute. We have had no occasion to remove the sand or gravel and, therefore, have not been in position to inspect the condition of the filters or underdrain systems. Perhaps it would have been better to have used cypress instead of fir, but the cost was a great deal more. To date we have had absolutely no trouble in any way with the filters, and are, therefore, well pleased with the design.

This plant was designed by myself and L. N. Thompson, senior assistant engineer.

Cemented Gravel Slabs Satisfactory at Toronto and Elsewhere

By William Gore
Consulting Engineer, Toronto, Ont.

OPEN-BOTTOMED filters of which the wood grating, as described by Harry N. Jenks in *Engineering News-Record*, is a type, have never been adopted in the writer's practice, although its possibilities have been discussed from time to time, perhaps every time when cemented-gravel underdrains have been under consideration. To what extent the cemented gravel in practice would do away with the orifice restrictions we do not know but we have never had the courage to launch out without these restrictions. With drifting-sand filters, using loose gravel covering perforated-pipe underdrains, it was found that the gravel crept up the corners and sides of the filters and interfered with the working of the sand extractors, so that the adoption of cemented gravel by us came as a necessity and its success was such that we now use it in all mechanical filters combined with perforated pipes.

Cemented gravel in the form of slabs over channels forming the underdrain system of slow sand filters was in use many years ago at the works of the Companie General Des Eaux at Choisy le Roi, Paris, France, and the writer experimented at these works with the cemented gravel in a mechanical filter with perfectly satisfactory results. About eight years ago the same system was adopted at Ottawa, Ontario, and shortly after by Toronto and other places. In only one case, which was in South America, has the cemented gravel bed been known to be broken and this was under circumstances which appeared to indicate jolting of the filter, a process which cannot be too strongly deprecated.

An examination, recently, of a cemented gravel bed at Toronto disclosed the unexpected fact that the cement was being slowly dissolved by the water so that the bed, although sound, was more open than when placed, six years earlier. In this case limestone, amidst the more durable materials, may have contributed to the result. Our early fear was that the cemented gravel might tend to choke but experience shows that the reverse is the case. In the early examples the proportion of cement to gravel was 1 to 15 but this has now been increased to 1 to 12 and we have no fear now with higher proportions of cement.

The gravel used has been of clean, rounded pebbles which have passed through a sieve of three meshes, lineal, per inch and has been caught on one with five meshes per inch. After mixing in a machine with sufficient water to compact it, this mixture has been placed in a firmly rammed layer, 6 in. thick in one piece over the whole surface of the filter or filter compartment. The top is rammed but not rubbed. It is left with a relatively smooth, mottled

surface which, after setting, can be swept with a broom without injury. The cemented gravel rests upon a layer of loose gravel covering the perforated-pipe underdrains and is covered with 2 in. of coarse sand, caught on a sieve of 16 meshes per inch. Experience shows that this coarse layer of sand is an essential element in the design. It remains in place and the cemented gravel remains relatively free from the materials which choke up the upper layers of the sand bed.

In backwashing, whether with loose or cemented gravel, it is our practice to start very slowly, gradually increasing to full rate at about one-half the period of washing, then continue at this maximum rate—which is secured by a stopped gate—till the water in the filter begins to clear, when the rate is gently lowered to zero.

This arrangement has been found to be simple and entirely satisfactory. It was determined in the first instance by experiments on a filter with glass sides. The motions in sand while being backwashed are exceedingly complicated and must be seen to be fully appreciated. There are local uprushes of sand and water rapidly changing in form and place accompanied by slower and more widespread settlements. Horizontal zoning takes place with different grades of sand in each zone.

The trouble Mr. Jenks experienced from gas is not an uncommon one. It appears to accompany filtration when the raw water is saturated or nearly so. The gas is then withdrawn from the water by adsorption in the same way as colloidal materials are also withdrawn. If water has just been released from pressure the trouble is usually augmented. This phenomenon has also been studied in glass filters and it is found that the whole bed may become full of dry spots without the presence of negative head, and the bubbles rise from all depths of the filter as well as from the underdrains. We know of no method of stopping the trouble except more frequent backwashing.

Railway Trestle Practice in Queensland

Special Correspondence

A TYPICAL railway trestle used on the 3 ft. 6 in. government railways of Queensland, Australia, is shown by the adjoining view. It is built of eucalyptus, a hardwood abundant in Australia in many varieties. The eucalyptus furnish strong and lasting bridge timber for bridges. In calculating the moment of resistance of girders, a working unit stress of 2,800 lb. per sq.in. may safely be used.

Bridges such as the one pictured will stand for twelve years without giving the maintenance branch any anxiety, and the writer has dismantled similar bridges 35 years old that showed little trace of decay. These figures do not apply indiscriminately to all the eucalyptus, nor to all districts in Australia.

The track construction of the bridge shown consists of rails spiked direct to 9x4½-in. hewn ties or "transoms," 7 ft. 6 in. long, which are close-spaced and are in turn spiked to the 17-in. round dressed girders.

For spans of 12 and 14 ft. c. to c. of bents two girders are provided. As the girders are 5 ft. 6 in. apart, and the gage of the road is 3 ft. 6 in., the transoms are subjected to a bending moment, whose maximum is under the rail at a cross-section weakened by 2¾-in. holes for dogspikes. For spans of 16 and 18 ft. a third (central) girder is provided. Longer spans (when used) have girders doubled vertically.

The corbels shown over the bents, under the butt-joints of the girders, are an interesting survival of the days when strength of girders could not be calculated. The writer has been informed that they are intended to lessen the span and to lessen deflection.

The bents are generally of three piles each, outside piles raked 1 in 8, but the highest shown has four. The cap consists of two 9x6-in. hewn pieces 10 ft. long, bolted heart to heart, and mortised to receive tenons cut on the heads of the piles. The bridge is liberally supplied with holding-down bolts.

Piles are driven when circumstances permit, but are generally silled at a depth of 10 ft. The sill is an enormous timber, of least diameter 17 in. and of length equal to 10 ft. plus one-fourth height from sill to cap, and it rests on 6 in. of 1:9 concrete and is embedded in it. The outside piles are further bolted down to the sills.

The large amount of holding down is judged necessary on account of the sporadic heavy rainfall to which most Queensland waterways are subject. In the morning, after a fall of 3 or 4 in. during the night (no unusual occurrence), bridges are found with debris piled sometimes over the rails, while the stream may be nearly dry again.

Bridges of the type shown are presumed to be designed to carry an engine of 58½ tons weight, distributed thus: 12,880 lb. (5 ft. 10 in.), 12,880 lb. (4 ft. 5 in.), 26,880

TRESTLE ON GOVERNMENT NARROW-GAGE RAILWAY, QUEENSLAND, AUSTRALIA

lb. (5 ft.), 26,880 lb. (5 ft.), 26,880 lb. (4 ft. 3 in.), 12,320 lb. (5 ft.) 12,320 lb. The writer has no taste for calculations which can be avoided, but some younger engineers might find an interest in investigating such questions as the strength of the transoms in two- and three-girder bridges, the relative strengths of transoms and girders, the effect of the corbels when the bolts securing them to the girders have not been screwed up for three dry years, and the unit pressure under footings. The weight of the timber may be taken at 65 lb. per cu.ft.

The cost of these structures varies in different localities, but average costs are:

Hewn transoms, braces, etc.	$1.80 per cu.ft.
Girders and corbels	1.68 per lin.ft.
Piles	1.26 per lin.ft.
Sills	1.38 per lin.ft.
Concrete for sills, 1:3:6	17.28 per cu.yd.
Wrought iron	0.14 per lb.

Parts of the structure are painted with a fifty-fifty mixture of white lead and white zinc, and part with red oxide paint, at a cost of 48c. per sq.yd., three coats.

Since 1917, all railway construction work has been carried out exclusively by day labor under the government's own engineers. A cumbersome and costly system has been built up, under which the engineers have practicaly no control of the labor employed. All rates of wages are determined by a bewigged judge of an Arbitration Court, and many "disputes" such as arise when the engineer's directions do not meet with the approval of the gangs are solemnly investigated by an Industrial Magistrate. This sounds like comic opera or Munchausenisms, but it all is what Mark Twain once described as "the frozen truth."

Engineering in the Small City

A series of notes from the field on the Problems and Practices of the Municipal Engineer in the Cities Below 100,000

The Editor Visits the City Engineer

Snapshots of Our Representative Small Cities

Cairo, Ill.

LEVEE GATE, CAIRO, ILL.

COUNTY SEAT OF ALEXANDER COUNTY, the southernmost point of Illinois, at the junction of the Ohio and Mississippi Rivers, situated on a low, flat terrain behind levees where the flood waters from 916,700 sq.mi. of upland country flow by. Located at the southern end of the Meridian Highway. Strategic point of a break in freight rate for water and rail. Forwarding point for grain, lumber, cotton and tobacco. Hardwood products are the chief manufacturing interests. Gannister, kaolins, yellow ochre and cementing gravels are a few of the forty natural products of the county. Inhabited since 1750, but chartered as a privately owned enterprise in 1818, it was not a free city with right to govern itself until 1857. From 1818 to 1854 no resident owned a foot of ground. Population 1922, 17,000.

WHEN Charles Dickens visited Cairo and other cities in 1842 on his American trip as secretary to a group of English capitalists he was not particularly complimentary of any city. Going by steamboat from Cincinnati to St. Louis down the Ohio and up the Mississippi he was not much impressed with any of the bank scenery and proclaims in his *American Notes*, "Cairo is a spot so much more desolate than any we had yet beheld, that the forlornest places we had passed were, in comparison with it, full of interest." Perhaps the lamentations of the bankers he was accompanying whose money had been sunk in the promotion of this privately owned enterprise, a scheme enriching the promoters only, had an undue influence on Dickens' mind. That was 83 years ago, but Dickens' description of the location and obstacles with which the engineer had to contend is necessary to give proper background for the Cairo of today. Looking at it now we might say that almond-shaped Cairo lies snug between levees like a nut in a curved cracker. But let Dickens picture the location:

"At the junction of the two rivers, on ground so flat and low and marshy that at certain seasons of the year it is inundated to the house-top, lies a breeding-place of fever, ague, and death; vaunted in England as a mine of Golden Hope, and speculated in, on the faith of monstrous representations, to many people's ruin. A dismal swamp, on which the half-built houses rot away; cleared here and there for the space of a few yards; and teeming, then, with rank unwholesome vegetation, in whose baleful shade the wretched wanderers who are tempted hither, droop, and die, and lay their bones; the hateful Mississippi circling and eddying before it, and turning off upon its southern course a slimy monster hideous to behold; a hotbed of disease, an ugly sepulcher, a grave uncheered by any gleam of promise; a place without one single quality, in earth or air or water, to commend it: such is this dismal Cairo."

Was there ever a more tempting problem to solve by the hardy pioneering engineer of that or any other day? So hopeless it seemed, yet George F. Dewey, present incumbent of the city engineer's office, says flood water has not been in the city since 1858, a bare 16 years after Dickens viewed it. Cairo is completely surrounded by levees which also inclose the Cairo Drainage District. A cross levee carrying railroad tracks at the north city limits separates the two areas. An enormous flood gate in this levee was designed and built by Major C. H. Miller, who lost his life in the Memphis boat-disaster. It spans Sycamore St., the only connection to the north between city and district, so that in event of failure of the levee in one the other may be completely shut off.

Cairo's Low Level—Water, low ground, sand boils, seeps and levees are the principal physical features with which all engineers in Cairo from Dickens' day to this have at times had to contend. First of all the levees themselves had to be raised. When the rivers are up, all structures must rest on a water-logged subsurface. Forever must the remover of earth remember upward pressure when either river is high. Excavation or borrow pit—and earth for levees and to mound up places on which to build must be obtained—is almost sure to become a point of weakness where sand boils develop. Sand boils and seeps are the bane of the levee man's existence, breaking out unexpectedly at the height of a flood when nothing effective can be done. Temporarily, fighters sometimes build a ring of sand bags around the boil and raise the water level so that the infiltration will be reduced below a silt-carrying velocity.

Trenching then, for water, sewer or utilities must be handled carefully, carried on only in low-water periods. Backfilling must be done properly. When excavators encounter tree roots, as they often do, hundreds of years old, all the branch roots which have penetrated the water-bearing sand stratum must be removed. Sand puppies like to eat these roots, which would probably not decay under water. They follow the roots down to water where they hibernate in nests, sometimes 10 ft. across, until the next high water.

It is highly essential that the bottom of excavations be mulched or puddled to break up any direct tubular connections to a water-bearing stratum. Luckily plenty of clay of all kinds is available. In fact, fullers earth, potters clay and kaolins rivaling those of Europe and New Jersey have recently been located in the vicinity of Cairo and find a ready market.

While Cairo has not been under water in 67 years the floods of 1912 and 1913 breached the levee of the Drainage District to the north and cut the town off from land communication for many days. Recognizing the danger, more than a million dollars was raised for levee strengthening and repairs. Of this the railroads gave $368,000; the Drainage Board, $175,000; city, $100,000; U. S. government, $250,000, and state of Illinois, $250,000. Prior to this time about $1,500,000 had been expended by all interests combined. Cairo then has a security investment of $2,500,000.

City Engineering—For handling the engineering of this city (except the water-works) one man is responsible, George F. Dewey, city engineer, who has offices above the principal commission house on Ohio St.

overlooking the wide-paved levee slope down to the floating docks on the Ohio River. Beyond are the green hills of Kentucky and in the foreground the concrete levee wall with its ever mindful stop-plank openings. Dewey is master of the situation. He gazes out over the river with love as well as respect and perhaps at times hate. It is a typical surveyor's office with its pigeonholes for the thousand and one plats which are the surveyor's stock in trade. Dewey knows his business and the townspeople respect his knowledge.

Cairo has a commission form of government. D. M. Kelly is the commissioner of streets and public improvements and Dewey is responsible to Kelly but does all the engineering work there is to do under the other commissioners. For instance, Mike Egan, commissioner of public health and safety, called on him for handling the construction of the 10-ton garbage incinerator which as viewed, and smelled, in May was handling its quota without odor or offense. Every other day service is rendered and lately 4 of the 8 tons of coal formerly used annually is saved by feeding more than half of the garbage collected to hogs of farmers. "A fat horse burns itself but it takes a ton of coal for a skinny one and chicken manure is the hardest stuff to burn," are two bits of practical wisdom the superintendent passed out.

Principally, however, Dewey is concerned, as is every other city engineer, with paving and sewer problems. Novaculite, the natural product of southern Illinois which cements well and makes a good macadam road, has the drawbacks of all macadam under motor traffic. It is used extensively in the side streets of Cairo. A 1-in. covering of rock asphalt has been tried with success recently. Brick covers the principal streets, brick on a concrete base. Some of the old brick that has worn uneven has been patched—rather, evened up effectively with the rock asphalt at slightly over $1 per square yard. Rock asphalt costs $11 per ton in Cairo but so many companies are producing it that the prices are responding to the competition.

Sewers—Troubles with pavement, as they are with the sewers, are bound up largely with the seepage water and boils. During the spring flood stages in the rivers everything has to be pumped over the levees. The operation may suck into the sewers the water-logged silt surrounding them until a large cavity results. The sewer drops into the hole and so does the pavement. Again seeps may so soften the subgrade that the foundation gives way. There is no remedy except to excavate down to the sand strata, fill in with a puddle blanket and replace the sewer.

Much difficulty has been encountered from the manner of operating the drainage pumps. No regulators are provided. Suction is lost and water hammer ensues which tends to collapse the sewers.

Sewers now built, over 30 in. in diameter, are of monolithic concrete. Under this size they are usually of clay pipe. Unusual caution must be taken to make tight joints and the foundations now called for are a slab of concrete on piles. Backfilling must be done carefully, either in layers, if by hand, or by flooding, if by machinery, as is the more recent practice. Deep excavations must settle for a year before pavements are laid.

Since the sewage must be pumped, one naturally would feel some unusual interest in the pumps, but Mr. Dewey dismisses them with little comment. Simply motor-driven centrifugals, which are not automatically controlled, or equipped with remote-control apparatus. Attendants in shifts man the five stations. Lately the lines have been carried through the levee bank and down the outside to regain by siphonic action as much head as possible.

Financing, as in all Illinois cities, is done largely under the special assessment laws of the state whereby costs of benefits and injuries are spread over the areas affected.

Floods and Drainage—In 1922 C. E. Smith, consulting engineer, St. Louis, made an exhaustive report on the flood and drainage problems. In it he brings out that the trouble from seepage and boils comes from water totally different in chemical character from the water in either river. The ground water carries about four times as much solids as the river water. But this ground water, though it may come from a gathering ground miles away, still is influenced greatly as to elevation by the get-away possible into the rivers. Hence river heights affect the ground-water levels but there is always a lag of several days.

Some of Mr. Smith's conclusions are pertinent. While no floods have overtopped Cairo's levees in 67 years, levee work downstream may raise levels at Cairo. Simultaneous flood crests from the tributaries of the Missouri, upper Mississippi and Ohio Rivers have never yet combined at Cairo and the probability, in his opinion, is considered too remote to be given thought. Vigilance in protecting the concave banks along both rivers is absolutely vital to Cairo's existence. Filling low areas to prevent inside slopes from sloughing at flood time as a result of seep water standing against the base is recommended. This is being done gradually. Here and there through the town will be seen one lot or a series of lots in the poorer districts 4 ft. lower than the others. Most streets are up to a so-called minimum grade. To fill all areas inside the city will require 3,150,000 cu.yd. and within the Drainage District another 1,250,000 cu.yd. Mr. Smith recommended that the city buy an electrically-operated suction dredge and pump in material from the Ohio River bars at an estimated cost of 15c. per yard. This has not yet been done. The bars are across the river and a pipe line hung on the Illinois Central bridge would carry the material into town.

Like most city engineers, Mr. Dewey is on good terms with bankers and the big men of the city. A knock after hours, on the side door of the main bank in town was successful in bringing his visitors to the inner office of the president who laid aside his balance sheets for the day and spent nearly two hours in outlining the advantages of the city and Alexander County. One of the things he was most proud of was a cabinet containing forty samples of natural products including gannister, kaolin, yellow ochre and cementing sand for road material. Interested in several utilities he detailed the difficulties of the water company which had offered a few years back to finance a new works if a franchise were forthcoming. None was given but, he said, by the help of chlorine, the old filters and a loyal crew, a potable, safe water is being purveyed. Had the problem been left to the banker and Mr. Dewey, the company would have its franchise or the city would take over the plant. So the day was closed and on the Chicago sleeper reflections painted one more city engineer having the time of his life and succeeding not in money

returns but in filling a place in American small-city life, respected by his fellow townsmen and doing the day's work as it came to him.

Formwork for Large Sewers on Short-Radius Curves

By J. C. Keeley
Engineering Department, City of Paducah, Ky.

A CONVENIENT method of building large monolithic concrete sewers on 50-ft. radius curves was used in Paducah, Ky., in the construction of a $650,000 sewer system completed last year. The sewer is in a 96-in. semi-elliptical section built over standard steel forms, each form section being 5 ft. in length. In constructing the invert the chords on the inside of the curve were made 5 ft. in length to conform to the length of the steel arch forms, the chords on the outside being 5.87 ft. in length. Fig. 1 shows a plan of the invert.

After building the invert for the full length of the curve, the arch forms were unbolted and pulled ahead on a truck provided for this purpose and the forms set up on the curve, the side of each 5-ft. section fitting the inside chord of the invert previously constructed. The form sections were bolted with one or two bolts near the spring line on the inside of the curve and permitted to spread, to accommodate the curvature. After the forms were properly aligned and braced, spacers of wood 2 in. in thickness and of varying length were driven between the sections to keep them apart and to aid in bracing. Sheet metal of triangular shape was then placed over the space between the form sections and tacked down to the wooden spacers. Concrete was then poured.

After sufficient time had elapsed to permit removal, the forms were lowered by means of jacks, mounted on the form truck and the form moved ahead and reassembled on the tangential portion of the sewer. Fig. 1 shows a plan of the arch forms as assembled.

As the centers of the curves were generally inaccessible, the curves were staked out with a transit with chord lengths on the center line such as to give a 5-ft. chord length on the inside of the curve. On a 50-ft. radius curve this center line chord length was 5.43 + ft. The points on the curve were then referenced by means of stakes set radially and at certain offset distances, so that after excavation the points could be set again by the use of a chalk line and tape. Fig. 1 shows the method of staking out the curves.

Engineering Work

FIG. 2—FORMS IN PLACE ON 50-FT. RADIUS CURVE
The white strips show how triangular sheet metal bridged gap between steel form sections.

Street at Two Levels Serves Sidehill Residence Property

IN LAYING hard surfacing on a section of Denver Ave. from Bellevue to the block overlooking the James River, the city engineering department of Lynchburg, Va., devised a street layout particularly adaptable to sidehill property.

The section of Denver Ave. given this treatment has a difference in elevation between property lines on the two sides of the street from 4 to 12 ft. The street dead ends at the bluff overlooking the James River.

TWO-STRIP PAVEMENT FOR SIDEHILL ST.

Of the Small City

A continuation of the single roadway constructed in the upper section of Denver Ave. would have necessitated a grade line which obviously would be damaging to the property on one side or the other, or possibly both. Therefore, two 12-ft. concrete roadways 475 ft. in length, separated by a 9-ft. wide parkway but connected at each end, were constructed on independent grades. An 18-in. concrete curb and gutter on one side of each pavement slab added virtually that amount to the driveway width. On the upper side granite curbs were placed to support the steep sloping parkway. A short stretch of roadway on a 14 per cent grade was made rough by corrugation of the surface, this as an aid to traffic.

Building Sidewalks to Eliminate Slipperiness and Glare

By William E. Barker
Chicago, Ill.

In *Engineering News-Record* for April 30, 1925, an article appeared describing methods of eliminating glare and slipperiness from concrete walks. For walks which have the nearly obsolete steel trowel finish the acid wash described is effective. There is, however, no reason why new walks should need any such treatment, for they can easily be built with a surface of any desired texture.

The modern concrete walk is usually built in one course, using concrete of the same proportions from top to bottom, instead of having a lean base and a rich mortar top, as was previously the custom. Such a walk is not only stronger than the two-course walk but is also cheaper, because labor costs are less. It was the rich mortar top in the old walk which, when steel troweled, became slippery. The surface of the one-

CONCRETE CLEATS ON STEEP STREETS
Surface roughened by a roller. This street is in Seattle, Wash.

course walk contains more sand and, when a board float is substituted for the steel trowel for finishing, will have a gritty surface which is slip-proof in all weather. This grittiness is increased by using relatively dry concrete and by a final floating after all water has evaporated from the surface.

On steep hills or sharply inclined cross walks the concrete may be further roughened to provide a more secure footing in icy weather. This can best be accomplished by "patting" the surface with a wood float. The blow should not be hard enough to make a depression; the result is secured by lifting the float vertically, so that a little mortar is pulled up by the rising board, to form ridges like the mountain ranges of a miniature

SURFACE ROUGHENED BY PATTING WITH WOOD FLOAT
This is a concrete walk on one of Omaha's steep streets. The pencil shows the size of the elevations.

relief map. On very steep hills concrete cleats may be cast along one edge of the walk for winter walking.

Light reflected from sidewalks is caused by the light color of concrete. Anything which darkens the concrete will reduce the reflection. The first expedient is to keep the walk wet for at least a week after it is laid. Dark colored concrete may be secured by using dark colored aggregate such as red or black sand and stone.

Darker concrete may also be made by the admixture of various pigments. Only mineral colors should be used. Red iron oxide is the most popular. When two or three pounds is used for each sack of cement the concrete walk will have a delicate and pleasing shade of pink. The additional cost for coloring should not be more than one cent per square foot. About the same quantity of manganese oxide will produce a slate gray walk especially adapted to business districts.

Resurfacing Worn-Out Brick Pavements

Referring to an article in *Engineering News-Record*, June 4, p. 932, on the practice of the city of Jamestown, N. Y., in salvaging old brick pavements, Thomas H. Mather, city engineer of Syracuse, N. Y., has the following to say:

"For the past three years, in resurfacing brick pavements, we have adopted the method of grading the regular surface of the brick pavement with binder and laying thereon a 2-in. top of topeka. This leaves the brick undisturbed and thoroughly compacted under traffic and we have regarded this as the most valuable foundation which we could procure.

"Cortland Ave. was resurfaced in 1922 at a cost of $2.13 per square yard and shows at this date a perfectly smooth surface. In 1924 pavements were laid on five streets at the following costs per square yard: $1.55, $1.65, $1.67, $1.77, and $1.85. We believe we are getting a better top than by relaying brick and at a much less cost."

Letters to the Editor

This department aims to be a forum for the discussion of the views of engineers and contractors. The range of interest should be as wide as possible. Contributors are, therefore, asked to make their letters short.

Flow Losses in Large Pipes

Sir—The data given by Fred C. Scobey in his article upon Flow of Water in Tulsa 60-in. and 54-in. Concrete Pipe Line in *Engineering News-Record*, May 28, 1925, p. 894, are extremely interesting and significant. Those relating to loss of head in bends are particularly interesting to the writer as a possible confirmation in part of the conclusions summarized by him in an article upon Effect of Curvature upon Flow in Open Channels, *Engineering News-Record*, Sept. 29, 1921, p. 516. While the application of data obtained upon flow in closed pipes under pressure to flow in open channels is uncertain, lack of sufficient data relating to the latter condition is such that it seems desirable to utilize everything which may be significant in this connection.

The conclusion reached by the writer was "that in artificial channels for which the coefficient n in Kutter's formula would not exceed about 0.025 for a straight channel, an addition of from 0.003 to 0.005 should be made to the coefficient for sections in which the amount of curvature is considerable."

The excess loss of head due to curves and bends is probably due largely, if not wholly, to a disturbance in flow conditions by which the thread of maximum velocity is deflected nearer the outside of the curves and the velocities of the filaments in contact with the wetted perimeter in this portion are correspondingly increased as compared with those obtaining when the flow is in straight lines. This probably results in a considerable increase of the average velocity of the filaments in contact with the surface of the conduit and consequently in increased frictional loss, while the mean velocity may remain unchanged. This condition exists in closed conduits as well as open channels. If it were possible to estimate the increase in velocity of the filaments in contact with the surface of the conduit, it might be possible to compute theoretically the increased resistance due to the change in direction, especially if the length of conduit in which the disturbing condition exists could be accurately determined.

The changes in direction in the Tulsa aqueduct being made by bends rather than curves, this theory can be applied only by assuming the distance in which disturbed condition of flow exists. Even if regular curves had been used, however, it would still be necessary to estimate the distance beyond the curve in which disturbed condition of flow exists.

Mr. Scobey shows that the value of n in a section 34,788 ft. long containing 29 bends, was 0.0111, while in a section 80,898 ft. long, classified as slightly sinuous, but containing six bends, the coefficient was 0.0107, an excess of 0.0004 for the section containing a number of bends. If it be assumed that the disturbed condition of flow at each bend extended for 100 ft., then the portion of the section affected by the disturbing conditions was about one-twelfth of the total length and roughly the increase in n in the portion affected by the bends may be taken as 12 times 0.0004 or 0.0048.

If the disturbed condition at each bend be assumed to extend 200 ft., the increase in the value of n would be 0.0024.

Such a method of estimation assumed that increase in frictional loss is directly proportioned to increase in the value of n. Within the limits considered, this is approximately correct as may be shown by computing the value of n for the entire section on the assumption that in the straight portions it may be taken as 0.0107 and in the sections where disturbed flow exists at 0.0155 (= 0.0107 + 0.0048). This computation gives n for the entire section as 0.0113, compared with 0.0111 from test data.

This analysis seems to confirm, as far as it goes, the writer's previous estimate of the excess loss of head in bends quoted above.

HARRISON P. EDDY,
Consulting Engineer.

Boston, Mass.

Drains Under Earth Dams

Sir—The failure of the French Landing Dam, as described in *Engineering News-Record*, April 30, 1925, p. 735, leads me to some comparisons between this structure and the earth levees built along the Mississippi and to consider the desirability of attempting to underdrain such embankments.

The French Landing Dam, as described by the designer, Gardner S. Williams, appears to be a bold section when compared to such levees. In a dam over 30 ft. high without core wall, slopes of 2½ and 2 to 1 seem to me to be insufficient when the crown is only 8 ft. wide. On the Mississippi a levee of 30 ft. with an 8-ft. crown would have a base of over 250 ft. against 143 ft. in this dam, and the presence of a berm on the slope would distribute the mass nearer the base. The method of construction would be the same except that the levee would have a cutoff trench along the center line, and while the levee is built of more pervious material on a more or less pervious foundation the water does not stand against it long enough to saturate it as is the case with a dam. I am of the opinion that slopes of 3 to 1 both sides, with an 8-ft. crown, or a 2½ to 1 upstream and 3½ to 1 downstream, without drain pipes, is the least safe section for this dam.

Open drain pipes is an idea borrowed from the inspection galleries of concrete dams and erroneously applied to earthwork structures. Why build a dam to restrain water and then install drains to conduct it through—bringing part of the dam with it? Ordinarily concrete cannot be made seepage proof and there is upward pressure to be cared for, but an earth dam will take care of upthrust itself and drains only aggravate the flow by reducing friction.

The presence of a salient angle in the dam may have been necessary but at this point the ratio of wetted perimeter to mass of dirt was greatest and it was here that the dam failed. Our old friend the line of least resistance.

This with numerous other earth dam failures over the country brings home the fact that this seemingly simple problem in design is not to be dismissed lightly.

ALLEN T. BLYTHE,
Resident Engineer, Yazoo-Mississippi Delta Levee District.

Sherard, Miss.,
June 15, 1925.

[This letter was submitted to Mr. Williams who has replied as follows—EDITOR.]

Sir—Considering separately the two points brought up in Mr. Blythe's letter:

First: As I have had no experience with materials used in levee construction, and appreciate the difference between building a structure to withstand the forces of a rapidly flowing stream, and one designed merely to hold back quiescent water where the only eroding influence is a moderate wave action at the surface, I have never ventured to express an opinion as to the propriety of the accepted designs for the former, but in the light of such experiences as I have had it does seem to me that by properly draining the levee embankments a large reduction in cost with an increase of stability might be secured.

Second: When I developed the drained embankment, and so far as I have been able to discover I am the first one to make use of it, it was not borrowed from the inspection galleries in concrete dams, which at that time were at least not common, but was arrived at as a result of my studies of slow sand filtration, and experiments upon the compacting of earthy materials by the passage of water through them, covering some fifteen years. Several years after I had begun using drains in embankments, the late Frederick P. Stearns, past president of the American Society of Civil Engineers, in discussing with me the construction of his famous North Dike at the Wachussett Reservoir remarked: "Any dam of porous materials is a filter and should be so treated." In the ordinary earthen embankment (see sketch) the line of saturation extends from the upstream water surface to the level of water at the downstream toe of the embankment. If this latter level be at the surface of the ground we have the condition of over 80 per cent of the bank being saturated material and only something less than 20 per cent resting upon it unsaturated. If underdrains be introduced beginning with a header along the center line of the bank and sufficient capacity be provided to carry away the water percolating to it, we then have the same bank with less than 50 per cent saturated and over 50 per cent dry. As the coefficient of friction of

saturated earth is much less than that of dry earth the stability of the bank in the latter condition is seen to be very much greater than it was in the former.

I have been using the drained embankment in all of my hydraulic constructions where embankments were involved for the past fifteen years, with slopes varying from those at French Landing to a 1 on 3 and a 1 on 2½, and all my structures are standing, and the washout at French Landing is the first failure that has occurred on my work, which covers some 35 years of practice.

Several years ago I was called to northern Wisconsin to inspect an embankment constructed wholly of sand, about 35 ft. in height. The water was about 10 ft. below the flow line and the bank was so saturated that the downstream face was sloughing off for a distance of 15 ft. above the

SATURATION CONDITIONS IN DRAINED EARTH EMBANKMENT

toe in places. I immediately had underdrains of V-shaped board troughs—timber being the only material promptly available—worked into the base of the dam as far as it was possible to get them, probably about half way to the center line, and by draining the water out of the downstream portion of the bank restored its stability; the sloughing stopped and inside of sixty days the full head of water was against the bank, and without added material the structure has performed its function for some twelve or thirteen years.

When the water is first raised against a drained embankment the drains usually flow from one-half to three-fourths full, but inside of a week the flow begins to decrease and by the end of a few months, even with the most porous sand, the drains become almost dry.

Probability Methods for Rainfall and Runoff

Sir—In *Engineering News-Record*, May 28, 1925, p. 906, is a letter from S. L. Moyer, entitled, Probability Methods for Rainfall and Runoff, in which he argues for the propriety of estimating frequency curves for excessive rains or flood flows by using as essential data the maximum rate of rainfall or maximum flood flow in each year of the series covered by the records, omitting all secondary maxima even though they may be materially higher than the maximum for some of the other years.

It seems to the writer that the question relates primarily to what is desired from the probability study. If we merely wish to know in what percentage of the years certain occurrences are likely without reference to the number of times in a year, then the method recommended by Mr. Moyer is appropriate. If, on the other hand, we wish to know the probable total number of occurrences in a given period of years, or, what is the same thing, the average frequency of occurrence, then the omission of secondary maxima in particular years may lead to erroneous results. By including all the floods above a certain rate, we may find five occurrences in a 20-year record showing an average frequency of occurrence of once in four years, and yet we may find that all of these floods occurred in two years showing that they occur in but 10 per cent of the years.

For designing conduits for flood water, it seems to the writer that the number of cases in which flood damage may occur is of greater significance than the number of years in which there may be such damage, and that the method of analysis by which all of the occurrences above certain values are considered, no matter how many occur within a single year, is of more significance than the one recommended by Mr. Moyer.

Disposal of Excess Activated Sludge by Digestion

Sir—I am much interested in the paper by Dr. Karl Imhoff on "Disposal of Excess Activated Sludge by Digestion," read before the American Society of Civil Engineers on May 20 and abstracted in your issue of June 4, p. 936. With Dr. G. G. Nasmith the writer carried out experiments some years ago at the Toronto sewage-works which demonstrated, as Dr. Imhoff now has again demonstrated, that activated sludge could be satisfactorily digested if inoculated with ripe decomposing sludge. This fact was published in the *Canadian Engineer*, Feb. 3, 1921, and fuller details of our experiments are given in the issue of that journal for June 16, 1925. Our experiments extended through several years and were completed in 1920. We had hoped to introduce a plant on a practical scale based upon our discoveries in this field ere this, but the opportunity has not presented itself.

To us the most important discovery we made was that by inoculating the fresh sewage before activation the resulting activated sludge, if allowed to stand, would decompose rapidly without offence, yielding a sludge with the characteristic tarry odor and possessing the good drying qualities of the well-known Imhoff sludge.

As our scheme went much further than sludge digestion it will be best understood by reference to the accompanying sketch. The essential detail was a tank with three compartments through which the sewage passed in series. At the beginning, in the first compartment ripe digested sludge from an Imhoff tank was placed and the sewage to be treated was fed into the bottom of the compartment, passing upward through the sludge into the space above where the mixed sludges from the inoculated sewage settled out and the sewage then passed over a submerged weir into

EXPERIMENTAL APPARATUS FOR DIGESTION OF SLUDGE AND EXCESS ACTIVATED SLUDGE

the second compartment where it went through the process of activation and from thence to the third or settling compartment in the form of a spout. The arrangement was such that the transfer of sludge from the settling compartment to the activation compartment and from the activation compartment to the digestion compartment took place automatically. The amount of sludge maintained in the activation compartment was found to vary inversely with the depth of the liquid over the submerged weir. After a permanent régime had been established the sludge in the digestion compartment consisted of fresh sludge, digested sludge and activated sludge intimately mixed, but we found that no matter where sludge was taken from the apparatus, it would digest in the best way possible even in small quantities contained in a small glass cylinder.

A mechanical difficulty we experienced was the extraordinary rate of gas formation; Fig. 3 of Dr. Imhoff's paper shows the same phenomenon in his experiments where activated sludge, fresh sludge and digested sludge were mixed. From the point of view of obtaining gas for power without long periods of digestion this is a very desirable combination, but in our case we found that, unless the digesting sludges were continually stirred, the level of the liquid in the compartment would rise as much as 3 in., suddenly ejecting large quantities of sludge into the activation compartment which introduced difficulties of settling and occasional throwing of sludge from the settling spout

into a catch pit which was necessary in order that no sludge should be carried away.

The effluent was clear and straw colored, containing an increase of an average of about 70 p.p.m. of dissolved solids, showing that a considerable proportion of the solids dissolved and that very little sludge accumulated during the two years continuous operation of the plant. A typical average chemical result is expressed in parts per million as follows:

	Free Ammonia	Albumenoid Ammonia	Nitrates	Putrescibility
Fresh sewage	10.1	4.1	1.1	30
Outlet of digestion compartment	10.1	5.0	1.3	30
Effluent	1.5	0.7	16.3	100

The air used was 8 cu. ft. per gallon of sewage with a depth of 7 ft. in the activation compartment and the total volume of the apparatus was 12 hours' supply.

We believe the idea of digesting the whole of the sewage, as well as the sludge, carried out in our experiments has distinct possibilities because of the absence of smell, the small amount of sludge collected, the good drying qualities of the sludge and the high purification secured with a relatively small amount of air.

It is clear that the experimental work of Dr. Imhoff in developing a sludge with the novel and valuable properties described has confirmed the results independently discovered by us during the years 1916 to 1920 at Toronto.

A Plea for Work for Rehabilitated Veterans

Sir—I have read with considerable interest the appeal of the Director of the United States Veterans Bureau to the engineers of America for them to employ ex-service men wherever possible. As a major disabled man myself, with a college degree obtained before enlisting, perhaps the results of some intimate knowledge of the subject may be of interest to the readers of *News-Record*.

In the first place, regardless of how well a man stood in college, regardless of what his technical qualifications are, if he has not had that bugaboo called "experience" the engineering profession shuns him. Furthermore, if a man happens to be so fortunate as to get a contact with an engineering firm without letting them know that he is disabled, the result is that as soon as the firm is apprised of his physical condition, there is a softening of the voice—if the matter is conducted over the telephone by an employment agency, for example—or there is a suspension of the correspondence, rather abruptly, if the matter is being handled by mail.

This is not just my personal experience but as a member of the only organization in the United State composed of major amputations, the U. S. World War Amps, I say that the comrades with whom I come in contact inform me of the same thing. One man says he was with the largest utility in the world before enlisting. However, now that he wears an empty coat sleeve, they will not listen to him and he is engaged in the Veterans Bureau trying to help find a job for the other fellow. But American industry is not alone in the matter by any means. The United States government is acting hypocritically when it appeals to the industries of the nation to help men and then turns them aside from the Civil Service Commission because of the desire to favor political allies. The very man who was mentioned above told me he had to get a Presidential order to get where he is with the Veterans Bureau. The Civil Service of the United States is supposed to help an ex-service man by giving him preference. I say without hesitancy—without fear of any individual or order—that this is the biggest hypocritical sham that was ever ordered. The commission is so prejudiced against the men that they discount their actual ability in order to get less of them in the service of the government instead of giving them any sort of military preference.

W. BENJAMIN WEST.

New York, N. Y.,
June 20, 1925.

Cantilever Floor Construction Stresses

Sir—The article in *Engineering News-Record*, May 21, 1925, p. 845, entitled Cantilever Floor Construction for Concrete Buildings, presents an interesting problem to the designing engineer as to how far he may go in applying this type of construction.

Analysis of the Printcraft Building design, with 300-lb. live-load provided for, shows that the concrete is sustaining higher unit stresses than those usually recommended. Considering each section of the figure as an independent cantilever bracket the greatest overstress will occur as com-

STRESSES IN CANTILEVER BRACKETS

pression in the bottom of the slab at the edge of the column cap.

The tabulation of stresses below was made for the three typical interior sections as shown by the sketch. As the unit tensile stress used in the design was not given, the result was computed for values between 12,000 and 20,000 lb. per sq.in. The effective depth of the slab at the edge of the column cap was taken as 18 in.

Stress in Steel in Lb. per Sq.In.	Extreme Fiber Stress (Compression) in Concrete in Lb. per Sq.In. 1-2-4 Mix $n = 15$. Section 1	Section 2	Section 3
20,000	792	1,392	1,120
18,000	763	1,355	1,083
16,000	735	1,315	1,048
14,000	705	1,277	1,010
12,000	670	1,230	962

The Joint Committee on Concrete and Reinforced Concrete recommends a value for compression in the extreme fiber in flexure adjacent to supports of continuous beams of 0.45 f'_c or 900 lb. per sq.in. for 2,000-lb. concrete. The elastic limit of such concrete is commonly given at 1,000 to 1,300 lb. per sq.in. and it is of great importance that this value be not exceeded. This would require that the octagonal forms be placed directly adjacent to each other, eliminating the suspended filler slab which is 4 ft. 2 in. wide. Also the filler slab at the corners between forms should be provided with bottom steel to distribute its load to the cantilever sections.

As the unit stress in the steel is increased, the bending moment remaining constant, the neutral axis is brought nearer the compression side of the slab and the unit compressive stress also becomes greater. A relatively low steel working stress is therefore most favorable to this type of design.

News of the Week

CURRENT EVENTS IN THE CIVIL ENGINEERING AND CONTRACTING FIELDS

Engineering Educators Meet at Schenectady, N. Y.

Research, the Teaching of English to Students and Industrial Engineering Discussed

The thirty-third annual meeting of the Society for the Promotion of Engineering Education was held June 16-20, 1925, at Schenectady, N. Y., with headquarters at the engineering building of Union College. The attendance was large for this society, about 350. It was of unusual interest due to the central-feature, which was the preliminary report of the Board of Investigation and Co-ordination, whose work is being financed by the Carnegie Corporation, a report of whose tentative findings will be published in the issue of July 2.

The formal program occupied two days, June 18 and 19, preceded by two days of well-attended special conferences and inspection trips, and followed by an all-day excursion on Lake George. In addition to the major features the convention was remarkable for the well-conducted special meetings of teachers of English, of electrical engineering and of industrial engineering, each group having programs comprising papers by eminent specialists and discussion of high order. As to English, there was indicated an increasing place for it in technical school curricula, due no doubt in considerable part to the influence of alumni and employers of technical graduates. There is being rapidly developed a class of teachers of English who know what kind of instruction technical students need and who, while not engineers, are striving to get the engineering point of view.

As to industrial engineering, while there is not yet complete agreement as to teaching method, technical schools and industry are appreciating the need for engineering graduates who have a wide outlook upon industry and are better prepared to solve the problems of management.

The fact that this convention was held at the seat of one of the great research laboratories of the country, that of the General Electric Co. was utilized in directing attention to the importance of research in connection with engineering instruction. A notable gathering of eminent research workers was held in the laboratory for discussion of this subject. The consensus of opinion was that there are ample funds available for research but the difficulty is to secure men properly fitted for this work.

As one speaker said: This work requires the soundly trained engineer who can apply to his investigations the results of advanced information. Quality is more important than quantity in engineering. How shall these men be trained? One way is through graduate

(*Continued on p.* 1074)

Engineering Fifty Years Ago

From *Engineering News*, June, 1875

THE BRIDGE to be built over the Monongahela River, at the "Point" at Pittsburgh, will be constructed on the suspension principle, but instead of wire cables, immense chains will be employed, of which there will be two. These chains will be composed of wrought iron links, each twenty feet in length and formed of sixteen flat bars placed side by side, and at a distance from each other of one and two inches. Into these spaces at the ends, fit the bars of the next link, and the entire thirty-two bars are joined by an immense hardened iron pin six inches in diameter and four feet long. The lateral width of the chain is forty inches. At the apex of each iron tower the chain will be attached to an iron "saddle," meeting upon rollers that admit of sufficient play to accommodate the expansion and contraction of the chain from heat and cold. From the top of each tower to the main span, and holding somewhat the same relation to the chain as the string does to the bow, are placed girders, which are intended to prevent sagging of the chains under unusual strain. The plans of the superstructure were prepared by Mr. E. Hemberlee, the American Bridge Company's engineer, which company, as we note elsewhere, has the contract.—*American Manufacturer.*

The contract for the entire work of piers and superstructure of the new "Point" bridge was awarded last Thursday to the American Bridge Company, of Chicago at the price named in their proposal, $401,250. The company let the masonry to John Megraw, of Allegheny. The bridge is to be completed for travel by August, 1876. The entire cost, including approaches, etc., will be about $450,000.

To Construct Another 220,000-Volt Transmission Line

Application was made on May 28 to the California Railroad Commission by the Southern California Edison Co. for permission to construct a 225-mile transmission line designed to bring electrical energy from the chain of power plants on Big Creek at a potential of 220,000 volts to load centers in southern California.

The new line will require a construction period of two to three years, it is estimated, and is to cost about $6,000,000. Its capacity will be 150,000 kw. Bids for material are to be received soon. The conductors specified are aluminum cable with steel cores.

Wide Range of Subjects at N.E.L.A. Meeting

Secretary Hoover Speaks on State Versus Federal Regulation—Special Sections

The annual convention of the National Electric Light Association at San Francisco, June 15 to 19, brought together some 3,000 representative men of the electrical industry from all parts of the country. General sessions were held in the mornings and in the afternoons the several sections, namely, technical, accounting, commercial and public relations, held separate sessions to discuss reports pertaining to their respective fields. At the only evening meeting Herbert Hoover spoke before an audience of about 6,000 people, touching on some of the chief problems of the electrical industry today. In speaking of public relations he said, in part:

"The real issue in this question is whether states, through their regulative powers, are already in control of the situation for the public interest.

"The anxiety in the public mind over these charges is inherited from the bitter chapter of exploitation when the railroads went through a similar era of expansion, consolidation, and interconnection. No one can review that period of wild finance, plunder and corruption in transportation with any feeling of national pride or satisfaction.

Effectiveness of State Regulation

"No one can survey the work of the state commissions and the instructive series of court decisions concerning their rulings as a whole without realizing that we are gradually developing a science of regulation and of understanding on one hand of the means of drawing the fine line between minimum rates to the people and on the other hand of such a reasonable profit to the industry as will stimulate its advancement. It is my belief from an investigation that the Public Service Commissions with very little just criticism are proving themselves fully adequate to control the situation. The laws as written in the state statute books are sufficient to protect both the public and the industry, the two parties to the utility contract.

Federal Regulation

"It has been proposed that as power districts may be no respectors of state lines, we must have federal regulation of power. I do not agree with the conclusion that federal regulation is necessary. I can see no reason for the imposition of a superior regulation, merely because Congress may have the power to exercise its authority under the commerce clause. The essence of regulation lies in a tight grip on the concern that actually deals with the

Controversy Over Tolls Delays Delaware River Bridge Work

Final action by the Delaware River Bridge Joint Commission on one of two contracts for work on the Philadelphia-Camden bridge, for which bids were received on June 17, has been held up pending developments in a controversy over whether or not tolls are to be charged. The contract in question provides for the construction of the roadway and footwalk slabs on the two approaches and on the main bridge structure and for the paving of the approach roadways with granite block and of the main structure roadway with asphalt. The slabs are to be of reinforced concrete, the approach slabs being 7 in. thick and the slabs on the suspended spans being 6 in. thick. The bridge is financed jointly by the States of New Jersey and Pennsylvania and the city of Philadelphia. Funds from Pennsylvania have been appropriated from current revenues and funds from Philadelphia have been provided by bond issues of general character which are to be paid for by taxation and retired in 50 years. Pennsylvania and New Jersey desire that the bridge shall be free of toll. New Jersey's share of the costs has been provided, however, by bond issues covering specifically the Philadelphia-Camden bridge and the New Jersey-New York vehicular tunnel. These bonds were voted on and issued with the intention that tolls should pay the interest and retirement charges. The subject of tolls has been a matter of controversy with the members of the Delaware River Bridge Joint Commission for several months. It had been thought that New Jersey would charge toll of vehicles going on the bridge from that side of the river, although no toll would be charged on the Pennsylvania side. In an opinion furnished to the mayor of Philadelphia, however, the city solicitor held that the bridge is an instrument of interstate commerce and that in the absence of an agreement between the two states for levying toll, New Jersey cannot legally make such charges but the entire matter is subject to Federal jurisdiction. In view of this opinion, the New Jersey members of the bridge commission decided to ascertain whether further expenditures of money from the bond issues would be proper if tolls cannot be collected, before further contracts involving New Jersey funds are entered into. For this reason the award of the contract for the roadway and sidewalk slabs was not made on June 19. Counsel to the Delaware River Bridge Joint Commission was directed to confer with the governors of the two states and the attorneys-general and submit opinions on the matter at a special meeting to be held June 29. Further delay in awarding the contract may cause delay in completing the bridge.

Engineering Educators Meet

(*Continued from p.* 1073)

departments in science. Another is by establishing special advanced courses in technical schools. In the past the principal research work in fundamentals has been done by scientists from the graduate departments of universities rather than by engineers. Engineering graduates have been more successful in applicational research.

EDUCATION AND INDUSTRY

One of the best appreciated sessions of the Schenectady meeting was that devoted to the above subject. The speakers were Sam A. Lewisohn, of Adolph Lewisohn & Sons; Ira N. Hollis, retiring president of Worcester Polytechnic Institute; F. C. Pratt, vice-president General Electric Co., and A. I. Lipetz, consulting engineer American Locomotive Co.

Mr. Lewisohn began by stating that large-scale production is the only solution of the economic problem of industry. Hence the engineer must be fitted for positions of administration. The management of human relations must eventually devolve upon the line officials. This being true, and also that technical graduates, while well prepared along engineering lines, are deficient in ability to organize human beings, Mr. Lewisohn advocated training to develop this ability although not with the idea of producing personnel specialists.

President Hollis explained the difficulty of teaching such subjects as human relations in a technical school and charged industry with the responsibility of adapting the product of the schools to the conditions met in practice.

Mr. Lipetz summed the whole subject up by showing how co-operation between teaching and industry can be maintained. After tracing the rather zigzag progress of science and invention, one being ahead now and the other then, he outlined a plan of engineering instruction which looks on an educational institution as an industrial enterprise. The students need to be trained for independent solution of practical problems by solving problems chosen in conformity with actual conditions. Teachers should if possible be actually connected with the industry whose problems they teach.

The president for the coming year will be Dean G. B. Pegram, of Columbia University and the secretary continues to be Dean F. L. Bishop, of the University of Pittsburgh. The meeting next year will be at the State University of Iowa, Iowa City.

Pan-American Road Congress to Be Held in Buenos Aires

The Pan-American Road Congress will be held in Buenos Aires, Argentine, South America, Oct. 3-13. The American delegation will sail from New York, Sept. 3, on the Grace Line Steamer "Santa Anna." The itinerary of the trip includes stops in Panama, Peru and Chili. From Valparaiso, Chili, the delegation will cross the Andes by rail reaching Buenos Aires about two days in advance of the opening of the conference. During the period of the conference visits will be made to other cities in Argentine and probably to Montevideo, Uruguay. Stops have been arranged on the return trip at Sao Paulo and at Rio de Janeiro, Brazil. The party will land in New York on Nov. 11.

John H. Hayward, Pioneer in Construction Equipment, Dies

John H. Hayward, a designer and builder of construction equipment, died at his home in Teaneck, N. J., on June 14. Mr. Hayward was born in New York, April 7, 1847, and after graduating from a military academy took a position in the Manhattan Savings Institution, where he stayed for several years. Later he went into the produce business and was a member of the New York Produce Exchange. About 1873 he moved to Staten Island to live and there met a Dr. Johnson, an inventor, who interested him in the design of machinery and led him to appreciate the advantages to be gained from applying machinery to construction work. Subsequently he became general manager of the Manhattan Dredging & Elevating Co., an organization doing general contracting business. It was while with this company that he assisted in the development, and later manufactured, the so-called orange-peel type of bucket which had been patented by Dr. Johnson some years previous. From this time on Mr. Hayward devoted himself to the design and construction of excavating machinery of various types, later forming the Hayward Co., of which he was vice-president and treasurer at the time of his death. Details of the equipment developed by Mr. Hayward are to be given in a history of the development of construction machinery which *Engineering News-Record* has in preparation.

Plan Fixed Bridges at Chicago

As the latest step in the old project for fixed bridges in place of drawbridges over the Chicago River, a recommendation has been made to the city council by A. A. Sprague, commissioner of public works, to the effect that all existing drawbridges giving a headroom of at least 16½ ft. should be made fixed bridges by Jan. 1, 1930. For reconstructing 42 present highway bridges and building 23 new bridges during the next 50-year period it is estimated that the cost would be about $24,000,000 for fixed bridges, as compared with $60,000,000 if drawbridges are retained. In addition there would be a saving of the enormous aggregate of time now lost while traffic is interrupted by the opening of drawbridges. This change would not affect the Lakes-to-Gulf waterway, as it is designed for barge traffic.

Fellowship in Highway Transport Established at Michigan

A Fellowship in Highway Transport to be devoted to investigations under the direction of the Division of Highway Engineering and Highway Transport of the University of Michigan covering an approved subject relative to the utilization and operation of motor buses has been established recently by the Reo Motor Car Co. of Lansing, Mich. The Reo Motor Car Co. fellow will make investigations relative to the economic fields of motor bus transportation and efficient methods of operation for urban and intercity motor bus systems.

W. J. Dibdin of Contact Bed Fame Dies in England

William Joseph Dibdin, who introduced contact beds for treating sewage in the eighteen nineties, died on June 9 at the age of 74 years. From 1882 to 1897 he was chemist to the Metropolitan Board of Works and its successor, the London County Council. In the late eighties he conducted experiments on the chemical treatment of London sewage which were followed by the construction of the Barking and Crossness precipitation works, put in operation in 1889 and 1892 respectively. In March, 1891, shortly after the appearance of the classic reports on the work of the Lawrence (Mass.) Experiment Station, the London County Council ordered experiments made on the bacterial treatment of sewage—primarily effluent from the precipitation works. These experiments were begun by Dibdin in May, 1892, making use of beds of burnt clay, coke, pan breeze (a harder coke, from near-by gas works) and sand. About the same time, Dibdin induced his fellow members on the Sutton Urban District Council to change the plans for filter beds designed to treat chemical precipitation effluent when it could not be applied to the sewage forms. Of six proposed polarite filters only two were built, with two of coke breeze and two of sand, and an extra bed of "burnt ballast" (clay). In 1895-96 the type of contact beds that for some time bore Dibdin's name were built, and in 1904 triple contact beds were put in use at the Surrey sewage-works.

When the writer of these notes visited Dibdin in 1904, the latter, who was then devoting much attention to slate beds for sewage treatment, expressed regret that he had not taken out patents on the contact beds; he also spoke strongly against the use of septic tanks—which is interesting in view of the subsequent decline of the contact bed and the little footing ever gained by slate beds, correct as their underlying scientific principle may be.

After 1897 Mr. Dibdin was in private practice. He was a past president of the Institute of Sanitary Engineers and of the Association of Managers of Sewage Works. He invented the Board of Trade standard pentane argand, a radial and a hand photometer, read many notable papers, including two on sewage treatment, before the Institution of Civil Engineers (Vol. 88, Part II, 1886-7; Vol. 129, Part II, 1896-7) and several books, one of which was "The Purification of Sewage and Water," published in 1903.

N.E.L.A. Meeting

(*Continued from p.* 1073)

consumer. There is the possibility that generating concerns may sell their power wholesale at the state line to distributing companies, thus attempting to make their wholesale prices exempt from the regulation of the consuming state. But that state still regulates the price and service of the distributing company. Most commissions exercise supervision of the contracts for purchase of power. The commissions are unlikely to blindly accept as an item of cost the amount paid to an external transmission company for its power, but rather they will examine the cost and reject it as a basic element if found unfair or excessive or collusive. The utilities themselves would do well not to oppose it. It would fill the only gap open for federal intervention. For the rest co-operation between commissions could settle the possible minor questions.

"And there are the most weighty of reasons against federal regulation. Power is, by necessity, bound to be local in its districts—as to its service, its generation and distribution. It differs widely from the interstate implications of the railways where they are dependent not upon districts but upon whole groups of states. Local acquaintance, local valuation and public opinion can operate upon power to their fullest extent. Nothing will produce worse service than to attempt to transfer local problems to absentee solution at Washington. And if our democracy will stand at all it must stand upon the local responsibility. Nothing could be a more hideous extension of centralization in the federal government than to thus undermine the state utility commissions and state responsibilities."

Technical Sessions

At meetings of the technical section there were usually five or six hundred present; there was little or no discussion on most of the papers. The report of the Hydraulic Power Committee, typical of the reports summarizing the year's work of the several technical committees, reviewed progress in hydraulic power development and recommended ways and means of co-operation in further study. This year's report contained only a short statement about the pitting of turbine runners because manufacturers objected to the form of the report as originally prepared and publication was postponed in the hope of reconciling statements of manufacturers and committee members for a comprehensive statement next year. Snow surveys were mentioned as an important factor in economical purchase of fuel for standby service and extension of the chain of snow-measurement stations in the Sierra Nevada Mountains was reported.

A paper on "Special Features in Western Turbine and Water-Wheel Design" by E. C. Hutchinson, vice-president Pelton Water Wheel Co., summarized recent improvements in automatic control equipment, hydraulically balanced valves, rubber seal rings, runners and draft tubes. An excellent series of slides was shown with this paper.

H. A. Barre, Southern California Edison Co., read a paper on "Some Factors Affecting the Relation of Steam and Water Power in Combined Systems," Col. William Kelly, formerly of the Federal Power Commission and now director of engineering, N.E.L.A., spoke of his need for co-operation in co-ordinating the work of 500 committees and sub-committees of the organization. William F. Durand, president, American Society of Mechanical Engineers, read a paper on "The Engineer as a Factor in Human Affairs."

Pacific Port Authorities Meet in San Francisco

The twelfth annual convention of the Pacific Coast Association of Port Authorities was held in San Francisco, June 18, 19 and 20. With a registration of about forty delegates, Pacific Coast cities from Vancouver, B. C., to San Diego, Calif., were well represented.

The papers presented included the following: "Dredging," James H. Polhemus, general manager and engineer, Port of Portland, Portland, Ore.; "Purposes and Progress of Port Development at Seattle," George F. Cotterill, president Port Commission, Seattle, Wash.; "Municipal Belt Lines," C. J. Colden, president Board of Harbor Commissioners, Los Angeles, Calif.; "Determining Factors in Selection of Piling for Waterfront Structures," George F. Nicholson, harbor engineer, Los Angeles, Calif.; "Waterfront Zoning," M. A. Graham, president Board of Harbor Commissioners, San Diego, Calif.; "Jacketed Piles," Frank G. White, chief engineer Board of State Harbor Commissioners, San Francisco, Calif.; "Advantages of a Cold Storage Plant as a Port Facility," Col. G. H. Kirkpatrick," president Vancouver Harbor Commission, Vancouver, B. C.; "Port Traffic," W. S. Cahill, traffic manager Port of Seattle, Seattle, Wash.; "Responsibilities of Ports to Shippers and Operators," Fred. S. Knight, chief wharfinger Board of State Harbor Commissioners, San Francisco, Calif.

In the discussions emphasis was given to the need for water-proofing concrete structures between low and high tide levels. The crystallization of salts as moisture evaporates was cited as a frequent cause of progressive deterioration between tide levels in structures that might show no deterioration above or below this zone.

Experiments and tests on suction dredges at Portland to determine the types of cutter heads best suited to handling materials were reported and refrence was made to studies now under way with Wood screw pumps to reduce difficulties with obstructions.

Attention was directed to the importance of port zoning for the purpose of (1) segregating freight involving fire hazard, such as oil and lumber, (2) assigning works likely to produce smoke or smells with respect to prevailing winds and (3) reserving suitable locations for aquatic parks and places of public amusement.

Canadian Harbor Construction

The Canadian Parliament has voted an appropriation of $5,000,000 for extensions to the Quebec harbor. This will enable the harbor commissioners to continue the work they started last fall and which will take several years to complete.

The program for the improvement of the harbor at Toronto, Ont., Canada, calls for an expenditure of $7,500,000 during the next five years. This includes the cost of filling necessary for the new viaduct construction along the water front.

Railroad Across Pennsylvania Discussed Before Commission

Objections were entered and answered before the director of the Bureau of Finance of the Interstate Commerce Commission, at a hearing in Washington June 22 on the application of the New York, Pittsburgh & Chicago R.R. Co. for a "certificate of convenience and necessity" to build a new line of railroad across the state of Pennsylvania as a link in a proposed railroad system reaching from the Atlantic seaboard with the Middle West. A subsequent session will be held at a date to be fixed later when witnesses for the applicant will be cross-examined.

The New York, Pittsburgh & Chicago Railroad Co. early in April applied to the commission for authority to build a railroad from Pittsburgh to Easton, Pa., a distance of 283 miles, with two branch lines, as shown in the accompanying map. Its proposition is a revival of a similar railroad project started about twenty years ago. In 1914 the line was located from Pittsburgh as far as the Susquehanna River and plans were prepared for the bridges, viaducts and tunnels. From the Susquehanna to Easton the line has not been located on the ground.

The railroad will be double track and will have an 0.3 per cent grade against eastbound traffic and 0.4 against westbound, except for a 7½-mile pusher grade of 1.38 per cent. The maximum curvature is 4 deg. On account of the mountainous character of the country, the grading will be heavy and there will be numerous tunnels and viaducts, some of the latter being considerably over 100 ft. high and one of them being 300 ft. high. The maximum tunnel length is 15,000 ft. All construction is to be of permanent character and all highway and railway crossings separated.

The estimated cost per mile is as follows: Roadway construction, $530,000; equipment, $128,000; and general expenses, which include interest during construction, $99,000, a total of $757,000 a mile.

The projected line forms an essential link in the trunk line railroad system which L. F. Loree, president of the Delaware & Hudson, is reported to be planning. By using the Lehigh Valley from Easton to New York and the Wabash west of Pittsburgh, he will have a line from New York to Chicago 80 miles shorter than the Pennsylvania and still shorter than either that of the Baltimore & Ohio or the New York Central.

At the hearing counsel appeared for the New York Central and the Pennsylvania railroads, which have entered opposition on the ground that existing facilities are adequate to handle traffic in the territory. Daniel Willard, president of the Baltimore & Ohio, testified that the proposed line, if built, simply would take away business from lines with present capacity to handle all traffic in the territory.

L. F. Loree, who represented the E. H. Harriman estate, which is interested in the proposed road, testified that Mr. Harriman many years ago became interested in the proposal and acquired franchises and rights under which it is now proposed to proceed. He declared the attitude of the New York Central inconsistent in that two years ago its officers testified that there is need for additional lines through Pennsylvania. If the application is granted, those behind the project can finance it easily, Mr. Loree said.

F. A. Molitor, president of the applicant corporation, said he had surveyed the proposed line in 1913 and that in 1914 part of the route was staked. Replying to criticisms that the cost of construction would be excessive, Colonel Molitor explained that the estimate of $757,000 a mile included interest during construction and equipment. Referring to construction costs in past years, Colonel Molitor pointed out that one railroad constructed in 1914 cost $333,000 a mile while, due to recognized increases in cost since that year, it would cost twice that sum per mile today.

PROJECTED RAILROAD ACROSS PENNSYLVANIA

Plans for Toronto, Ont., Viaduct

The plans and specifications for the railroad viaduct to be built by the Canadian Pacific and the Canadian National Rys. are practically completed and it is expected that bids will be called for in the near future.

Engineers Appointed to Draw Up Plans for $5,000,000 Dam

A board of consulting engineers to supervise plans and specifications for the construction of the Coolidge Dam on the San Carlos Indian Reservation in Arizona, was named June 22 by the Commissioner of Indian Affairs with the approval of the Secretary of the Interior.

The members of the board include, Louis C. Hill, construction engineer, and Fred A. Noetzli, designing engineer, Los Angeles, Calif., and Andrew J. Wiley, construction engineer, Boise, Idaho. All of the appointees have wide experience in engineering and irrigation enterprises in the West, two of them having served with the Bureau of Reclamation.

The dam, which will be built across the Gila River near San Carlos, will cost approximately $5,000,000 and will store water for the irrigation of from 75,000 to 100,000 acres of Indian lands, public and private lands in the lower Gila River Valley. It will furnish a permanent supply of water to the Pima Indians living on the San Carlos Reservation.

Congress recently authorized the construction of this reclamation project, the expenditure not to exceed $5,500,000. An appropriation of $450,000 has been made to begin work and the selection of a board of consulting engineers to draw up and supervise plans and specifications for the dam will be the first step toward completion of the project.

Construction Starts on Rocky Creek Power Plant

Construction has been started on the twelfth hydro-electric plant of the Southern Power Co.'s system. The new plant is at Rocky Creek on the Catawba River in South Carolina. The plant will have an installed capacity of 60,000 hp.

Village Sewage Works Projects on Long Island, New York

Sewage-treatment projects for several villages on the Long Island coast as an outcome of last winter's oyster-typhoid outbreak are reported by *Health News*, the official organ of the New York State Department of Health. Conferences between local officials and the sanitary engineers of the department have been held. The status of the various projects is summarized by *Health News* as follows: "At Patchogue a committee is taking the initial steps toward establishment of a sewer district to include a part of the village and it is expected that a disposal plant ultimately will be constructed. At Greenport plans have been prepared and sent to the state engineer for approval. At Riverhead a committee has been appointed to study the local disposal problem and make recommendations. The village board of Sag Harbor, after holding a public meeting at which sentiment appeared to favor immediate action, has directed its engineer to prepare estimates. A settling tank has already been constructed at Shelter Island."

Engineering Societies

Calendar

Annual Meetings

AMERICAN SOCIETY FOR TESTING MATERIALS, Philadelphia, Pa.; Annual Meeting, Atlantic City, N. J., June 22-26, 1925.

AMERICAN SOCIETY OF CIVIL ENGINEERS, New York City; Summer Meeting, Salt Lake City, July 8-10, 1925.

AMERICAN PUBLIC HEALTH ASSOCIATION, New York City; Annual Convention, St. Louis, Mo., Oct. 19-22, 1925.

AMERICAN SOCIETY FOR MUNICIPAL IMPROVEMENTS, St. Petersburg, Fla.; Annual Meeting, Des Moines, Iowa, Oct. 26-29, 1925.

The Engineers Society of Pennsylvania has elected the following officers for the ensuing year: Frank A. Slack, Harrisburg, Pa., president; Thomas M. Kelker, Harrisburg, Pa., and R. Boone Abbott, Reading, Pa., vice-presidents. Theodore J. Gould is secretary of the society.

The Association of Consulting Engineers of Canada has been granted a dominion charter of incorporation. The purposes of the association are to promote ethical standards and practical efficiency in all branches of consulting engineering and to increase the usefulness of the profession to the public. The incorporators are de Gaspe Beaubien, Robert A. Ross, Arthur Surveyer, James L. Busfield, Henry Holgate, and others of Montreal. The head office of the organization will be at Montreal, Quebec.

Personal Notes

J. FLOYD HALL has been appointed borough engineer, Borough of Swissvale, Pittsburgh, Pa., to succeed his father, the late J. D. HALL.

ROBERT H. WHITTEN, Cleveland, Ohio, city planning and zoning consultant, who was secretary of the city plan and zoning commission, New York City, from 1914 to 1917 and consulting engineer to the city plan commission of Cleveland from 1918 to 1921, announces the removal of his office from Cleveland to 175 Fifth Ave., New York City.

ROBERT RIDGWAY, president of the American Society of Civil Engineers, and chief engineer of the New York State Transit Commission, was given the degree of master of arts at the commencement of Harvard University. Later he addressed the alumni, discussing to some extent the apathy of many of the eligible voters of the country and the tendency of the other half to criticize the government but also noting that there is a steady improvement in the standards of administration of public affairs.

A. M. RAWN has been appointed assistant to the chief engineer of the Los Angeles County sanitation districts. Mr. Rawn has been connected with this work since the inception of the plan to consolidate into one office the sanitation work of the entire county.

SYLVESTER Q. CANNON, city engineer of Salt Lake City, Utah, since 1913 and water supply engineer of the city for a year previous to that time will resign in the near future to devote himself exclusively to his duties as one of the heads of the Mormon church.

L. P. M. GAYLORD has been reappointed county superintendent of Highways for Lewis County, New York, with headquarters at Lowville, N. Y.

O. C. MERRILL, executive secretary of the Federal Power Commission, received from Bates College this week the degree of Doctor of Science; Mr. Merrill was a graduate of the school in 1899.

E. W. ODBERT, Sturgeon Bay, Wis., has been appointed city engineer of that city.

LOUIS D. RICKETTS, consulting engineer, New York City, well known as a mining engineer in Arizona and at one time state geologist of Wyoming, received the degree of doctor of engineering June 17 from Princeton University, from which he graduated in 1881.

GUY A. REMINGTON, general manager of the Nampa-Meridian Irrigation District, has tendered his resignation, effective July 1, in order that he may become manager of the Wichita County Water Improvement District at Wichita Falls, Tex., to which position he was elected recently. Mr. Remington has been in the employ of the Nampa-Meridian Irrigation District for 11 years and has been general manager for the past 4 years.

S. R. GRAY, has been appointed city engineer of Chippewa Falls, Wisconsin.

W. W. FINEREN, Jacksonville, Fla., assistant engineer in the office of the United States district engineer, has resigned that post after 23 years in the service of the government, to engage in business in other fields. Mr. Fineren graduated from Cornell University in 1902 and since that time has been continuously with the United States Engineer Department, on work in New York, North Carolina, New Jersey and Florida; in Florida he had been engaged in construction work at Tampa, Key West and Jacksonville.

ROSWELL E. PFOHL and THOMAS S. MCLAUGHLIN announce the establishment of the firm of Pfohl & McLaughlin, Inc., architects and engineers, 830 Walbridge Building, Buffalo, N. Y. Mr. Pfohl is a graduate of the Massachusetts Institute of Technology and was formerly chief engineer for Moran, Maurice & Proctor, consulting engineers, New York City. Mr. McLaughlin pursued a special course of study in architecture at the Massachusetts Institute of Technology and has for the past nine years practiced architecture at Providence, R. I.

Obituary

BRIG. GEN. CHARLES E. L. B. DAVIS, whose death was noticed in last week's issue, graduated from the U. S. Military Academy in 1866 instead of 1886 as stated there. His appointment to the rank of brigadier general was made in 1908.

GEORGE S. ROBINSON, a civil engineer who was associated with the Potomac Electric Power Co. for a number of years, died at his home in Washington, D. C., June 12.

WORTHINGTON M. JACOBUS, formerly a member of the New Jersey Ship Canal Commission and later its consulting engineer, died at his home in Passaic, N. J., on June 16, aged 58 years.

CHARLES R. WHEELOCK, civil engineer, Orangeville, Ontario, died June 5 after an illness of several weeks, aged 59 years. Mr. Wheelock was senior member of the engineering firm of Wheelock & Christie, and had been county engineer of Dufferin and Peel; he was also a past president of the Ontario Good Roads Association.

HERMAN G. GREEN, contractor, Green Bay, Wis., was accidentally killed while superintending the construction of a state highway bridge over the Brazos River near Valley Junction, Tex., on April 22, 1925. He was born in Green Bay, Wis., March 17, 1876, and received his education at Cornell University, afterwards associating himself with his father, Adolph Green, bridge contractor for many years. In 1917 the company was incorporated under the title of Adolph Green Construction Co., of which the son was vice-president. In 1920, upon the death of Adolph Green, he became president which position he held up to the time of his death. Among the most recent larger projects completed under his supervision was the Main St. bridge over Fox River at Green Bay, Wis.

PROF. H. MULLER-BRESLAU, of Berlin Technical College, Berlin, Germany, died April 23, at the age of 74. He had held the chair of mechanics of construction and steel bridges at this institution for 35 years, having succeeded the well-known Winkler, and was a leader in the development of structural theory during his entire career. His principal book, "Statik der Baukonstruktionen," has long been a standard for structural design in Europe.

J. D. HALL, borough engineer, Borough of Swissvale, Pittsburgh, Pa., died May 27, age 63 years. Mr. Hall had been in active practice of civil engineering for the past 37 years, had been borough engineer of Swissvale for 8 years and previously had been borough engineer of New Kensington, Arnold and Parnassus.

From the Manufacturer's Point of View

A Point of Contact
Between Maker and User of
Construction Equipment and Materials

Concrete Road Yardage

For May the square yardages included in concrete pavement contract awards, according to reports to the Portland Cement Association, were: 7,724,075 for roads; 4,169,707 for streets; and 392,656 for alleys; or a total for the month of 12,286,438 sq.yd.

The accompanying table summarizes the statistics for the current year.

SQUARE YARDS OF CONCRETE PAVEMENT AWARDED DURING 1925

Month	Roads	Streets	Alleys	Total All Classes
Jan.....	3,474,421	963,256	75,236	4,512,913
Feb.....	3,787,192	1,201,224	58,723	5,047,139
Mar....	5,728,862	2,483,662	190,553	8,403,077
Apr.....	12,462,646	4,431,220	469,117	17,362,983
May....	7,724,075	4,169,707	392,656	12,286,438
Total	33,177,196	13,249,069	1,186,285	47,612,550

Western Road Show Is Planned

The Western Road Show to be held in San Francisco Nov. 9-14, will include not only exhibits of construction equipment but also demonstratons of the machinery in actual operation. This combination is made possible by the 18 acre show site that is provided.

The show is sponsored by the Western Construction Equipment Distributors, an organization containing 90 per cent of the construction machinery dealers of the West. No attempt has yet been made to sell space for exhibits, but the secretary, P. H. Curtis, of *Western Highways Builder*, reports that enough firms have already indicated their intention to exhibit to insure the financial success of the show.

There will be several conventions held in conjunction with the road show, and different days have been set apart and programs arranged for the contractors, engineers, supervisors and dealers.

Ford Makes 500,000 Tractors

Ford Motor Co., reached the half-million mark in the production of Fordson tractors, May 21, when Fordson No. 500,000 came off the assembly line at the River Rouge plant.

Manufacture of Fordson tractors today presents a striking contrast to the methods employed eight years ago when production began at the old plant at Dearborn. At the start only three or four Fordsons were produced each day and it took weeks to machine some parts. Today at the River Rouge plant, where all tractors are now manufactured and assembled, output is on a schedule calling for 400 Fordsons a day. The production schedule shows that 31 hours and 8 minutes after iron ore has arrived at the River Rouge docks it is converted and assembled into completed tractors.

The Fordsons almost immediately became a factor in the war, for England, lacking enough horses to plow ground necessary for food, turned to mechanical power and the first 5,000 Fordsons manufactured were purchased by the Ministry of Munitions for farm work in the United Kingdom. Because of this it was not until 1918 that the Fordson tractors began to reach the American farmer and the construction field. Economies effected on the farms by use of the Fordson have in late years attracted other users of power. The result has been that the Fordson has invaded one field after another until at the present time more than twenty per cent of those sold are for use in industrial lines where power is a factor.

Business Notes

WESTINGHOUSE ELECTRIC & MFG. CO., East Pittsburgh, reports, in its financial statement for the fiscal year ended March 31, 1925, sales of $157,880,291. Factory cost, including depreciation and taxes, amounted to $144,242,065, leaving a net manufacturing profit of $13,638,226. The decrease in the total value of all orders booked was 5 per cent as compared with the previous year. The value of unfilled orders at the close of the fiscal year was $55,271,908, compared with $63,738,702 at the close of the previous fiscal year.

L. R. MEISENHELTER, specialist in arranging industrial exhibits, has been placed in charge of assembling the various transportation, mining and manufacturing exhibits for the Sesquicentennial International Exposition in Philadelphia in 1926. He was formerly chief engineer with the Harrisburg Engineering Co. and prior to that vice-president in charge of mechanical engineering for the Houston Standwood & Gamble Co.

BLAW-KNOX CO., Pittsburgh, had as its guests, May 27, forty-three of the leading subway engineers of New York and Philadelphia. After going through the Blaw-Knox factory, the engineers were taken out to inspect the Blaw-Knox inundation system and other equipment and methods that are being used in the construction of the new University of Pittsburgh stadium.

CHICAGO BRIDGE & IRON WORKS, through its New York office, has received an order from the Vacuum Oil Co., for 57 tanks of varying capacities for Melbourne, Sydney, Adelaide and Brisbane in Australia and Wellington and Auckland in New Zealand. Wiggins floating roofs will be used on 28 of the tanks. Approximately 2,500 tons of steel are involved.

CHARLES F. ABBOTT, executive director of the American Institute of Steel Construction, has been appointed a member of the committee on trade relations in connection with the National Distribution Conference as organized by the Chamber of Commerce of the U. S., for the purpose of studying problems of distribution. Mr. Abbott has had much experience along the line of work that is outlined for the committee, having been sales executive and organizer of the New York Sales Manager's Club, the American Society of Sales Executives, and chairman of the Marketing and Distribution Council of the Advertising Club of New York.

WHITE CO., Cleveland, Ohio, announces that H. D. Church has been appointed director of engineering. He was formerly chief engineer of the truck department of the Packard Motor Car Co. and assistant chief engineer of the Chevrolet Motor Co. George W. Smith, formerly in charge of the experimental and research departments, has returned to the White Co. as technical assistant to the vice-president and general manager.

E. M. MCLEAN, formerly division sales manager of the Four-Wheel Drive Auto Co., Clintonville, Wis., has been promoted to the position of general sales manager. Mr. McLean went with the FWD Co. in 1916 as advertising manager. Prior to that time, he had been associated with the Armleder Truck Co., Cincinnati, Ohio, and with the Western Electric Co.

E. R. SUTER has been appointed representative of the building equipment department of the Duriron Co. with offices at 110 South Dearborn St. Chicago. Mr. Suter's territory will cover northern Indiana, northern Illinois, Wisconsin, and the upper peninsula of Michigan.

Equipment and Materials

Standardization of General Purpose Motors

General Electric Co., Schenectady, N. Y., has recently added a new d.c. motor and a redesigned a.c. motor to its general purpose line, which now includes all standard speeds and horsepower ratings for use on any standard circuit. An outstanding advantage of the standardization of these motors is the fact that the bearing linings are interchangeable between the alternating and direct current types; they are also, for the most part, interchangeable in any given type of motor, a total of 2,500 ratings listed utilizing not more than 23 different bearings.

The redesigned a.c. motors supersede the KT-300 line, and are of the squirrel cage and wound rotor type. Standard power ratings range from 5 to 200 hp. This line of motors includes both horizontal and vertical machines. The horizontal motors are suitable for belt, gear or chain drive or direct connection, and the vertical machines are mainly adapted for direct connection.

The new d.c. motors include both constant and adjustable speed machines. The outstanding improvements on the d.c. motors are mechanical including riveted frame construction and steel-shell babbitted bearing linings. The

General Electric Co. advocates the use of sleeve bearings on its motors, but will furnish ball bearings to those who prefer this type.

One-Half Yard Gas Shovel-Crane Uses Only 18 Gears

For the use of road contractors who have need for cranes and shovels at different times but do not wish to buy separate pieces of equipment for which they do not have use at the same time, the Brown Hoisting Machinery Co., Cleveland, Ohio, has recently put on the market a new ½-yd. capacity gas engine crawler shovel-crane.

Features of this machine are its extreme simplicity (there being only 18 gears), its pivot steering device, and its quick convertibility to dipper shovel or clam-shell work. Pivot steering, accomplished by having the creepers run in opposite directions, makes possible the working of this shovel in narrow quarters. Steering is controlled entirely from the operator's position and without swinging the boom. The crowding motion, which is of the rope type, is controlled by one lever, and is entirely independent of the dipper hoist. This feature permits the dippers to be crowded in or out while digging.

Small Motion Picture Camera

The Bell & Howell Co., Chicago, has designed and built a motion picture camera for commercial use. This camera weighs 4½ lb., may be held in the hand or used with a tripod and operates at two speeds—normal (sixteen pictures per second) or half normal (eight pictures per second). It has a universal focus lens which eliminates the necessity of adjusting the camera for distance. The camera is daylight loading, and the films, which come in 100-ft. rolls have a capacity for 4,000 views per roll. A key-winding spring motor controlled by a governor operates the camera.

The company also markets a projector which connects to any 110-volt light socket and folds up to fit into a small carrying case. The projector weighs 9½ lb.—packed into the carrying case; with film, it weighs 14½ lb.

It is suggested that the motion picture camera and projector will be useful to contractors, engineers and salesmen who wish to demonstrate equipment performance. Its use as an aid to the engineer in consulting work, particularly, is obvious.

Batch-Measuring Bins for Road-Building Uses

A new type of bin for use in road building has been brought out recently by the Erie Steel Construction Co., Erie, Pa. This bin, which is called the improved Type C plant, has four sloping sides to reduce the amount of dead storage to a minimum. It is used in connection with the company's Type C telescope AggreMeter boxes. The bins are made in two sizes, of 85 and 115 tons capacity.

The AggreMeter boxes are of the telescope type, the sand having adjustment of 6 to 13½ cu.ft. and the stone 12 to 24 cu.ft. Any size batch between these limits can be had. The operating boxes are of the cutoff type mounted on rollers, and to fill the boxes the operator opens both gates with the same operating lever and the material flows until the boxes are filled.

New Heavy-Duty Engine

The Buda Co., Harvey, Ill., recently put on the market a heavy-duty engine which develops approximately 50 b.hp. at 600 r.p.m. and 83 b.hp. at 1,000 r.p.m. The engine is built with the idea of taking full power from either end of the crankshaft. The cylinder blocks are cast in pairs to facilitate handling. All working parts of the engine are reached by forced lubrication from a geared pump. The crank case is drained by turning a lever on the side of the crank case without the usual necessity of getting underneath. As shown in the illustration, the crankcase is equipped wtih large hand holes on the carburetor side for inspection or adjustment purposes. The exhaust manifold has a vertical center outlet and makes a very convenient connection for industrial purposes, as the exhaust may be carried off vertically from the center.

This engine finds application in operating such equipment as cranes, hoists, air compressors, shovels, and pumps. It may be furnished either in the bare condition as shown in the illustration or as a complete power unit with sheet metal and steel base.

Improvements Made in Road-Building Pump

The Novo Engine Co., Lansing, Mich., announces changes in its Type W pump. The new design has special adaptability to road-building such as water-supply for the paving mixer, roller and for wetting subgrade and curing concrete. The development of larger power units for this pump some years ago increased its usefulness and capacity, and considerable paving work was made possible with infrequent moving of the pump. At first the cooling water for the power unit was piped directly from the pump to the engine, eliminating the radiator, fan and accessories. Recently it was deemed advisable to use the standard No. 50 power unit, complete with steel housing, radiator and fan, so that the engine could be used as a power unit, operating independently of the pump. The outfit, thus built, may be left unattended for long periods.

Rivet Forge Has One-Piece Hearth

The Buffalo Forge Co., Buffalo, N. Y., has designed a rivet forge with a hearth made entirely from one piece of heavy steel plate. This forge is lighter but stronger than the old two-

piece construction and has no seams to collect moisture and rust. The features of this forge are its deep drawn, 18-in. pressed steel fire pan with turned down brim, which serves as a tool rest, and the No. 200 blower, gear ratio 47½ to 1. Among the other equipment of this forge is a cast-iron gear case with inspection cover, improved blower clamp, volute type of fan case, four steel pipe legs supported by properly placed leg clamps, correctly perforated tuyere plate, steel windshield and a fan shaft that runs on New Departure ball bearings. Ease of knocking down

and setting up is due to the handy way in which it is fitted for this purpose. The four legs are held together half way down and at the top with clamps. This forge weighs 95 lb., measures 43 in. to the top of the hearth, and its largest leg spread is 35 in.

Publications from the Construction Industry

Road Construction — BARBER-GREENE Co., Aurora, Ill., has compiled, in a 48-p. booklet, entitled "Results on Road Jobs," a series of illustrated descriptions of the uses to which its line of road-building equipment was put in 1924. The booklet devotes itself especially to portable belt conveyors and bucket loaders.

Road-Building Equipment — AUSTIN-WESTERN ROAD MACHINERY Co., Chicago, has published the 1925 edition of its general catalog which gives short descriptions and technical specifications for each of the units of equipment in Austin-Western line. In addition to the material contained in the 1924 catalog, this 95-p. booklet describes the new equipment, including leaning-wheel graders, motor graders, portable conveyors, and for-cylinder motor rollers.

Road Rollers—HUBER MFG. Co., Marion, Ohio, describes its new gasoline motor roller which is a result of a half century's experience in manufacturing self-propelled tractive units. Besides the descriptive matter, the booklet is replete with illustrations not only of the roller and attachments, but also of many of the details; a colored cross-sectional view of the power unit shows the lubricating system.

Business Side of Construction

FACTS AND EVENTS THAT AFFECT COST AND VOLUME

U. S. World Trade Position Strong

"The export trade of the United States for 1924 amounted to $4,591,000,000, an increase of $423,000,000, or 10.2 per cent, over the total for 1923," reports the Foreign Commerce Department of the Chamber of Commerce of the United States.

The 1924 imports, amounting to $3,611,000,000, show a decline of $182,000,000, or 4.8 per cent, from the 1923 level.

Export gains were principally in wheat and other grains, raw cotton, copper, and other non-ferrous metals, machinery, vehicles, petroleum, tobacco and rubber. Declines were noted in coal-tar products, paints, pigments, fertilizers, meats, wood and paper.

Import gains occurred in foodstuffs and the non-metallic mineral products. Losses were recorded in animal products, textiles, gums, resins, rubber, tobacco, metals, chemicals and wood-paper.

Commenting upon these favorable developments in our world trade, Chauncey D. Snow, manager of the Foreign Commerce Department, states that "continued increase in exports, and a decrease in imports mark the year 1924. The monthly average for exports figured nearly $383,000,000, and the monthly average for imports, nearly $301,000,000. Automobiles continued their upward course and would have ranked second in the value list, though still at some distance from King Cotton, if wheat had not again emerged from the ranks and claimed second position. Coal had to give way to the gasoline and naphtha group."

That this favorable trade position has been maintained is shown by latest reports. May exports from the United States were $370,000,000, against $335,098,701 during the corresponding period in 1924. Imports totaled $328,000,000, compared with $302,987,791 for the same month last year.

This Week's Contracts—Week Ago—Same Week Last Year

The money value of contracts reported in the present issue of *Engineering News-Record* is here compared with the figures for corresponding weeks.

Minimum costs observed are: $15,000 for waterworks and excavations, $25,000 for other public works, $40,000 for industrial and $150,000 for commercial buildings.

MONEY VALUE OF CONTRACTS LET—ENTIRE U. S.

Car Loadings Portend Gain in General Business

American Railway Association Expects Increase This Year of 4 Per Cent Over Last and 1 Per Cent Over 1923

An unmistakably optimistic business outlook for the remainder of the current year is gained from the report of the Car Service Division of the American Railway Association.

In his report, M. J. Gormley, chairman, points out logical reasons for expecting heavier freight loadings at the peak of this season, than during corresponding periods since 1923.

It is evident that the volume of 1925 freight traffic will be a trifle over one per cent heavier than 1923 and about 4 per cent ahead of last year.

In estimating loadings for the first quarter of 1925, those submitted by the Division were only 0.7 per cent in excess of actual loadings.

Mr. Gormley's report, in part, follows:

"This estimate of the loading for the balance of the year 1925 is based on our best judgment, supplemented by reports from commodity committees of the Regional Advisory Boards, furnishing estimates of anticipated loading.

"Estimated June and July loading this year is shown to be less than same months of 1923 on the theory that assurance of continued adequate transportation results in not laying in of large stocks in advance of the actual necessities as was done in 1923. This tendency to carry smaller stocks, will, in our opinion, likewise cause heavier loading in the fall months this year to meet demand of that period and cause the high peaks indicated for September and October, which could be obviated to some extent by earlier shipments in anticipation of the fall needs.

"While it may be that we are overly optimistic in our estimate as to the volume of traffic that will be handled during 1925, nevertheless, we cannot find any substantial grounds in support of the statements we hear occasionally about a decline in business and which would justify us in making any change in our estimate.

"Total carloadings, 1925 to date, show

(*Continued on p. 1082*)

Use of Average Bids in Handling Minor Items on Estimates

Supplementary to tabulations of average bid prices covering minor items on subway estimate sheets, published in the Feb. 26 issue of *Engineering News-Record*, p. 377, and in the March 26 issue, p. 543, the following list has been prepared.

The items vary little from a standard price and the average is derived from the three lowest bids occurring in estimates on a given number of sections of New York subway and tunnel construction.

The use of the average bid will guide, if not eliminate, the guesswork usually involved in minor items on estimate sheets.

The tables were compiled by Alexander Lyle, Assoc. Mem. Am. Soc. C. E.

AVERAGE BID PRICES COVERING MINOR ITEMS ON ESTIMATES

Classification	Unit	No. of Sects.	Bid Price Maximum	Bid Price Minimum	Bid Price Average	Per Cent Ratio, Max. to Min.
By-pass pipe W.S.—20 in.-above street	Lin.ft.	4	$28.00	$7.00	$16.79	400

Weekly Construction Market

CONCURRENT with the arrival of German steel in Galveston, Tex., is the influx of Belgian building brick at the Port of New York.

In the case of bars re-rolled from rails, the price at Dallas sagged, in one week, to the present level of $2.80 per 100 lb. as against $3.08 formerly. The sales were made on a direct-to-consumer basis. Limited shipments of foreign structural shapes also affected the market, probably causing the drop of 15c. per 100 lb. reported in that classification.

Belgian brick, however, did not have the effect of breaking the market. Prices still range from $19 to $20 per M., delivered at site of job in Manhattan. Scarcity, in the presence of heavy demand, probably accounts for the display of price strength in this market.

Domestic producers have recently been troubled with strikes in which the workers won their demands in most cases.

Imports of common brick into the customs district of New York, according to the Bureau of Foreign and Domestic Commerce, were 44,208,000 for the calendar year 1924, against 61,506,000 during 1923.

Inquiries sent out by *Engineering News-Record* to various points along the Atlantic seaboard and West as far as the Mississippi River, showed that the imported brick did not penetrate very far in any direction from New York.

Last year Belgium shipped 43 per cent of the brick received here from Europe; Germany, 39 per cent; Holland, 14 per cent, and Canada, 2 per cent. The rest came from Italy, England, Mexico and Spain.

Explanation of Prices—Prices are to contractors in carload lots unless other quantities are specified. Increases or decreases from previous quotations are indicated by + or — signs. For steel pipe, the prevailing discount from list price is given; 45-5% means a discount of 45 and 5 per cent.

New York quotations delivered, except sand, gravel and crushed stone, alongside dock; common lump lime, in 280-lb. bbl. net, and hydrated lime f.o.b. cars; tile "on trucks"; linseed oil and cast-iron pipe f.o.b.

Labor—Concrete laborers' rate, 93¾c.; building laborers, 75c.; excavating laborers, 50c. per hr.

Chicago quotes hydrated lime in 50-lb. bags; common lump lime per 180-lb. net. Lumber, sand, gravel and stone delivered on job.

Minneapolis quotes on fir instead of pine. Brick, sand and hollow tile delivered. Cement on cars. Gravel and crushed stone quoted at pit. We quote on brown lime per 180-lb. net; white is $1.70 for Kelly Island and $1.60 for Sheboygan. Common labor not organized.

THIS limited price list is published weekly for the purpose of giving current prices on the principal construction materials, and of noting important price changes on the less important materials. Moreover, only the chief cities are quoted.

Valuable suggestions on costs of work can be had by noting actual biddings as reported in our Construction News section.

The first issue of each month carries complete quotations for all construction materials and for the important cities. The last complete list will be found in the issue of June 4, the next on July 2.

Denver quotes on fir instead of pine. Cement "on tracks"; gravel and sand at pit; stone on cars; lime, brick, hollow tile and lumber on job. Tile price is at warehouse. Linseed oil, delivered in wooden bbl. Common lump lime per 180-lb. net.

Atlanta quotes sand, stone and gravel per ton instead of cu.yd. Common lump lime per 180-lb. net.

Dallas quotes lime per 180-lb. bbl. Steel, cement, cast-iron pipe and crushed stone f.o.b. cars, other materials delivered.

San Francisco quotes on Heath tile, size 5½ x 8 x 11½. Prices are all f.o.b. warehouses except C. I. pipe, which is mill price plus freight to railway depot at any terminal. Common lump lime per 180-lb. net. Lumber prices are to dealers in yards at San Francisco, for No. 1 fir, common.

Seattle quotes on Douglas fir (delivered) instead of pine. Lump finishing lime per 180-lb. net. Brick and hollow building tile delivered. Hydrated lime in paper sacks. Sand and gravel at bunkers.

Montreal quotes on pine lumber. Sand, stone, gravel and lump lime per ton. Stone and tile are delivered; sand, gravel, lime and cement on siding; brick f.o.b. plant; steel and pipe at warehouse. Hollow tile per ft. Cement price is in Canadian funds (the Canadian dollar stands at par). Bag charge is 80c. per bbl. Discount of 10c. per bbl. for payment within 20 days from date of shipment. Steel pipe per 100 ft. net; 3½-in., $59.49.

Car Loadings Portend Gain, Etc.

(*Concluded from p. 1081*)

an increase over the previous two years. Our esimate necessarily deals not with the tonnage to be moved but with the carloads to be handled and with that as a basis we believe our figures are conservative."

On June 1, 1925

CONSTRUCTION NEWS

Engineering News-Record, January 1, 1925

The Construction Barometer

Steady Gain in Industrial Lettings During Past Three Weeks

THERE has been a steady increase in both number and value of lettings for industrial construction since the week of Dec. 11. This is quite true of construction generally, in both private and public work. The rise in cost of construction, started in December, will probably continue throughout the first half of 1925. Much of the work now in the contract stage was deferred until recently in anticipation of further decline in cost, since that factor followed a downward course from May to November, 1924. The advance in cost since Dec. 1 has not affected such basic materials as cement, which shows a decline this week of 10c. per bbl. throughout the West; neither has the prevalence of plenty of common laborers been able to keep down the rising tendency. Steel and lumber show greatest firmness.

Engineering News-Record Statistics

Minimum on waterworks and excavations $15,000; other public work, $25,000; industrial buildings, $40,000; commercial buildings, $150,000.

VALUE OF LARGE CONTRACTS LET IN THE UNITED STATES

Waterworks

PROPOSED WORK

Mass., Brookline—Plans election $400,000 bonds to enter Metropolitan Water Dist., and for water supply improvements. H. A. Varney, city engr.

Tenn., Dickson—See "Sewers."

Tenn., Knoxville—Voted $2,500,000 bonds, waterworks improvements. Noted Nov. 20.

Tenn., Nashville — Plans new boiler system and force mains for pumping station. $500,000. H. E. House, mayor. Noted Nov. 20.

Wis., Milwaukee—City making plans rebuilding North Point Pumping Station, brick and concrete. $200,000. J. Schwada, City Hall, engr.

Ia., Greenwood—Election Dec. 29, $364,500 bonds for waterworks, incl. 300,000 gal. filtration plant, deep well, etc. B. N. Maxwell, city clk.

Neb., Bellevue—Election Dec. 31, $27,300 bonds for water system.

Neb., Ruskin—Election Dec. 30, $20,000 bonds for water system.

Tex., Celina—J. E. Ousley, mayor, soon takes bids complete waterworks. $40,000. Elrod Eng. Co., 3124 Main St., Dallas, engrs. Noted Oct. 30.

Tex., Donna—Election soon $75,000 bonds, waterworks and sewerage systems. W. Whigham, mayor.

Tex., Galveston—J. H. Kelly, city secy., takes bids about Feb. 1, 8 m.g. reservoir. $100,000. C. A. Halt, c/o City Hall, engr.

Tex., Lubbock — Voted $75,000 bonds waterworks improvements and extensions. F. R. Friend, mayor. Noted Dec. 11.

Tex., Paducah — J. W. Carroll, mayor, takes bids about Jan. 25, waterworks, paving various streets, etc. $190,000. Gantt-Baker & Co., 1st Natl. Bank Bldg., Oklahoma City, Okla., engrs. Noted Nov. 27.

Tex., Roby — Election Dec. 31, $40,000 bonds waterworks improvements. J. Encke, city secy.

Tex., Slaton—H. C. McGee, city secy., soon takes bids new waterworks and sewers. $30,000. Gantt-Baker & Co., 1st Natl. Bank Bldg., Oklahoma City, Okla., engrs.

Okla., Tulsa—Plans election soon $650,000 bonds for waterworks. $350,000 to pay for work done on Spavinaw project, and balance for additional improvements. Holway Eng. Co., 505 Wright Bldg., Tulsa, engrs.

Calif., Burlingame — Plans additional 6 and 8 in. mains and approximately 25 hydrants in various streets. $25,000 appropriated.

Que., Hull—Making plans new c.i. mains in various streets. $75,000. T. Lanctot, city engr.

Ont., Capreol — Election Jan. 1, $82,000 bonds for waterworks. A. Brundage, Town Hall, engr.

Waterworks (Continued)

Ont., Chatham—See "Streets & Roads."

Ont., Toronto—Making plans 2,800 ft. 30 in. c.i. mains in Huron St. from Phoebe to Wilcox Sts. $30,000. R. C. Harris, city engr.

Ont., Toronto—York Twp. making plans 3½ mi. 6 in. c. i. mains in Rountree Ave., Jane St., and Old Weston and Times Rds. $30,000. F. B. Goldike, 40 Jarvis St., engr.

BIDS DESIRED

La., Bunkie—Jan. 13, by E. H. Talifero, mayor, and Bd. Alderman, 1,975 ft. 8 in., and 3,350 ft. 6 in. c. i. mains, castings, etc., also constructing brick pumping station and installing pumps.

Mich., Jackson—Jan. 24, by City Clerk, power plant piping and erection of auxiliary equipment for new waterworks pumping station. J. E. Whittaker, city mgr., adv. E. N.-R. Jan. 1.

Wis., Madison—Jan. 9 (extended date), at office H. C. Buser, city clerk, 18,222 lin. ft. 30 in. c.i. mains. City to furnish pipe. Noted Dec. 25.

Wis., Milwaukee—Jan. 5, at office Central Bd. of Purchases, D. W. Hoan, chn., two hundred 1 in., three thousand each ⅝ and ¾ in. meter cocks, four hundred 1 in., six thousand each ⅝ and ¾ in. meter couplings, one thousand ⅝ in. and one thousand five hundred ¾ in. corporation cocks, one thousand five hundred 1 in. and one thousand ¾ in. curb cocks, all foregoing f.o.b. Milwaukee; also 40,000 lbs. chemically pure anhydrous liquid chlorine, to Water Dept.

Wis., Milwaukee—Jan. 9, by Central Bd. Purchase, D. W. Hoan, chn., 200 fire hydrants, to Water Dept.

S. D., Faulkton—Jan. 19, for 1350 ft. well, 6- to 11-in. diam., also heavy duty pumping equipment, and 3,150 ft. 4- to 6-in. water-main extension. Dakota Eng. Co., Mitchell, engrs.

Wash., Port Angeles—Jan. 21, by City Comn., 37,000 ft. 20 to 24 in. steel or wood stave pipe line to reservoir, Morse Creek dam and 6 m.g. concrete reservoir or distribution water system. Burns & McDonnell Eng. Co., 402 Interstate Bldg., Kansas City, Mo., engrs. Noted Nov. 20.

BIDS RECEIVED

N. Y., Long Island City — N. J. Hayes, comr. Water Supply, Gas & Electricity, Municipal Bldg., New York City, Dec. 22, from S. Gallucci, Railroad Ave., Corona, mains in Mt. Olivet and Otis Aves., etc., $6,910, Hylatt, Lewis and Prospect Aves., etc., $18,000; from F. Hanratty, 605 Beach Terrace, New York, $14,940. Noted Dec. 18.

N. Y., New York — N. J. Hayes comr. Water Supply, Gas & Electricity, Municipal Bldg., Dec. 23, mains in Barnes, Barker Aves., etc., from Knight & DeMicco, Inc., 448 East Tremont Ave., $15,860. Noted Dec. 18.

CONTRACTS AWARDED

Md., Baltimore—Mayor and City Council, City Hall, valves and hydrants for Water Dept., to A. P. Smith Mfg. Co., Norman St., East Orange, N. J., $150,823. Noted Dec. 18.

Ky., Newport — New filtration plant at reservoirs at St. Thomas, to C. T. McFarlan, Kansas City, $109,800. Engrs. est. $100,000. Noted Dec. 18.

Ill., Oak Park—For 5 m.g. rein.-con. reservoir, Lombard Ave. and Lake St., to W. J. Newman & Co., 21 North Curtis St., Chicago, $129,000. Noted Dec. 25.

Colo., Denver—Pumping equipment for Capitol Hill Station, to De Laval Steam Turbine Co., North Clinton St., Trenton, N. J., $28,820; for Ashland Station, to Le Courtenay Co., 5 Main St., Newark, N. J., $6,355.

Ont., Ford—Essex Border Utilities Comn., constructing tunnel to Merlo, Merlo & Ray, Ford City, $22,727; steel piping, to Horton Steel Co., Bridgeburg, $10,228; laying 48 in. intake, to Considine Reid Co., Ferry Docks, Windsor, $18,409. Engrs. est. $60,000.

Sewers

PROPOSED WORK

Mass., Brighton (Boston, P. O.)—Dept Pub. Wks., City Hall, Boston, plans sewerage system in Everett and Arthur Sts., here. $25,000. J. A. Rourke, Boston, comr.

Md., Baltimore—Mayor and City Council making plans 20 in. main in Gwynn Falls Parkway from Tioga and Liberty Heights to Poplar Grove St. and Beech Ave., $175,000; 36 in. second zone feeder main in Mondawnin Ave. extension from Reistertown Rd. to Gwynn Falls Parkway, $200,000; 16 in. main in Cook's Kane from the 12 in. main in Forest Ave. to Edmondson Ave., $175,000; 36 in. feeder main in North Ave. from Bway. to Gay St., $200,000. V. B. Siems, City Hall, water engr.

Tenn., Dickson—Plans sewerage system and waterworks extensions.

O., Steubenville—Plans sewers in Lincoln Sewer Dist. $56,201. Barston & McCurdy, 321 Ohio Bldg., Akron, engrs.

Ill., East St. Louis—Plans sewers in various streets. $750,000. W. McK. Brown, City Hall, engr.

Neb., Columbus—Voted $60,000 bonds, for 3 sanitary sewers.

Mo., St. Louis — Making preliminary plans sanitary sewer in Harlem Creek Dist. Sewer 16, 8- to 27- in. vitr. clay, brick or segmental block pipe. $38,500. W. W. Horner, 300 City Hall, engr.

Mo., Salem — Election Dec. 30, $90,000 bonds water works and sewers. Alexander Eng. Co., 517 Woodruff Bldg., Springfield, engrs.

Tex., Donna—See "Waterworks."

Tex., Lubbock—Voted $25,000 bonds, extending sanitary sewerage system. F. R. Friend, mayor. Noted Dec. 11.

Tex., Slaton—See "Waterworks."

Calif., Hermosa Beach—Election Jan. 20, $200,000 bonds, for sewerage system.

Calif., Los Angeles — South Bay Cities Sanitation Dist., 700 Hall of Records Bldg., takes bids in January, main trunk line sewer, 78,000 cu.yd. excav., 28,660 lin.ft. 24, 27 and 30 in. vitr. or rein.-con. pipe, 1,000 lin.ft. 6 in. drain tile, replace 1,000 sq.yd. macadam paving, 1,370 cu.yd. concrete paving, 500 lin.ft. concrete and 1,000 sq.ft. concrete sidewalks, etc. $462,800. J. E. Rockhold, 700 Hall of Records Bldg., Los Angeles, engr.

Calif., Ripon—Ripon Sanitary Dist. takes bids about Jan. 22, sewerage system. $30,000 available. J. S. Bates, Rowell Bldg., Fresno, engr. Noted Aug. 7.

Que., Hull—Making plans clay sewers in various streets. $45,000. T. Lanctot, city engr.

Ont., Chatham—See "Streets & Roads."

Ont., Elmira — Making plans activated sludge sewage disposal plant. $25,000. H. Johnston, 63 Frederick St., Kitchener, engr.

Ont., Toronto—Making plans 8 in. vitr. tile, concrete and brick trunk interceptor sewers in northern section, covering about 6 square miles. $10,000,000. R. C. Harris, city engr.

Ont., Toronto—Soon takes bids 8 and 12 in. vitr. tile sanitary sewers in Queens St. E. $22,000, 2 lanes $3,100, Kew Beach Crescent $10,900. R. K. Harris, city engr.

B. C., Vancouver—Voted $200,000 bonds, sewers in various streets. C. Brackenridge, city engr.

BIDS DESIRED

La., Amite City—Jan. 21, by B. L. Goodman, mayor, and Bd. Aldermen, sanitary sewerage system, and septic tank. M. L. Culley, Jackson, Miss., engr.

BIDS RECEIVED

N. Y., Long Island City—M. E. Connolly, pres. Queens Boro, Queens Subway Bldg., Dec. 22, sewers in Sutter and 79th Aves., etc., from Welsh Bros. Contg. Co., 32 Queens St., Astoria, (A) $163,274, from A. Paino, 2016 East 14th St., Brooklyn, (B) $148,956; sewer in Moore St., from Green Contg. Co., 734 Vernon Ave., Astoria, $5,720. Noted Dec. 18.

Md., Baltimore—Mayor and City Council, 400,000 lbs. manhole, sewer inlet and similar iron castings to Highways Eng. Dept., from Amer. Shoe Brake & Fdry. Co., Fulton Sta., $11,556. Noted Dec. 18.

Calif., Glendale—From P. S. Tomich, 1211 Douglas St., Los Angeles, sewers in Palmer Ave., Adams St., etc., 6 in. pipe at $0.95 per ft., 8 in. pipe $1.10, 43 manholes $0.70 each, 2 flush tanks $150 each, total approximately $28,156.

Calif., Los Angeles — See "Streets and Roads."

CONTRACTS AWARDED

N. Y., Brooklyn—E. Riegelmann, boro. pres., Boro Hall, repairing sewers in Hoyt St., to Manmill Constr. Co., 2035 Douglass St. $8,446; repairing rakes, screens, pumps, etc., in Caisson 2, West 12th St. and Neptune Ave., to C. L. Riker, 40 Vista Pl., Dongan Hill, $5,980. Noted Dec. 25.

Pa., Phila.—Dept. Pub. Wks., Bureau Surveys, to J. J. McHugh, 1617 Race St., sewers in Green Lane and Fairmont Park, $5,147, Clearview St. $8,728; to Nelly Bros. & Bissell, Inc., Oxford and Wakeling Sts., Wisshickon Low Level intercepting sewer, $114,997; to E. F. Bennis, 641 Chelton Ave., sewers in Boyer St. $8,664, Sharpnock St. $11,668; to Butler & Orlando, 52nd and Webster Sts., Buist Ave. $4,792, Irving St. $3,920; to A. De Sandro & Son, 3906 North 5th St., Napa St. $5,992, Torresdale Ave. $5,522; to J. J. Lombardi, 601 Lincoln Bldg., Wagner Ave. $6,150; to V. J. Perna, 752 South 10th St., Warnock St. $2,142. Noted Dec. 18.

Md., Baltimore—Mayor and City Council, 1,350 ft. 48 and 54 in. rein.-con. c[illegible], paralleled by 8 in. sanitary sewer, in [illegible]tin streets and rights-of-way secured [illegible] unsecured in Dist. H-1, Storm Water C[illegible] 79, to Aiello Constr. Co., Knickerb[illegible] Bldg., $25,287. Noted Dec. 11.

Tex., New Braunfels—F. G. Blum[illegible], mayor, brick and concrete sewerage [illegible]posal plant, to L. L. Winans, 2127 H[illegible] St., Ft. Worth, $26,000; sewerage sy[illegible], to Kirkwood & Wharton, 231 West [illegible]merce St., San Antonio, $48,474. N[illegible] Nov. 27.

Calif., Laguna Beach—Director La[illegible] Sanitary Dist., to A. Giebisch, Virgil W[illegible], Long Beach, sewer lateral system at $[illegible]668, pumping station $9,809, disposal [illegible] $11,085, ocean outfall $4,200. N[illegible] Aug. 14.

Que., Grand Mere—Will lay 2,000 ft., main sewer in LaRoche St. Jacques, St. Pierre and Angus Sts., by day labor. $30,000. J. A. Bernier, Grand Mere, engr.

Ont., Toronto—For 4,000 ft. brick and concrete interceptor sewer serving Parkdale and Exhibition area, to Russell Constr. Co., Harbor Comn. Bldg., $43,884.

Ont., Toronto—York Twp. will build ¾ mi. 8 in. and up vitr. tile sewers, by day labor. $75,000. F. B. Goldike, 40 Jarvis St., engr.

Waste Disposal

PROPOSED WORK

Ont., Oshawa—Plans concrete and brick incinerator. $30,000-$50,000. W. C. Smith, town engr.

BIDS DESIRED

Calif., Los Angeles—Jan. 20, by Bd. Pub. Wks., H. B. Ferris, secy., 200 ton incinerator. Noted April 17.

Bridges

PROPOSED WORK

Mass., Boston — Pub. Wks. Dept. plans new bridge over Boston & Albany R.R. tracks, on Tremont St. $100,000. J. A. Rourke, comr.

OFFICIAL PROPOSALS

Bids: Jan. 15.

Roads and Bridges
State Highway Commission

Richmond, Va.
December 23, 1924.

Sealed bids will be received at the office of the State Highway Commission, State Office Bldg., Capitol Square, Richmond, Va., until 10:30 a.m., Thursday, January 15, 1925, for the construction of:

1.—ROUTE 10—PROJECT F-76D (Reconstruction). From Farmville to .78 Mi. West in Prince Edward County, .78 Mi. of 18' x 8"-6"-8" Concrete. Approximately 8,200 sq.yds. Concrete Surfacing. No special designed bridges.

2—ROUTE 323 — PROJECT S-335C. Streets of Kenbridge. .9 Mi. of 18' x 8"-6"-8" Concrete roadway in Lunenburg County. Approx. .87 Ac. Clear & Grubbing, 2,968 Cu.Yds. Excav., 473 Cu.Yds. Borrow, 230 Lin.Ft. Pipe, 10.06 Cu.Yds. "B" Conc., 48 Lin.Ft. Wood Gd. Rail, 32 Lin.Ft. Wire Rope Gd. Rail, 22 Right of Way Monuments.

3—ROUTE 24—PROJECT S-385. Bridge & Approaches over Meherrin River at Emporia, in Greenesville County. Length: 288' 9". Width of roadway: 24 ft. and two 5' walks. One 110' Reinf. Concrete arch span, and five 30' reinf. conc. beam spans. Approx. 1,083 Cu.Yds. "A" Conc., and 188,500 lbs. reinf. steel, and 8,600 Cu.Yds. excavation.

Proposal guaranty to be cert. check, cashier's check or cert. of deposit, to the amount of $500.00 for bids less than $100,000.00 and $1,000.00 for bids more than $100,000.00. Proposal bonds 20% in excess of above amount may be used.

Plans and Specifications are on file at the Richmond Office State Highway Commission, and at the offices of the following District Engineers: Proj. F-76D at Lynchburg, Proj. S-335C at Richmond, and Proj. S-385 at Suffolk.

Additional plans for bidders on the above projects may be obtained upon application to the State Highway Dept., upon receipt of $5.00 payable to H. G. Shirley, $2.50 of which will be refunded if plans are returned in good condition within two weeks after bids are opened.

Engineers will be at the following places to show prospective bidders over the work:

Proj. F-76D—Office of Resident Engineer, in Farmville, Thursday, Jan. 8th, at 10:30 a.m.

Proj. S-385—Hotel Emporia in Emporia, Tuesday, Jan. 6th, at 11 a.m.

Proj. S-335C—Kenbridge Hotel, in Kenbridge, Wednesday, Jan. 7th, at 1 p.m.

The State Highway Commission reserves the right to reject any or all bids.

H. G. SHIRLEY,
Chairman.

C. S. MULLEN,
Chief Engineer.

Bids: Jan. 16.

Street Signs

Durham, N. C.

Bids will be received by the Purchasing Agent of the City of Durham, N. C., for approximately 300 street intersection signs complete, until 2:00 p.m., January 16, 1925, at which time they will be publicly read at the City Hall.

Samples and detail specifications must be submitted by the bidder with his proposal. Detail requirements can be obtained from H. W. Kueffner, Director of Public Works.

The City reserves the right to reject any or all bids or to accept such bids as appear in its judgment to be for the best interests of the City.

A. T. CRUTCHFIELD,
City Purchasing Agent.

OFFICIAL PROPOSALS

Bids: Jan. 22.

State Hospital Work

Raybrook, N. Y.

Sealed proposals for Water Supply for Cooling Purposes, Store House and Cold Storage Building, New York State Hospital for the Treatment of Incipient Pulmonary Tuberculosis, Raybrook, N. Y., will be received by Superintendent of Purchase, Room 408, Department of Architecture, Capitol, Albany, N. Dated: December 18, 1924.

CONSTRUCTION NEWS

Engineering News-Record, January 8, 1925

The Construction Barometer

Public Building Most Active in Eleven Northeastern States, Streets and Roads, in Middle West and Industrial Work, in South

THE gain in money value of lettings for large public buildings has been apparent since the week of Dec. 18. There is no increase in the number of contracts let, neither is there loss, from week to week. Construction is most active in the eleven Northeastern states, the Middle West and the Far West. In the first mentioned section, commercial buildings predominate; in the Middle West, street and road work is most active. The South is keeping up its recent gains in industrial building. All this demand naturally results in increasing cost of construction. Business, generally, is moving in greater volume than a month ago. December returns on bank debits, it is estimated, will show a seasonal increase in the turnover of money.

Calif., Glendale—Made plans 80,207 lin. ft. 8- to 24-in. vitr. sewers in various streets. Burns & McDonnell, Marsh-Strong Bldg., Los Angeles, engrs.

From Cleveland

"At no time in the development of Cleveland and vicinity has the outlook for the construction industry looked better than it does as the year 1925 gets under way. Equally important, the activity of the year 1924 offers a good basis for the prediction that the new year will be the best in the history of the community. There is enough construction work in prospect at this time to herald an even bigger year for 1925 than was obtained during 1923. This is based upon plans already formed that call for $53,000,000 construction during the first six months, or less, of 1925."

Construction News Correspondent

Ont., Toronto—East York Twp., Municipal Yard, Sammon Ave., soon takes bids 18,000 ft. 8- to 12-in. vitr. tile sewers in Woodycrest Ave. $2,200, Jones Ave. $2,145, Langford Ave. $2,119, Dawes Rd. $20,100, Thyra Ave. $6,180, and Danforth Ave. $6,544. G. R. Jack, twp. engr.

Alabama—State Hy. Dept., Montgomery, **(e. e. means engineers estimate)**, gravel surfacing 12.6 mi. Greenville-Wedgworth Rd., 18 ft., Hale Co., to E. L. Ellis, Gainsville, $94,855, e. e. $95,000; grading and gravel surfacing 15 mi. Davenport-Ft. Deposit-Montgomery Co. line Rd., 18 ft., Lowndes Co., and 9 mi. Monroeville-Camden Rd., 18 ft., Monroe Co., to N. Giddens, Troy, $214,431 and $86,289 respectively, e. e. $215,000 and $86,500 respectively; asphalt and chirt surfacing 7.16 mi. Florence-Killen Rd., 18 ft., Lauderdale Co., to Uvalde Paving Co., Insurance Bldg., Dallas, Tex., $199,525, e. e. $200,000. Noted Nov. 20.

From Chicago

"Construction is not slowing down in Chicago or Illinois; rather it is booming along much better than last winter. Next year, from reports, rumors, etc., will be bigger and better than 1924. There is $200,000,000 worth of work on which plans are already drawn, and this figure does not include the smaller flat and apartment buildings. Chicago is set for a big and prosperous year, with the brakes off and the foot on the gas."

Construction News Correspondent

Ala., Bessemer—See "Buildings-Industrial under Proposed Work."

Miss., De Kalb—Kemper Co., grading, surfacing, etc., 8.907 mi. Federal Aid Project 107-A, to Meyer & Greenwald, Meridian, Miss., $99,347. Noted Dec. 4.

Miss., Cleveland — Hushpuckana D. D., main ditches, to G. S. Funk, Shelby, and plow ditches, to Stokes Bros. & Co., Waterloo. Work involves 173,936 cu.yd. excav. Noted Dec. 11.

Unclassified

PROPOSED WORK

Cable — Massachusetts — Davis Bates Clapp Memo. Assn., plans laying and maintaining telephone cable in Hingham Bay from Crow Point, Hingham to Slate Island, Weymouth. Engineer not selected.

Sea Wall, etc.—Gloucester, Mass.—M. E. Mobiman plans fill solid and constructing sea wall in Monsons Cove. $25,000.

Wall—Melrose, Mass.—Dept. Pub. Buildings, making plans new wall and extension of present rear wall in Memorial Building. $40,500. J. R. Worcester & Co., 79 Milk St., Boston, engrs. Noted Dec. 4.

Docks — Baton Rouge, La. — Plans improving dock system. $350,000. J. W. Billingsley, Baton Rouge, consult. engr.

Underpass—Nashville, Tenn.—Davidson Co. Hy. Comn., Nashville Railway & Light Co., and Tennessee Central R.R. Co., H. R. Manby, ch. engr., 319 7th Ave., North Nashville, plan rebuilding underpass on Harding Pike at railroad crossing. $25,000.

Summer Resort—Ashtabula, O.—Woodland Beach Park Co., c/o McGarry & McGarry, archts., 4614 Prospect Ave., having plans prepared 140x180 ft. dance hall, 3 story 70x300 ft. clubhouse, bathing beach, boardwalk, skating rink, and amusement devices, Woodland Beach Park. $300,000.

Golf Course, etc. — Aurora, O. — A. B. Smythe Co., A. B. Smythe, pres., Erie Bldg., Cleveland, having sketches made 9 hole golf course, sewer and water mains, sewage disposal plant, water wells, pumps and roadways and walks, here. $300,000. Wight-O'Rourke Co., Rose Bldg., Cleveland, civil engrs.

Stadium — Oberlin, O. — Oberlin College, plans concrete and steel stadium. $52,000. Engineer not selected.

Grand Stand, etc.—Cleveland, O.—Thistledown Jockey Club Co., c/o J. H. McMellon, mgr., 917 Swetland Bldg., had plans prepared by Christian, Schwartzenberg & Gaeda, 1900 Euclid Bldg., 1 story, 183 x 290 ft., steel and timber grandstand, clubhouse and paddock building, Warrensville Center and Emery Rds. $150,000.

Seawall and Pier—Grosse Pointe Farms (branch of Detroit), **Mich.**—Made plans approximately 373 ft. seawall, incl. 300 cu.yd. concrete, also 840 ft. timber pier, etc. $25,000.

Oil Pipe Line—Texas—Humble Oil & Refinery Co., Humble Oil Co. Bldg., Houston, making plans 130 mi. pipe line from Kemper to San Angelo, etc. Private plans.

Transmission Line—Oklahoma—See "Waterworks" under Braman, Okla.

Tunnel—Oregon—City of Portland & Tunnel Dist. take bids in summer 1¼ mi. either double bore or flat arch tunnel from Portland to Mahlan Valley. $2,000,000. Address R. Tucker, chn. Mahlan Valley Tunnel Project, 395 East 16th St. N., Portland.

Power Line—Butte City, Calif.—See "Excavation, Drainage, Irrigation, Levees."

Grandstand — Los Angeles, Calif. — Los Angeles Baseball Club, 1940 South Hill St., having plans prepared by Z. T. Davis, 400 North Michigan Ave., Chicago, Ill., rein.-con. and steel grandstand, 20,000 seating capacity, plans so designed to permit additional ultimately deck at later date for 10,000 additional. Noted Oct. 2.

Golf Links—San Jose, Calif.—Commercial Club plans 18 hole golf course, drill wells, and install pumping plants, etc. $86,000.

Grain Elevator — Owen Sound, Ont. — Voted $450,000 bonds for grain elevator, 1,000,000 bu. capacity, on water front. C. Gordon, city clk. Noted Dec. 25.

BIDS DESIRED

Station Finish—Long Island City, N. Y.—Jan. 15, by Bd. Transportation, 49 Lafayette St., New York City, constructing station finish for 111th St. Sta., Queens Boro. J. H. Delaney, chn.

Heating and Ventilating—Baltimore, Md.—See "Buildings-Commercial."

Stadium—Macon, Ga.—Jan. 13, by O. Clark, city clk., for Centennial Stadium. Freeland, Roberts & Co., Independent Life Bldg., Nashville, Tenn., engrs. Noted Sept. 4.

Grade Separation—Springwells, Mich.—Jan. 27, by B. P. Esper, city clk., Municipal Bldg., constructing Schaefer Rd. and Detroit & Ironton R.R. grade separation. Hubbell, Hartgering & Roth, 2348 Penobscot Bldg., Detroit, consult. engrs.; adv. E. N.-R. Jan. 8.

BIDS RECEIVED

Heating, etc. — Elizabeth, N. J. — See "Buildings—Commercial."

Heating and Ventilating, etc.—Trenton Junction (Trenton P. O.), **N. J.** — See "Buildings—Commercial."

Plumbing—Elkins Park, Pa.—See "Buildings—Commercial."

Heating and Plumbing—Raleigh, N. C.—See "Buildings—Commercial."

Foundation—Milwaukee, Wis.—Bd. Industrial Educ., 7th and Prairie Sts., caisson and plain foundation for 3rd unit of continuation school, 7 story and basement, 150 x 210 ft., brick and concrete, 6th and Prairie Sts., from E. Steigerwald & Sons, 2303 Galena St., $127,950. Noted July 31.

CONTRACTS AWARDED

Concrete and Backfilling—Roxbury (Boston P. O.), **Mass.**—School House Dept., Boston, concrete work and backfilling on grounds of high school for girls, here, to T. O'Connor & Co., Cambridge, $25,897.

Heating and Plumbing—Brooklyn, N. Y.—See "Buildings-Commercial."

Heating, etc.—New York, N. Y.—See "Buildings-Commercial."

Heating—Salisbury, N. C.—See "Buildings—Commercial."

Piers, etc. — South Carolina — See "Bridges."

Subway—East St. Louis, Ill.—Terminal R.R. Co., Union Station, St. Louis, Mo., H. P. Pheifer, ch. engr., Pennsylvania R.R. Co., Union Station, Chicago, T. J. Skillman, ch. engr., Baltimore & Ohio R.R. Co., Merchants Loan & Trust Bldg., Chicago, H. A. Lane, Baltimore & Charles Sts., Baltimore, Md., ch. engr., and Southern R.R. Co., 13th and Pennsylvania Aves., Wash., D. C., R. Hayes, structural engr., will build 700 ft., rein.-con. subway with two 20 ft. roadways and two 5 ft. sidewalks on 9th St., here, by day labor. $500,000.

Heating and Plumbing—Muskegon, Mich.—See "Buildings—Commercial."

Plumbing and Ventilating—Springfield, Mo.—See "Buildings—Commercial."

Telephone Lines, etc.—St. Louis, Mo.—Southwestern Bell Telephone Co., Bway. and Locust Sts., will repair telephone lines, incl. repairs to 10,000 local phones, 27,000 poles, 3,500 mi. copper wire, etc., by day labor. $1,000,000.

Heating and Plumbing — Bartlesville, Okla.—See "Buildings—Commercial."

Street Lighting System — Los Angeles, Calif. — Street lighting system on Moneta Ave. between Florence and Manchester Aves., to Electric Lighting Supply Co., 214 West 3rd St., $43,542; Moneta Ave., between Main St. and Florence Ave., to Newbery Electric Corp., 724 South Olive St., $129,778; Western Ave. between Santa Barbara and Slauson Aves., to H. C. Reid & Co., 420 Grant Bldg., $81,860.

Foundation — Oakland, Calif. — General Petroleum Corp., Alaska Commrecial Bldg., San Francisco, concrete foundation, firewall, etc., for distributing plant and oil storage quarters on Parr Terminal, here, to Pan-Pacific Constr. Co., Citizens Natl. Bank Bldg., Los Angeles, approximately $123,300.

Radio Station—Drummondville, Que.—Marconi Wireless Telegraph Co., 111 St. Sacrament St., Montreal, constructing radio transmitting station, to A. F. Byers & Co., Ltd., 340 University Ave., Montreal, $155,000.

Material and Equipment

PROPOSED WORK

Tar Patch—Trenton, N. J.—Bd. Freeholders Mercer Co., plans to purchase 50,000 gal. tar patch for roads. $10,000. H. F. Harris, Court House, engr.

Road Machinery—Wisconsin—Eu Claire Co. appropriated $25,000 for road machinery during 1925, G. Osborne, comr.; Outagamie Co. $20,000, incl. power patrol grader and stone crusher, A. G. Brusewitz, comr.; Sauk Co. appropriated sufficient money to purchase drag line, 6 patrol graders and scrapers. W. Halberslaben, comr.

Road Machinery—Wisconsin—Juneau Co. appropriated $10,000 for road machinery, incl. 1 crushing outfit, E. T. Klug, Juneau, comr.; Burnett Co. $5,000, incl. several patrol graders, G. E. Miller, Webster, comr.; Bayfield Co. $7,500, incl. several patrol graders, J. Friberg, Washburn, comr.

Graders—Balsam Lake, Wis.—Polk Co., C. Nystrom, highway comr., plans to purchase 1 large and several patrol graders.

Road Machinery — Darlington, Wis. — Lafayette Co. appropriated $5,000 for road machinery, incl. tractor, graders and small tools. H. I. Shockley, Darlington, comr.

Road Machinery—Hudson, Wis.—Saint Croix Co. appropriated $6,000 for road machinery, incl. patrol graders and small tools. H. P. Olson, Hammond, comr.

Trenching Machine, etc.—Kenosha, Wis.—C. M. Osborn, city mgr., soon takes bids trenching machine to dig (maximum) trench 10 ft. deep, 30 in. wide; also 1 backfiller, 1 ton truck and two 1 ton truck chassis.

Gate Valves, etc.—Dallas, Tex.—M. G. James, city secy., soon takes bids twelve 12 in. and twenty-five 8 in. H. E. gate valves, $5,000; 350 tons 12 in. Class B, c.i. pipe, etc. E. A. Kingsley, city engr.

Fire Truck — McAlester, Okla. — See "Waterworks."

Street Sweeper—Tulare, Calif.—Plans to purchase 1 Elgin Motor Pickup Sweeper equipped with 1 extra broom. W. J. Andrews, city mgr.

BIDS DESIRED

Asphalt Sand, etc. — Brooklyn, N. Y. — Jan. 14, by E. Riegelmann, boro. pres., Boro Hall, 10,000 cu.yd. asphalt sand, and 10,000 cu.yd. steam cinders.

Pipe, etc.—New York, N. Y.—Jan. 14, by J. E. Bowe, comr. Dept. Purchase, Municipal Bldg., c.i. pipe, castings, hydrants, valves, etc., for Dept. Water Supply.

Stone Crushing Plant — Hollidaysburg, Pa.—Jan. 14, by Comrs. Blain Co., one rock crusher 10x20 in. or larger, having 16 to 24 tons per hour, equipped with manganese dies, one 14 in. x 24 ft. elevator complete with folding device, crusher mounted on steel truck with stub tongue, also 10 ft. revolving screen, 36 in. diam., gear driven, perforated as follows, 6 ft. of ¾ in. carrying 30 in. dust jacket fitted on 4 ft. of perforation (3 in.) together with necessary belting and driving chains for crusher to screen and elevator. C. F. Stout, Hollidaysburg, engr.

Steam Shovel, etc.—Columbus, O.—Jackson Pike Sand & Gravel Co., 576 North High St., in market for one 20-ton steam shovel, 2 loading machines, 2 crushers, 1 conveyor, and 1 masher. J. F. Baird, genl. mgr.

Road Roller—Iron Mountain, Mich.—H. C. Lindholm, city clk., in market for road roller.

Excavators, etc.—London, Ont.—Ontario Farmers Drainage Co., 110 Dundas St., wants prices on excavators and drainage equipment.

Crushers—Toronto, Ont.—Peerless Artificial Stone, Ltd., Coxwell Ave., in market for crushers with 8 x 12 in. jaws.

Pipe—Point Grey, B. C.—Jan. 12, by Council, 3,500 ft. 4 in., 20,000 ft. 6 in., 6,000 ft. 8 in. and 750 ft. 10 in. steel or wrought iron pipe. $40,000. W. Greig, 5851 West Boulevard, Vancouver, engr.

Coal Loader—Two Harbors, Minn.—Jan. 12, coal loader with gas driven and electric motors. E. Carlson, city clk.

Grader—Houston, Tex.—H. L. Washburn, aud. Harris Co., taking bids for road grader as per specifications of county engineer. $1,500.

Generator—Stillwater, Okla.—Jan. 16, by G. E. Watkins, city clk., new 750 kw. or 937 kva. steam turbine generator unit, with foundations, condenser pumps and power wiring unit. $55,000. J. W. McLendon, Stillwater, engr.

BIDS RECEIVED

Pipe—Baltimore, Md.—Bd. Awards, furnishing and loading rein.-con. pipe, from Core Joint Concrete Pipe Co., Irvington, N. J., $49,450.

CONTRACTS AWARDED

Asphaltic Cement, etc.—New York, N. Y.—J. Miller, pres. Manhattan Boro., Municipal Bldg., 600,000 gal. asphaltic cement, to Warner-Quinlan Co., 79 Wall St., $40,930; 20,000 cu.yd. asphalt sand, to Z. Mahoney, 557 46th St., Brooklyn, $21,800; 20,000 bags Portland cement, to Terminal Supply Co., 350 Madison Ave., $14,160; 30,000 gal. gasoline, to Bang Serv. Sta., Inc., Arden St. and Bway., $3,870. Noted Jan. 1.

Cable and Weatherproof Wire — Milwaukee, Wis.—Central Bd. Purchases., 30,000 ft. No. 10 wire, to J. Andrae & Sons, 362 Bway., $1,073; 10,000 lbs. weatherproof wire, to General Electric Co., 217 Sycamore St., $320; 27,000 ft. paper insulated wire, to Western Electric Co., 460 Milwaukee St., $13,640. Noted Dec. 18.

OFFICIAL PROPOSALS

Bids: Jan. 27.

Conduit

CONTRACT 219

New York, N. Y.

SEALED BIDS will be received by the Board of Water Supply, at its offices, twenty-second floor, Municipal Building, Park Row, Centre and Chambers streets, New York City, until 11 a.m., Eastern Standard time, on Tuesday, January 27, 1925, for Contract 219, for the construction of Section 1 of the Williamsburg conduit, a portion of the City conduits of the Catskill aqueduct, extending from Shaft 24 of the City tunnel in Fort Greene park along Myrtle, North Portland, Park, Franklin and Wythe avenues and Hooper, South 1st, Maujer and Leonard streets to a point in Leonard street about 115 feet south of Metropolitan avenue, in the Borough of Brooklyn, New York City.

The conduit will consist of about 15,250 linear feet of 72-inch steel pipes, about 250 tons of cast-iron pipes and special castings of various sizes, a Venturi meter, valves and other appurtenances, all of which will have to be maintained for one year.

At the above place and time the bids will be publicly opened and read. Pamphlets containing information for bidders, forms of bid and contract, specifications, contract drawings, etc., can be obtained at the office of the Secretary at the above address, by depositing the sum of ten dollars ($10) in cash or its equivalent for each pamphlet. For further particulars apply to the office of the Chief Engineer at the above address.

GEORGE J. GILLESPIE,
President,
JAMES P. SINNOTT,
PHILIP F. DONOHUE,
Commissioners, Board of Water Supply.
BENJ. F. EINBIGLER,
Secretary.

Bids: Feb. 17.

Bascule Bridges

Tampa, Fla.

Sealed proposals, addressed to the City Commission, Tampa, Florida, for the construction of bridges over Hillsborough River at Cass Street and at Platt Street in the City of Tampa, Florida, will be received by the City Commission, City Hall, Tampa, Florida, until 11:00 a.m., February 17, 1925, and not thereafter, and at that time will be publicly opened and read. Said proposals should be indorsed "Proposal for construction of bridges at Cass Street and at Platt Street."

Plans, specifications, form of proposal, bond and contract for the work are on file in the office of the City Engineer, City Hall, Tampa, Florida, and may be there seen.

Copies of plans and specifications may be obtained from the City Engineer or from The Strauss Bascule Bridge Company, 225 North Michigan Avenue, Chicago, Illinois, upon written application therefor and the deposit of Thirty Dollars ($30.00), Twenty Dollars ($20.00) of which sum will be refunded upon return of the plans and specifications in good condition within forty-five (45) days time following the opening of bids.

Each of the two (2) bridges has a channel span consisting of a double-leaf, underneath counterweight type of Strauss Trunnion Bascule Bridge measuring one hundred twenty-five feet (125' 0") center to center of main trunnions, flanked on each side with reinforced concrete spans and retaining walls, the over-all length of the structures being approximately five hundred fifty feet (550' 0") at Cass Street and approximately seven hundred feet (700' 0") at Platt Street, each structure providing a forty foot (40' 0") roadway and two (2) eight foot (8' 0") sidewalks.

All proposals must be made upon blank forms attached to the specifications. Each bid is to be presented enclosed in sealed envelopes furnished by the City of Tampa for this purpose, indorsed as above provided, and filed with the City Commission, City Hall, Tampa, Florida, and shall be accompanied by a certified check or bid bond made payable to the City of Tampa for an amount equal to ten per cent (10%) of the amount of the total bid, and no bid shall be considered unless such check or bid bond is enclosed therewith. Such certified check or bid bond shall be delivered upon condition that if said bid be accepted, the party bidding will promptly and properly enter into and execute a contract and bond in accordance with the award. Should the successful bidder to whom the contract is awarded fail to execute the same within ten (10) days, not including Sunday or Legal Holidays, from the date of notification of such award, such security shall be forfeited to the City of Tampa as liquidated damages, and the same shall become the property of the City of Tampa. Certified checks or bid bonds of the unsuccessful bidders will be returned to the bidders who submitted them.

A good and sufficient Surety Company's bond, acceptable to the City Commission of the City of Tampa, Florida, will be required for the faithful performance of the construction contract in a sum equal to fifty per cent (50%) of the amount of the contract price.

Contract and bond shall be approved by the City Commission and executed for the City of Tampa by the Mayor Commissioner.

The City of Tampa reserves the right to waive formalities and reject any and all bids.

Fire Protection

ROME STATE SCHOOL

Rome, N. Y.

Sealed proposals for Water Supply for Fire Protection, Rome State School for Mental Defectives, Rome, N. Y., will be received by Superintendent of Purchase, Department of Architecture, Room 408, Capitol, Albany, N. Y., until 3 o'clock p.m., on Thursday, January 22nd, 1925, when they will be publicly opened and read. Proposals shall be enclosed in an envelope furnished by the State Architect, sealed and addressed, and shall be accompanied by a deposit as a guarantee that bidder will enter into contract if awarded same. Deposit shall consist of a certified check drawn upon some legally incorporated bank in this State and made payable to the State of New York or money equal to Six Hundred Dollars (600.00). The contractor to whom the award is made will be required to furnish surety company bond in the sum of fifty per cent (50%) of the amount of contract within thirty days after official notice of award of contract and in accordance with the terms of Specification No. 4434. The right is reserved to reject any or all bids. Drawings and specifications may be examined at the Rome State School for Mental Defectives, Rome, N. Y., at the New York Office of the Department of Architecture, 18th Floor, Fuller Building, Broadway and 23rd St.; and at the Department of Architecture, Capitol, Albany, N. Y. Drawings, specifications and blank forms of proposal may be obtained at the Department of Architecture, Capitol, Albany, N. Y., upon request.

Dated: December 12, 1924.

OFFICIAL PROPOSALS

Bids: Jan. 21.

Heating Work

STATE HOSPITAL

Buffalo, N. Y.

Y., at the New York Office of the Department of Architecture, 18th floor, Fuller Building, Broadway and 23rd St., and at the Department of Architecture, Capitol, Albany, N. Y. Drawings, Specifications and blank forms may be obtained at the Department of Architecture, Capitol, Albany, N. Y., upon request.

Dated: December 12th, 1924.

CONSTRUCTION NEWS

Engineering News-Record, January 15, 1925

The Construction Barometer

Large Public Buildings Hold Lead Over Other Commercial Types In Number and Value of Weekly Lettings

PUBLIC buildings, valued at $150,000 and over, continue to hold the lead over other buildings of a commercial nature. This is shown by consistent gains, recorded from week to week, in value of contracts let since Dec. 18. During the second week in January the number of lettings also began to increase in this class of construction. While the public building situation is nationwide in scope, there are steady upward tendencies noted in certain localities as applied to other classifications. The volume of street and road work, for instance, is increasing in the South; private commercial building contracts are becoming more numerous in the states immediately west of the Mississippi; sewer construction shows greater activity in the Far West. Increased cost has not inhibited the growth of volume.

Engineering News-Record Statistics

Minimum on water-works and excavations, $15,000; other public work, $25,000; industrial buildings, $40,000; commercial buildings, $150,000.

Value of Large Contracts Let In The United States

From Birmingham

"From present indications 1925 will be the greatest building year Birmingham has ever known. As regards labor, there are no strikes and no likelihood of strikes in 1925. As a general thing, the free municipal employment agency has more jobs to offer than men and women to fill them."

Construction News Correspondent

PROPOSED WORK

Playground—Charlestown (Boston P. O.) **Mass.**—Street Laying Out Dept., City Hall, Boston, plans playground on land bounded

Unclassified (Continued)

by Cross St., Cross St. Ave., Cedar St. and Cross St. Court, here. $25,000. J. F. Sullivan, secy.

Land Development, etc.—Lowell, Mass.—See "Buildings—Commercial."

Playground—Newton, Mass.—Bd. Aldermen plan reconstructing Victory Field and Allston, Park, California St., Nonantum Dist., here, as playground. $25,000 or more. Engineer not selected. E. Hermann, supt. City Playgrounds.

Park—Norwood, Mass.—Bd. Selectmen plans developing 10 acres off Winter St. for public recreation park. $25,000. Engineer not selected.

Storage Tank—New Britain, Conn.—New Britain Gas Light Co., plans steel storage tank, 2,000,000 cu.ft. capacity, Cherry and Lilac Sts. $200,000. H. T. Sloper, mgr.

Stadium—Madison, Wis.—City, c/o H. C. Buser, city clk., plans rein.-con. and steel stadium at Stevens Athletic Field. $25,000. Engineer not selected.

Light and Power Extensions, etc.—Missouri and Illinois—Union Electric Light & Power Co., 12th and Locust Sts., St. Louis, Mo., plans to expend more than $11,000,000 for improvements and extensions, incl. laying 6 new cables on bottom Mississippi River connecting St. Louis with power plant at Cahokia, Ill., converting St. Charles St. and Lucas Ave. substations into automatic substations, doubling capacity of Kingshighway Blvd. substation, increasing capacity of Chippewa, Enright, Penrose, Page Ave. and South Bway. substations, $1,630,000; new distribution lines and placing some lines underground $1,385,000, extending service lines in St. Louis Co., $620,000, and similar extensions elsewhere in Missouri, $180,000; remodeling office building on 12th Blvd. to convert space now used as theatre into offices, $760,000; 35 mi. transmission line from Crystal City, Mo., to Cahokia, Ill., plant, $1,000,000. L. H. Egan, pres.

Steam Line—St. Louis, Mo.—See "Buildings—Industrial."

Underpass—Houston, Tex.—See "Streets and Roads."

Wharf—Martinez, Calif.—Associated Oil Co., 79 New Montgomery St., San Francisco, having preliminary plans prepared wharf, Bulls Head Point. $100,000. Private plans.

Asphalt Plant—Santa Rosa, Calif.—Clark and Henery Constr. Co., Chancery Bldg., San Francisco, plans asphalt plant. $25,000.

Wharf—Cap-de-la-Madeleine, Que.—Three Rivers Harbor Comn., Three Rivers, plans crib wharf. $200,000. B. Grandmont, Three Rivers, engr.

Power Development — Nipigon, Ont. — Hydro Electric Power Comn. of Ontario, 190 University Ave., Toronto, plans diversion of Albany River and its waters into Lake Nipigon, here, to increase water supply for plants at Cameron Falls. $1,000,000. F. A. Gaby, c/o owner, ch. engr.

Memorial — Ottawa, Ont. — Dept. Pub. Wks. will soon call for designs for War Memorial, on Connaugh Pl. $100,000.

Conduits, Underground Cables, etc. — Toronto, Ont.—Bell Telephone Co., 76 Adelaide St. W., plans new conduits, underground cables, etc., also new exchanges on Asquith St. and Runnymede Rd. $750,000. F. Kennedy, mgr.

Mains—Point Grey, B. C.—British Columbia Electric Ry. Co., 425 Carrol St., Vancouver, making plans 3 mi. 12 in. mains in March to University site. $75,000. J. Keillor, c/o owner, engr.

BIDS DESIRED

Heating Work—Ogdensburg, N. Y.—Feb. 4, by State Hospital Comn., Albany, heating work, high pressure steam mains, in St. Lawrence State Hospital, here; adv. E. N.-R. Jan. 15.

Fire Sprinklers—Rochester, N. Y.—Feb. 4, by State Hospital Comn., Albany, automatic fire sprinklers in Rochester State Hospital, here; adv. E. N.-R. Jan. 15.

Borings—Phila., Pa.—Feb. 3, at Room 216, City Hall, core borings in Schuylkill River, at site of proposed bridges at Penrose and University Aves. G. H. Biles, dir. Pub. Serv.; adv. E. N.-R. Jan. 15.

Lighting System—Wetumka, Okla.—See "Waterworks."

Street Lighting System — Los Angeles, Calif. — Bd. Pub. Wks. taking bids 88 pressed steel standards on Beverly Blvd. between Vermont and Western Aves., 21 concrete standards on Mullen Ave. between Wilshire and Country Club Dr., 50 on 16th St. between Hoover and Berendo Sts., and 18 on Windsor Blvd. between Clinton and Beverly Blvd.; 106 c.i. standards on 6th St. between Vermont Ave. and Gramercy Pl. To exceed $75,000. Noted Dec. 4.

Tanks—Montreal, Que.—Imperial Oil Co., 918 St. Patrick St., taking bids erecting 2 new tanks, each 82,000 bbl. capacity.

BIDS RECEIVED

Fire System — Brooklyn, N. Y. — B. S. Coler, comr. Dept. Pub. Welfare, Municipal Bldg., New York City, Jan. 7, fire alarm system in Kings Co. Hospital, here, from Jandous Electric Equipment Co., 109 West 31st St., New York City, $45,300. Noted Jan. 1.

Heating and Ventilating, etc.—Brooklyn, N. Y.—See "Buildings—Commercial."

Subway—Long Island City, N. Y.—Bd. Transportation, Municipal Bldg., New York City, Jan. 9, tracks for portion of Flushing extension of Queensboro subway line, Queens Boro, from T. H. Reynolds Contg. Co., 50 Park Pl., New York City, $193,805. Noted Jan. 1.

Borings—New York, N. Y.—Bd. Transportation, Municipal Bldg., Jan. 9, making borings along West Bway., Greenwich, 6th and 8th Aves., East 53rd, Wall, Fulton, Church, Houston and Worth Sts., Agreement "DQ," Manhattan Boro., from Osborne Drilling Co., 120 Liberty St., $53,173; also miscellaneous construction providing sewer and water connections at various locations, Agreement "DQ," Bronx Boro, from Fox Reynolds Co., 81 East 125th St., $7,615. Noted Jan. 1.

Heating—Phila. Pa.—See "Buildings—Commercial."

Sheet Metal Work—New Orleans, La.—Bd. Port Comrs., New Court House Bldg., Jan. 7, sheet metal work and glazing skylights on Claiborne Ave. shed, from R. G. Holzer Estate, New Orleans, $28,066. Noted Jan. 1.

Coal Handling Equipment—Detroit, Mich.—Pub. Lighting Comn., East Atwater St., coal braker, conveyors and other coal handling equipment for public lighting plant, from Link Belt Co., 5938 Linsdale Ave., $75,927.

CONTRACTS AWARDED

Foundation—Springfield, Mass.—T. M. O'Leary, State St., foundation for 2 story and basement, brick and timber school, Linden and Everett Sts., to D. J. Donahue, 39 Forest Park Ave.

Heating and Plumbing—Elkins Park, Pa.—See "Buildings-Commercial."

Coke Ovens—East Thomas (Birmingham P. O.), **Ala.**—Republic Iron & Steel Co., larger type of by-product copper ovens, to Kopper Co., Union Trade Bldg., Pittsburgh, Pa., $2,000,000. Noted Jan. 1.

Grand Stand, etc. — Cleveland, O. — Thistledown Jockey Club Co., c/o J. H. McMillan, 917 Swetland Bldg., grand stand, paddock and clubhouse, also grading for race track, Emery Rd., to Natl. Iron & Wire Co., Lakeside Ave. Archts. est. $150,000. Noted Jan. 8.

Heating and Ventilating—Pekin, Ill.—See "Buildings—Commercial."

Distribution Mains — St. Louis, Mo. — Laclede Gas Light Co., 11th and Olive Sts., will construct 42.23 mi. 4, 6 and 12 in. distribution mains, 66.49 m.i service connections, 26,200 ft. 30 in. main connecting coke plant in Carondelet with distribution system on Bancroft Ave., and improve various stations, etc., by day labor. $3,000,000.

Sand Cleaning Plant—Corona, Calif.—Pacific Silicate Sand Co., 30 x 60 ft., timber sand cleaning plant and equipment, to Southwestern Eng. Corp., Hollingsworth Bldg., Los Angeles. Engrs. est. $40,000.

Street Lighting System—Los Angeles, Calif.—Street lighting system on Figueroa St. between 11th and Adams Sts., to R. A. Wattson, 1026 McCadden Pl., $78,351; 8th St. between Figueroa and Vermont Ave., also Citrus Ave. between 3rd St. and Wilshire Blvd., to G. W. Kemper, P. O. Box 126, Alhambra, $77,777 and $17,428 respectively; El Centra Ave. between Hollywood and Santa Monica Blvds. and Main St. between 36th Pl. and 57th St., to J. C. Perry, 731 Detwiler Bldg., $11,177 and $66,765 respectively. Noted Nov. 13.

Cribwork—Three Rivers, Que.—International Paper Co., Three Rivers, will build cribwork, by day labor. $500,000. J. Bourgeois, Three Rivers, engr.

Material and Equipment

PROPOSED WORK

Gravel Crushing Outfit—Wautoma, Wis.—Waushara Co. soon takes bids gravel crushing outfit. F. Grimm, highway comr.

Tractor, etc.—Wisconsin Rapids, Wis.—Wood Co. soon takes bids 10-ton tractor and patrol equipment. E. Morris, highway comr.

Engine, etc.—Pearsall, Tex.—See "Buildings-Industrial."

Pipe and Fittings — Glendale, Calif. — Plans to purchase 20,000 ft. 6 in. Class B, 20,000 ft. 8 in. Class B, 2,000 ft. 8 in. Class C, 2,000 ft. 12 in. Class B, and 4,400 ft. 12 in. Class D c.i. pipe, also 20 tons Class D fittings. A. J. Van Wie, city clk.

Steam Shovel and Dump Carts — San Diego, Calif. — Common Council appropriated $18,000 to purchase steam shovel and 3 dump carts. F. A. Rhodes, city mgr.

BIDS DESIRED

Cement, Gravel, etc.—Brooklyn, N. Y.—Jan. 21, by J. A. Guider, boro pres., Boro Hall, 8,000 bbl. Portland cement, 4,000 cu. yd. gravel, 4,000 cu.yd. broken stone, 2,000 cu.yd. sand grit, 5,000 cu.yd. paving and concrete sand, 2,000 cu.yd. 1½ in. and 1,500 cu.yd. ¾ in. broken stone, 80,000 gal. asphaltic macadam binder, 500,000 gal. asphalt road oil, 400,000 gal. asphaltic cement, 2,000 tons limestone, 300 tons paving pitch, and 4,000 cu.yd. binder stone.

Cement, Trucks, etc.—New York, N. Y.—Jan. 19, by J. Miller, pres. Manhattan Boro, Municipal Bldg., 20,000 bbl. Portland cement, 6 motor trucks, 3 portable air compressors, 3 tandem steam rollers, and 14 steel dumping bodies.

Trucks—Georgia—Feb. 6, by State Hy. Dept., East Point, 40 or more 1 ton low speed trucks, hardwood cabs and steel or wood dump bodies, 1 gripped with pneumatic tires; 40 or more 1 ton low speed trucks, without cabs or bodies, 1 gripped with pneumatic tires; 40 or more cabs of hard wood; 40 or more dump bodies, either wood or steel. Second hand material to be traded in on trucks. W. R. Neal, highway engr.

Rip Rap, Stone, etc.—New Orleans, La.—Jan. 29, by H. S. Bennion, engr. 4th Mississippi Dist., 140 Decatur St., furnishing rip rap, one man stone, concrete, or slag as follows: 10,000 tons delivered to New Orleans, 15,000 tons delivered to Vidalia, and 5,000 tons to Vicksburg, Miss., or Delta, La.

Crane—Canton, O.—United Alloy Steel Corp., 1940 Harrison Ave., in market for 10 ton crane to go in truck run way building. G. A. Charls, purch. agt.

Cranes, etc.—Youngstown, O.—Carnegie Steel Co., Carnegie Bldg., Pittsburgh, Pa., taking bids 4 cranes, 1 electric clamshell bucket, for McDonald Wks., Salt Spring Rd., here. C. Miller, purch. agt.

Road Machinery—Jefferson, Wis.—Jan. 20, by R. D. Royce, highway comr., Fort Atkins, twenty-four 9 ft. slip scrapers with runners on extra bottom, 4 patrol graders, 1 back sloper for Adams No. 8 grader, 6 dozen shovels, 24 bits for wheelscrapers, for Jefferson Co. Noted Dec. 25.

Conveyors, etc.—Madison, Wis.—Castle & Doyle Co., 125 State St., taking bids material and equipment, incl. conveyors, etc., for gravel bin.

Sand and Gravel—Minneapolis, Minn.—Jan. 23, by F. S. Gram, city purch. agt., 7,500 cu.yd. sand, and 15,000 cu.yd. gravel, for Water Dept. N. W. Elsberg, city engr.

Tractors—Ballinger, Tex.—Feb. 10, by P. Trimmier, judge Runnells Co., several 10 ton caterpillar tractors and accessories.

Tractors—Hillsboro, Tex.—Jan. 26, by M. Clyette, aud. Hill Co., one or more caterpillar tractors.

CONTRACTS AWARDED

Pipe—Baltimore, Md.—Bd. Awards, furnishing and loading rein.-con. pipe, to Core Joint Concrete Pipe Co., Irvington, N. J., for Highways Engineer. $49,450. Noted Jan. 8.

Cement—Minneapolis, Minn.—For 30,000 bbls. Portland cement to each of following: Landers - Morrison - Christensen Co., 800 Builders Exch., P. G. Speakes Co., 2845 2nd Ave. S., and Minneapolis Builders Supply Co., 721 Lumber Exch.; 10,000 bbls., to L. W. Northfield Co., 2542 Central Ave., 5,000 bbls., to Twin City Brick Co., 816 1st National-Soo Line Bldg.; 20,000 bbls., to Thompson Yards, 2694 University Ave., St. Paul, all $2.37 per bbl. Noted Jan. 1.

Castings, etc.—Minneapolis, Minn.—To Baker Valve Co., 1855 East 28th St., rings and covers $62, catchbasins $64, and covers $64; to Streator Clay Mfg. Co., 813 Guardian Life Bldg., St. Paul, 300,000 vitr. paving bricks, $19.25 per M.

OFFICIAL PROPOSALS

Bids: Feb. 4.

Buildings

Kings Park, N. Y.

Sealed proposals for Construction, Buildings A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R and T, Soldiers and Sailors Memorial Hospital Division Kings Park State Hospital, Kings Park, N. Y., will be received by the State Hospital Commission, Capitol, Albany, N. Y., until 3 o'clock p.m., Wednesday, February 4, 1925, when they will be publicly opened and read. Proposals shall be enclosed in an envelope furnished by the State Architect, sealed and addressed, and shall be accompanied by a deposit consisting of a certified check drawn upon some legally incorporated bank in this State and made payable to the State of New York, or money, in the sum of $125,000.00 The contractor to whom the award is made will be required to furnish surety company bond in the sum of fifty per cent (50%) of the amount of contract within thirty (30) days after official notice of award of contract and in accordance with the terms of Specification No. 4247. The right is reserved to reject any or all bids. Drawings and specifications may be examined at Kings Park State Hospital, Kings Park, N. Y.; at the New York Office of the Department of Architecture, 18th Floor, Fuller Building, Broadway and 23rd Street; and at the Department of Architecture, Capitol, Albany, N. Y. Drawings, specifications and blank forms of proposal may be obtained at the Department of Architecture, Capitol, Albany, N. Y., upon the deposit of a certified check in the sum of $100.00, made payable to the State of New York, for each set of Construction drawings and specifications, which check will be returned if the drawings and specifications are received in good condition by the State Architect, Sullivan W. Jones, Capitol, Albany, N. Y.

Dated: January 5, 1925.

STATE HOSPITAL COMMISSION.

Bids: Feb. 4.

Fire Sprinklers

Rochester, N. Y.

Sealed proposals for Automatic Fire Sprinklers, Rochester State Hospital, Rochester, N. Y., will be received by the State Hospital Commission, Capitol, Albany, N. Y., until 3 o'clock p.m., on Wednesday, February 4, 1925, when they will be publicly opened and read. Proposals shall be enclosed in an envelope furnished by the State Architect, sealed and addressed, and shall be accompanied by a deposit as a guarantee that the bidder will enter into contract if it be awarded to him. Deposit shall consist of a certified check drawn upon some legally incorporated bank in this State and made payable to the State of New York, or money equal to five per cent (5%) of the amount of the bid. The Contractor to whom the award is made will be required to furnish surety company bond in the sum of fifty per cent (50%) of the amount of contract within thirty (30) days after official notice of award of contract and in accordance with the terms of Specification No. 4415. The right is reserved to reject any or all bids. Drawings and Specifications may be examined at the Rochester State Hospital, Rochester, N. Y., at the New York office of the Department of Architecture, 18th Floor, Fuller Building, Broadway and 23rd St., and at the Department of Architecture, Capitol, Albany, N. Y. Drawings, specifications and blank forms of proposal may be obtained at the Department of Architecture, Capitol, Albany, N. Y.

Dated: December 23, 1924.

OFFICIAL PROPOSALS

Bids: Jan. 27.

Conduit

CONTRACT 219

New York, N. Y.

SEALED BIDS will be received by the Board of Water Supply, at its offices, twenty-second floor, Municipal Building, Park Row, Centre and Chambers streets, New York City, until 11 a.m., Eastern Standard time, on Tuesday, January 27, 1925, for Contract 219, for the construction of Section 1 of the Williamsburg conduit, a portion of the City conduits of the Catskill aqueduct, extending from Shaft 24 of the City tunnel in Fort Greene park along Myrtle, North Portland, Park, Franklin and Wythe avenues and Hooper, South 1st, Maujer and Leonard streets to a point in Leonard street about 115 feet south of Metropolitan avenue, in the Borough of Brooklyn, New York City.

The conduit will consist of about 15,250 linear feet of 72-inch steel pipes, about 250 tons of cast-iron pipes and special castings of various sizes, a Venturi meter, valves and other appurtenances, all of which will have to be maintained for one year.

At the above place and time the bids will be publicly opened and read. Pamphlets containing information for bidders, forms of bid and contract, specifications, contract drawings, etc., can be obtained at the office of the Secretary at the above address, by depositing the sum of ten dollars ($10) in cash or its equivalent for each pamphlet. For further particulars apply to the office of the Chief Engineer at the above address.

GEORGE J. GILLESPIE,
President,
JAMES P. SINNOTT,
PHILIP F. DONOHUE,
Commissioners, Board of Water Supply.
BENJ. F. EINBIGLER,
Secretary.

Bids: Feb. 3.

Filter Sand and Gravel

Buffalo, N. Y.

Sealed proposals for furnishing and delivering the necessary sand and gravel for the filter plant, City of Buffalo endorsed "Filter Sand and Gravel, contract No. 23, Buffalo Filter Plant" will be received by the Commissioner of Public Works at his office in the Municipal Building until 11 a.m. on February 3, 1925, and at that time will be publicly opened and read.

The work to be done under this contract includes the furnishing and delivering, screening, washing and placing of approximately 4,650 cu.yds. of filter sand and 2,500 cu.yds. of filter gravel.

Each bid must be accompanied by a certified check upon an acceptable national bank or trust company made payable to the Commissioner of Public Works of the City of Buffalo, N. Y., in an amount of 15% of the total amount of the proposal. Checks of all unsuccessful bidders will be returned upon demand upon the execution of the contract and the furnishing of security.

A bond in the sum of 100% of the proposal with a satisfactory surety company as surety will be required conditioned upon the faithful performance of the work, said bond to remain in force for one year after the final completion and acceptance of the work.

Copies of plans and specifications may be seen at the office of the Commissioner of Public Works, Buffalo, N. Y., and copies of plans, specifications and form of proposals may be obtained at said office.

WILLIAM F. SCHWARTZ,
Commissioner of Public Works.
GEORGE C. ANDREWS,
Filtration Engineer.

OFFICIAL PROPOSALS

Bids: Feb. 4.

State Hospital Work

Ogdensburg, N. Y.

Sealed proposals for Heating Work, High Pressure Steam Mains, St. Lawrence State Hospital, Ogdensburg, N. Y., will be received by the State Hospital Commission, Capitol, Albany, N. Y., until 3 o'clock p.m., on Wednesday, February 4th, 1925, when they will be publicly opened and read. Proposals shall be enclosed in an envelope furnished by the State Architect, sealed and addressed, and shall be accompanied by a deposit as a guarantee that bidder will enter into contract if awarded same. Deposit shall consist of a certified check drawn upon some legally incorporated bank in this State and made payable to the State of New York, or money equal to five per cent (5%) of the amount of the bid. The contractor to whom the award is made will be required to furnish surety company bond in the sum of fifty per cent (50%) of the amount of contract within thirty days after official notice of award of contract and in accordance with the terms of Specification No. 4446. The right is reserved to reject any or all bids. Drawings and specifications may be examined at the St. Lawrence State Hospital, Ogdensburg, N. Y., at the New York Office of the Department of Architecture, 18th floor, Fuller Building, Broadway and 23rd St.; and at the Department of Architecture, Capitol, Albany, N. Y. Drawings, specifications and blank forms of proposal may be obtained at the Department of Architecture, Capitol, Albany, N. Y.

Dated: December 31st, 1924.

Bids: Jan. 23 and 24.

Highway Work

Harrisburg, Pa.

Pennsylvania Department of Highways, Harrisburg, Pa. Bids will be received January 23 and 24, 1925, for construction of thirty-two projects, totaling one hundred thirty-five miles, construction to be reinforced concrete. Projects situated in the following counties:

Allegheny	Indiana
Beaver	Luzerne
Bedford	Mercer
Berks	Perry
Bradford	Potter
Butler	Somerset
Clarion	Susquehanna
Clearfield	Warren
Crawford	Washington
Elk	Wyoming
Franklin	York
Greene	

Full particulars upon application to W. H. Connell, Engineering Executive and Deputy Secretary of Highways, Harrisburg, Pennsylvania.

Bids: Feb. 3.

Core Borings

BUREAU OF ENGINEERING
DEPARTMENT OF PUBLIC WORKS

Philadelphia, Pa.

Sealed proposals will be received at Room 216, City Hall, until 12 o'clock noon on February 3, 1925, and opened at that time in Room 216, City Hall, for Core Borings in the Schuylkill River at Site of Proposed Bridges at Penrose Avenue and University Avenue (near 34th Street).

All proposals must be accompanied by a certified check in the amount of five (5) per cent of the bid, in accordance with the ordinance of March 7, 1924.

GEORGE H. BILES,
Director.

Inquire at Room 416, City Hall.

CONSTRUCTION NEWS

The Construction Barometer

Increase in Number of Large Projects on Which Bids Are Desired—Materials Prices Firm—With Exception of Steel, Production Has Not Yet Passed Low Point of Mid-Winter

LETTINGS for private commercial buildings are gaining steadily throughout the entire country. This applies to the number of awards and not to money value of contracts let. Consistent gains are also noted in the number of jobs on which bids are desired, for commercial building construction and all types of private and public work. Locally, the volume of street and road work is increasing in the South. The same is true of sewers, streets and roads in the section immediately west of the Mississippi. Water-works lettings are more active in the Middle West; private building awards in the eleven Northeastern states. During the next thirty days the extreme low point of mid-winter production will have been reached and passed. After that most of the basic materials will probably follow steel in the upward trend of output.

Engineering News-Record Statistics

Minimum on water-works and excavations, $15,000; other public work, $25,000; industrial buildings, $40,000; commercial buildings, $150,000.

Value of Large Contracts Let In The United States

Week Ended	Public Work	Private Work	Total Contracts

Waterworks

PROPOSED WORK

N. J., Margate—See "Sewers."

Pa., Phila.—See "Bids Received."

N. C., Raleigh—See "Unclassified."

La., Jonesville—Election Jan. 27, $40,000 bonds for waterworks and electric light systems. F. P. Joseph, Glenmora, consult. engr.

O., Cleveland—Takes bids in spring 11,000 ft. 24 in. steel or c.i. main in Clifton Blvd. from Warren Rd. to Rocky River, $157,000; 7,980 ft. 36 in. steel or c.i. main in Ridge Rd. from Memphis Ave. to Brookpark, Sect. 4. $170,000. A. V. Ruggles, City Hall, engr.

O., Cleveland — Takes bids in summer new brick, steel and concrete centrifugal pumping station, $400,000; 12,250 ft. 48 in. raw mains from Kirtland Station to Superior Ave. and Ansel Rd., $362,500; 15,110 ft. 36 in. low service main from Division Station, West 117th St., $325,000. A. V. Ruggles, City Hall, engr.

Ill., Highland—Voted $175,000 bonds for waterworks, of which $50,000 will purchase property and $125,000 for plant, pumps, tank on tower, distribution system, etc. C. E. Wilson, Marion, engr. L. Day, 34 East Grand Ave., St. Louis, Mo., consult. engr.

Mo., Clayton—See "Streets and Roads."

Mo., Higginsville—Soon takes bids two 500 g.p.m. at 40 ft. head, 10 hp. motor driven additional pumps for waterworks.

Mo., St. Louis—Retained H. G. Study of Study & Farrar, archts., Arcade Bldg., to supervise plans for large pumping station, coagulating and filter plants, head house, store rooms, boiler and gate houses, etc., at Howards Bend, on Missouri River. $750,000.

Tex., Amarillo—Election soon $1,750,000 bonds waterworks improvements. H. B. Jones, city engr.

Tex., Comanche—Making plans waterworks improvements, incl. reservoir. $70,000 bonds voted. J. R. Eaves, mayor. Engineer not announced. J. R. Eaves, mayor. Noted Dec. 18.

Gravel—Baton Rouge, La.—Feb. 2, at office State Hy. Comn., Reymond Bldg., 10,334 cu.yd. sand clay gravel and as alternate 3,448 cu.yd. washed gravel and 6,896 cu.yd. 40% sand clay gravel for surfacing State Project R-15, Orny-Frenier Highway, St. John the Baptist Parish. W. B. Robert, state engr.

Crane—Milwaukee, Wis.—B. E. Kaestner, pres., Clayton-Kaestner Sand & Gravel Co., 981 North Pierce St., taking bids 1 clam shell crane for loading gravel.

Paver—Wauwatosa, Wis.—H. Hohensee, Ludington Ave., in market for 2-bag gasoline full or ½ caterpillar paver.

Graders—Fairmont, Minn.—Feb. 4, by W. M. Canfield, aud. Martin Co., 8 patrol graders equipped with 8 ft. blades.

Tractors, etc.—Minneapolis, Minn.—Jan. 27, by F. S. Gram, city purch. agt., one 10 ton caterpillar tractor and five combination grader-scarifiers for 13th Ward, also 3 rotary fire pumps for Fire Dept. N. W. Elsberg, city engr.

Asphalt Surface Heaters—Los Angeles, Calif.—Jan. 28, by City Purchasing Agent, 1 or more asphalt surface heaters.

BIDS RECEIVED

Cement, Trucks, etc.—New York, N. Y.—J. Miller, pres. Manhattan Boro, Municipal Bldg., Jan. 19, 20,000 bbl. Portland cement, from Anderson Brick & Supply Co., 201 East 129th St., $13,750; 6 motor trucks, from International Harvester Co., Grand Central Palace, $27,270; 3 portable air compressors, from C. Hvass & Co., 508 East 9th St., $5,397; 3 tandem steam rollers, from Buffalo Springfield Roller Co., 150 Nassau St., $8,235; 14 steel dumping bodies, from Van Dorn Iron Wks., 318 Bway., $3,860. Noted Jan. 15.

Cluster Lights — Seattle, Wash. — For cluster lights on North and East 45th Sts., incl. 106 poles, 4,500 ft. No. 6, 600W Sgl-W., 24,300 ft. No. 8 600W Sgl-W., 200 ft. Duplex cable No. 6, and 36,600 ft. 1½ in. conduit, from Ne Page, McKenny Co., Armour Bldg., $25,938.

CONTRACTS AWARDED

Cement—Wisconsin—State Hy. Comn., Madison, 186,500 bbls. cement, to Universal Portland Cement Co., 210 South La Salle St., Chicago, Ill.; 53,700 bbls. to Lehigh Portland Cement Co., 111 West Washington St., Chicago, Ill.; 21,400 bbls., to Alpha Portland Cement Co., 140 South Dearborn St., Chicago, Ill.; 32,700 bbls., to Marquette Cement Mfg. Co., Marquette Bldg., Chicago, Ill.; 16,250 bbls., to Sandusky Cement Co., Engineers Bldg., Cleveland, O.; 60,600 bbls., to Western Lime & Cement Co., 130 1st Ave., Milwaukee; 92,800 bbls., to Manitowoc Portland Cement Co., Manitowoc; 956 bbls., to Northwestern States Portland Cement Co., Mason City, Ia.

Structural Shapes — Oakland, Calif. — General Petroleum Corp., 310 Sansome St., San Francisco, 200 tons structural shapes for plant at Parr Terminal, here, to Judson Mfg. Co., Atlas Bldg., San Francisco. Noted Nov. 13 under "Buildings—Industrial."

CONSTRUCTION NEWS

Engineering News-Record, January 29, 1925

The Construction Barometer

Volume Increasing Despite Rising Cost—Building Outlook for 1925 Is One Of Activity in Industrial, Commercial, Institutional and Public Projects

AN INCREASE in the volume of construction in the presence of advancing cost, as shown by the accompanying chart, is taken as evidence of a construction demand that is by no means satisfied. In the Middle Atlantic states, particularly, there has been a steady gain in contract letting for industrial and private commercial buildings during the past three weeks; this trend will probably continue throughout the greater part of the year. The 1925 building outlook, for the various geographical divisions of the country, is as follows: New England, more commercial buildings; Middle Atlantic states, increased activity in residential and industrial work; the South, mainly institutional and residential building; the West, a greater volume of construction in industrial, recreational, educational, institutional and public projects.

Engineering News-Record Statistics

Minimum on water-works and excavations, $15,000; other public work, $25,000; industrial buildings, $40,000; commercial buildings, $150,000.

Value of Large Contracts Let In The United States

OFFICIAL PROPOSALS

Bids: Feb. 9.

Bridge Repairs

STATE OF NEW JERSEY
STATE HIGHWAY COMMISSION

Trenton, N. J.

Notice is hereby given that sealed bids will be received by the State Highway Commission of New Jersey for the following:

Repair and reconstruction of center timber fender, 200 ft. long, 40 ft. wide; and north end of east timber fender, 92 ft. long, 10 ft. wide; including removal of timber and piling, driving of piling and removal of existing masonry pier of the bridge over Hackensack River, M. P. 57.8, State Highway Route No. 1, Lincoln Highway, in the County of Hudson, State of New Jersey.

Bids will be received at the office of the State Highway Commission, 9th floor, Broad Street Bank Building, Trenton, New Jersey, on Monday, February 9th, 1925, at twelve o'clock noon, standard time, and opened and read immediately thereafter.

Drawings, specifications and form of bid, contract and bond for the proposed work are on file in the office of the State Highway Department, Trenton, New Jersey, and may be inspected by prospective bidders. Plans will be furnished on a deposit of Ten Dollars ($10.00) upon application to the State Highway Department, 9th floor, Broad Street Bank Building, Trenton, New Jersey. Bids must be made on the standard proposal forms in the manner designated in the specifications and must be enclosed in sealed special addressed envelopes bearing the name and address of bidder and name and number of the bridge on the outside, and must be accompanied by a certified check drawn to the order of the Treasurer of the State of New Jersey for not less than ten per cent (10%) of the amount of the bid, provided that the said certified check shall not be less than $500.00 nor more than $20,000.00 and be delivered at the above place on or before the hour named. Copies of the standard proposal form and special addressed envelopes will be furnished on application. Bids not enclosed in special addressed envelopes will not be opened.

Each bidder must accompany his bid with a certificate from a surety company duly authorized to do business in this State, stating that such surety company will provide said bidder with a bond in such sum as is required in and in accordance with the provisions of the said specification, conditioned for the faithful performance of the provisions of the contract and specifications. Each bidder must also accompany his bid with a Statement of Equipment properly filled.

By order of the State Highway Commission.

A. LEE GROVER,
Secretary.

Bids: Feb. 10.

Sealed proposals will be received by the Director of Public Service in the Commission Room, 3rd floor, City Hall, Grand Rapids, Michigan, up to 2 o'clock p.m., Central Standard Time of Wednesday the 18th day of February, 1925, for the construction of the Logan Street Relief Sewer Project—Contract J-2, consisting principally of the following:

3,630 feet of 6′ 9″ by 7′ 0″ semi-elliptical section.
2,200 feet of 6′ 6″ by 6′ 6″ semi-elliptical section.
2,850 feet of 60-inch circular or equivalent.
2,800 feet of 54-inch circular or equivalent.
2,550 feet of 48-inch circular or equivalent.
1,800 feet of 42-inch circular or equivalent, and
1,350 feet of 36-inch circular or equivalent sewer together with the necessary junction chambers, overflow connections and manholes.

All the work will, in general, be carried on in open cut although alternate proposals will be received for about 6,700 feet of the work in tunnel. Construction material for the semi-elliptical sections will be reinforced concrete, Blaw-Knox steel arch forms being furnished by the City for their construction.

Acceptable materials of construction for the balance of the work will be reinforced concrete pipe, monolithic type reinforced concrete vitrified clay and concrete (cup-type) segmental block.

Payment will be made in cash, the proceeds of a general city bond issue, authorized November 6, 1923, funds being provided as required by the sale of these bonds.

Each bidder, in his proposal will name a date on which he will agree to bring all the work included under this Contract to full completion.

Copies of the Plans and Specifications according to which the work is to be done are on file in the office of the Sanitary Engineer, 4th floor, City Hall, and can be obtained for bidding purposes by making a deposit of twenty-five dollars, which amount will be refunded upon the return of the Plans and Specifications on or before March 1, 1925.

A certified check in the sum of Fifteen Thousand Dollars ($15,000.00) will be required with each proposal.

The right is reserved by the City to accept any proposal, to reject any or all proposals, and to waive defects in proposals.

FRED H. LOCKE,
City Manager.

Bids: Feb. 6 and 7.

Highway Work

Harrisburg, Pa.

Pennsylvania Department of Highways, Harrisburg, Pennsylvania. Bids will be received February 6 and 7, 1925, for the construction of twenty-two projects, totaling one hundred thirty miles, construction to be either bituminous surface on a concrete base or reinforced concrete. Projects situated in the following counties:

Bedford, Blair, Carbon, Centre, Clarion, Clearfield, Erie, Fayette, Indiana, Luzerne, McKean, Monroe, Northumberland, Schuylkill, Susquehanna, Warren, Washington, Westmoreland.

Full particulars upon application to W. H. Connell, Engineering Executive and Deputy Secretary of Highways, Harrisburg, Pennsylvania.

OFFICIAL PROPOSALS

Bids: Feb. 3.

Conduit

CONTRACT 218

New York, N. Y.

SEALED BIDS will be received by the Board of Water Supply, at its offices, twenty-second floor, Municipal Building, Park Row, Centre and Chamber Streets, New York City, until 11 A.M., Eastern Standard time, on Tuesday, February 3, 1925, for Contract 218, for the construction of Section 2 of the Williamsburg conduit, a portion of the City conduits of the Catskill aqueduct, extending from a point on Leonard Street in the Borough of Brooklyn, about 115 feet south of Metropolitan Avenue, along Leonard, Calyer and Oakland Streets, under Newtown Creek, and along East, Jackson and Ely Avenues in the Borough of Queens to a point on Ely Avenue about 85 feet beyond Nott Avenue.

The conduit will consist of about 14,360 linear feet of 72-inch steel pipes, about 270 tons of cast-iron pipes and special castings of various sizes, a Venturi meter, valves and other appurtenances, all of which will have to be maintained for one year.

At the above place and time the bids will be publicly opened and read. Pamphlets containing information for bidders, forms of bid and contract, specifications, contract drawings, etc., can be obtained at the office of the Secretary at the above address, by depositing the sum of ten dollars ($10) in cash or its equivalent for each pamphlet. For further particulars apply to the office of the Chief Engineer at the above address.

GEORGE J. GILLESPIE,
President.
JAMES P. SINNOTT,
PHILIP F. DONOHUE,
Commissioners, Board of Water Supply.

BENJ. F. EINBIGLER, Secretary.

Bids: Feb. 16.

Contract 26

STATE OF NEW YORK

BY

WESTCHESTER COUNTY PARK COMMISSION

Bronxville, N. Y.

Sealed bids will be received by the Westchester County Park Commission until 11:00 A.M., February 16th, 1925, at its office No. 72 West Pondfield Road, Bronxville, N. Y., for the Grading and Improving of the State Parkway from the South Side of the Annsville Creek, opposite the State Camp Dock, to the Albany Post Road (Highland Avenue), Peekskill, N. Y., the work covering a distance of 4,600 feet and including necessary retaining walls and drainage system.

Pamphlets containing information for Bidders, Form of Proposal, Specifications and Contract Drawings may be obtained by intending bidders at the above address by depositing $5.00. The right is reserved to reject any or all bids.

WESTCHESTER COUNTY PARK COMMISSION,
By JAY DOWNER,
Chief Engineer.

Dated: Bronxville, N. Y., January 12, 1925.

CONSTRUCTION NEWS

Engineering News-Record, February 5, 1925

The Construction Barometer

Materials Prices Either Rising or Firm at Present Levels—Few Declines—Common Labor Cheaper—Lettings for Private Projects Have Been Gaining Over Entire U. S. for Past Three Weeks

PRICES of construction materials in the current market are either rising or remaining fairly firm at present levels. This is due mainly to the approach of the spring building season, not six weeks away. Seasonal unemployment, aggravated by severe weather conditions, has made unskilled, unorganized, common laborers more plentiful throughout the northern sections of the country, with a consequent drop in the average common labor rate. Since the week of Jan. 15, consistent gains in contract letting have been noted, as follows: Private projects for the entire United States; industrial and private, commercial buildings in the Middle Atlantic States; industrial buildings and water-works in the West; and Federal Government construction in the South. Judging from proposals recorded up to the week of Jan. 29, inclusive, this trend will continue to be followed.

Engineering News-Record Statistics

Minimum on water-works and excavations, $15,000; other public work, $25,000; industrial buildings, $40,000; commercial buildings, $150,000.

Value of Large Contracts Let In The United States

Week Ended	Public Work	Private Work	Total Contracts
Jan. 15	$14,189,000	$20,722,000	$34,911,000
Jan. 22	7,940,000	24,281,000	32,221,000
Jan. 29	9,194,000	85,927,000	95,121,000

Waterworks

PROPOSED WORK

Mass., Bridgewater—City plans to purchase Bridgewater Water Co.'s plant and improve same and water system to properly take care of future fires. $290,000.

Mass., Onset—Plans water system improvements incl. new mains, etc. $150,000 bond issue. Engineer not selected.

N. C., Sanford—Plans enlarging water supply by substituting 24 in. c.i. mains for existing 8 in. mains, etc. To exceed $25,000.

Fla., South Jacksonville (Ind. Br. Jacksonville)—See "Streets and Roads."

Tenn., McKenzie—Plans waterworks improvements, incl. pumps, restoring 2 wells, etc. C. R. Woods, supt. Water & Light Co.

Tenn., Trezevant — Making tentative plans for new waterworks system. $35,000 bond issue contemplated.

Ill., Carthage — Takes bids in March, waterworks, pumping equipment, tank on tower, distribution mains, etc. $150,000. Caldwell Eng. Co., 502 Ayers Bank Bldg., Jacksonville, engrs.

Minn., Fergus Falls—City plans election to vote $20,000 bonds for water main extensions. H. J. Collins, city clk.

S. D., Aberdeen—L. Kohloff, city aud. plans waterworks, $150,000 bonds will be voted.

Mo., Buffalo — Defeated $45,000 bonds waterworks. Noted Jan. 8.

Mo., St. Louis—See "Streets and Roads."

Tex., Brady — Voted $100,000 bonds waterworks extensions, incl. mains and pumps. E. L. Jones, mayor. Engineer not selected. Noted Jan. 29.

Tex., Elgin—Making plans pumping system and extensions. $50,000. Terrell-Bartlett, Calcasieu Bldg., San Antonio, engrs.

Tex., Galveston—Takes bids after Feb. 1, 8 m.g. steel or rein.-con. tank, or four 2 m.g. steel or rein.-con. tanks. $100,000. W. A. Masterson, supt. Waterworks. Noted Jan. 1.

Tex., Hillsboro—Election Feb. 24, $25,000 bonds water and sewer extensions. Address A. M. James, city secy.

Tex., Killeen—Election Feb. 18 to vote $16,000 bonds waterworks improvements. H. N. Law, mayor.

Waterworks (Continued)

Tex., Lamesa — Voted $40,000 bonds, mains and provide pumping equipment. J. Walker, mayor. Engineer not selected. Noted Jan. 8.

Tex., San Saba—See "Sewers."

Okla., Bartlesville—City Commissioners plan to purchase privately owned waterworks and distribution system and if sale is consummated present plant will be rehabilitated, incl. larger distribution mains, 6 m.g. storage reservoir, and new water supply secured from either Butler Creek or Caney River. $750,000. Burns & McDonnell, Interstate Bldg., Kansas City, Mo., consult. engrs. Noted Apr. 3.

Okla., Morrison—Voted $27,000 bonds for new waterworks, incl. 20,900 ft. 2- to 6-in. c.i. pipe, well, pump, tank, valves, hydrants, etc. H. Olmsted, 2230 West 18th St., Oklahoma City, engr. Noted Jan. 22.

Okla., Wewoka—Voted $150,000 bonds for large dam and pipe line. V. V. Long & Co., 1300 Colcord Bldg., Oklahoma City, engrs. Noted Jan. 22.

Wash., Shelton—City Council considering plans prepared by Burns-McDonnell-Smith Eng. Co., 45 Marsh-Strong Bldg., Los Angeles, Calif., for waterworks improvements incl. 2,000 ft. wood, 8,500 ft. 8 in. steel pipe line, also 25,000 gal. tank with 1 m.g. reservoir. $64,000.

Wash., Wenas—See "Excavation, Drainage, Irrigation, Levees."

Calif., Huntington Park—Voted $31,000 bonds to purchase present water system (privately owned) and $24,000 bonds to finance 200,000 gal. elevated, steel tank and tower and 100,000 gal. rein.-con. reservoir, centrifugal pump, electric motor and fire hydrants. Noted Dec. 4.

Calif., North Sacramento (Sacramento P. O.)—See "Excavation, Drainage, Irrigation, Levees."

Calif., North Sacramento (Sacramento P. O.)—North Sacramento Light & Water Co., 825 Jay St., Sacramento, making plans furnishing domestic supply, 5,280 ft. 30 in. riveted steel pipe, five 8 in. centrifugal pumps, capacity 4 sec.ft., 80 ft. total, direct connected to 300 hp. electric motors, $25,000 or more. Private plans.

Calif., Wheatland—City plans to purchase emergency pumping plant for waterworks.

BIDS DESIRED

N. Y., Mt. Vernon—Feb. 20, by Bd. Water Supply, 19 Prospect Ave., extending waterworks. N. S. Hill, Jr., 112 East 19th St., New York City, consult. engr.; adv. E. N.-R. Feb. 5.

N. Y., New York—Mar. 16, by J. E. Bowe, comr. Purchase, Municipal Bldg., furnishing, delivering, unloading, stacking and storing c.i. pipe, special and valve box castings, hydrants, etc., to Dept. Water Supply, Gas & Electricity.

N. Y., North Tarrytown—Feb. 20, by Bd. Village Trustees, at office T. A. Quinn, clk., Beekman Ave., constructing water supply system. Wulff Eng. Co., Natl. Bank Bldg., Tarrytown, engrs.; adv. E. N.-R. Feb. 5.

N. Y., Oneida—Feb. 20, by Bd. Water Comrs., furnishing (1) $12,300 tons c.i. pipe and 60 tons c.i. specials, or (2) 6,200 tons c.i. pipe and 40 tons specials; adv. E. N.-R. Feb. 5.

N. J., Sea Girt—Feb. 24, by Boro Council, 150,000 gal. elevated steel water tank. C. A. Bond, Jr., boro clk., adv. E. N.-R. Feb. 5.

Md., Baltimore—Feb. 11, by Bd. Wards, c.i. pipes and fittings, 150,000 lb. lead substitute and 250,000 lb. pig lead. V. B. Siems, City Hall, engr.

N. C., West Jefferson—Feb. 18, by Town Bd. Comrs., 2,700 ft. 2 in., 13,800 ft. 6 in. and 1,400 ft. 8 in. c.i. pipe, five 2 in., twenty-five 6 in. and seven 8 in. gate valves, 36 hydrants, 1,300 c.i. specials, two 150,000 gal. concrete or steel reservoirs. Carolina Eng. Co., 917-919 Johnston Bldg., Charlotte, engrs.

Ky., Paintsville—Feb. 21, by City Clerk, pumping station, filter plant, motor driven centrifugal pumps, storage reservoir, mains, etc. J. N. Chester Co., Union Bank Bldg., Pittsburgh, Pa., engrs.; adv. E. N.-R. Feb. 5.

Mich., Bay City—Feb. 16, by W. H. Reid, city mgr., completing substructures for filtration plant, etc. Frazier, Ellms, Sheal Co., B. F. Keith Bldg., Cleveland, O., engrs.

Minn., Mankato—Feb. 9, furnishing about 211 tons c.i. pipe and special castings, incl. 110 pieces 8-in. B and S, Class C, c.i. pipe, 760 pieces 6-in., 70 pieces of 6-in. plain end, all 12-in. lengths and 8½ tons special castings. P. F. Comstock, city engr.

Minn., St. Paul—Feb. 10, by H. W. Austin, city purch. agt., 481 pieces c.i. water pipe, also gate valves and service connections boxes. C. M. Shepard, city engr.

Calif., Pismo Beach—Pismo Beach Water Co., taking bids complete water system, 2 wells, pumphouse, 1 motor driven high duty triplex pumping unit, 5,660 ft. 6 in. and 2,280 ft. c.i., w.i. or steel pipe, and one 16,000 gal. steel tank. Black & Veatch, Ferguson Bldg., Los Angeles, engrs.

Ont., Hamilton—A. McFaul, city engr., taking bids equipment for chlorination plant for waterworks.

Ont., St. Catharines—Feb. 17, by G. F. Peterson, chn. Waterworks Comn., 5 m.g. clear water reservoir, and mechanicel gravity filtration plant. $500,000. A. Milne, c/o Water Dept., engr.

BIDS RECEIVED

N. Y., Brooklyn — Bd. Water Supply, Municipal Bldg., New York City, Jan. 27, constructing Sect. 1 Williamsburg Conduit portion of city conduits of Catskill Aqueduct, here, Contr. 219, from Beaver Eng. Co., 57 Chambers St., New York City, $1,010,000. Noted Jan. 15.

Ill., Pinckneyville—Feb. 16, by P. J. C. Ham, city clk., 1,400 g.p.m. centrifugal pump, 500 g.p.m. pump and motor, two 600 g.p.m. pumps and motors and one 500 g.p.m. fire pump and gasoline engine. A. H. Beard, 616 Title Guaranty Bldg., St. Louis, Mo., engr. Noted Oct. 16.

Mich., Detroit—Feb. 16, by Comrs. Purchase & Supplies, Marquette Bldg., 30 disc water meters, 300 six in. standard fire hydrants, 15 four nozzle high pressure fire hydrants.

Kan., Kansas City—Feb. 10, by G. T. Darby, purch. agt., two 4 m.g. capacity motor driven centrifugal pumps for booster service. Noted Sept. 4.

Ark., Altheimer—Feb. 10, by Bd. Impvts. Waterworks Dist. 2, at office of J. Cohn, secy., 8,260 ft. 4 and 6 in. c.i. pipe, 16 standard 2 way fire hydrants, six 6 in. and seven 4 in. gate valves. G. B. Smith, 410 Citizens Bank Bldg., Pine Bluff, engr.

CONTRACTS AWARDED

Mass., Boston—Supply Dept., to Kennedy Valve Mfg. Co., Elmira, N. Y., twenty-four 8 in. gate valves $131.28 each, and twelve 12 in. gate valves $221.13 each. Noted Jan. 22.

N. Y., New York — N. J. Hayes, comr. Water Supply, Gas & Electricity, Municipal Bldg., mains in Duncan and East 213 Sts., Allerton, Arrow, Byron, Colden, Fish, Hill, Hering, Laconia, Lurting, Mace, Mickle, Needham, Nereid, Seymour, Throop, Tenbroeck, Waking and Yates Aves., to C. DeBlasio, 339 7th Ave., Mt. Vernon, $14,889. Noted Jan. 29.

D. C., Wash.—Pipe Line—Dist. Comrs. constructing first high pipe line, here to Lock Joint Pipe Co., Ampere, N. J., $283,950. Noted Jan. 22.

N. C., Sanford—For 2 mi. 12 in. main, to Burlington Con. Co., Burlington, $28,000.

La., New Orleans—Waterworks on Hope Haven Farm, 6,000 ft. 6 in. c.i. pipe, medium weight, Class C valves and fittings, one 500 and one 200 gal. electric driven pump, sand and gravel filter, with 8 x 25 x 10 lb. pressure and 50,000 gal. tank with 110 ft. tower, to Stevens Constr. Co., Louisiana Bldg.

Wis., Milwaukee—Central Bd. Purchases, to W. P. Taylor Co., 218 Ellicott Sq., Buffalo, N. Y., 50 D boxes at $4.90 each, 450 D. D. boxes $5.20, 100 covers $0.75, 300 top sections $1.75, 50 D. D. middle sections $1.40 and 500 extension pieces $0.82; to U. S. Cast Iron and Fdry. Co., 122 South Michigan Blvd., Chicago, Ill., 125 tons special castings, consisting of 3 and 4 ways, curves, etc., at $90 per ton, 3,060.4 tons 54 in. straight c.i. pipe at $46.50 per ton, 21.75 tons 54 in. lugged pipe $66.50, 32.9 tons special castings $160. Noted Jan. 29.

N. D., Jamestown—State Bd. of Administration, Bismarck, waterworks improvements at State Hospital for Insane, here, including concrete reservoir well, 16 ft., in diam. and 37 ft. deep, 1 concrete pump pit, installing 2 motor driven pumps, constructing brick and tile pump house, electric transmission line, 2,400 ft., long, laying 1,050 lin. ft. 8 in. c.i. pipe etc. to Northern Constr. Co., Grand Forks, $19,419. E. G. Wanner, ex. sec.

Mo., St. Louis — Bill Hayes, Inc., 907 Majestic Bldg., Detroit, Mich., sublet contract 87,000 ft. 60 in. pipe, for pressure conduit from Howards Bend to Missouri River in St. Louis Co here, to J. McNeil & Bro. Co., 29th St., Pittsburgh, Pa.; also 13,000 tons steel plate for ppie, to be supplied by Carnegie Steel Co., Carnegie Bldg., for Bd. Pub. Serv., 208 City Hall. Noted Jan. 29.

Sewers

PROPOSED WORK

Conn., Wallingford — Making plans sewage disposal plant. To exceed $25,000. W. A. MacKensie, City Hall, engr.

Fla., South Jacksonville (Ind. Br. Jacksonville)—See "Streets and Roads."

Ill., Belleville—Making tentative plans straightening Richland Creek from northern to southern limits and connecting storm sewers with same, also disposal plant, etc. $600,000. Engineer not selected.

Mo., St. Louis—Soon takes bids rein.-con. sewer, 32 ft. wide and 25 ft. high in Sect. E of River Des Peres Project through Forest Park, $1,540,000; repairing existing sewers incl. extension of outlets into Mississippi River as follows, Lesperance Sewer $45,000, Biddle-O'Fallon Sewer $74,500, Trudeau St. Sewer $56,000, and Fillmore St. Sewer $54,000. Noted Jan. 15.

Tex., Hillsboro—See "Waterworks."

Tex., Killeen—Election Feb. 18, to vote $36,000 bonds for sanitary sewer system. H. N. Law, mayor.

Tex., Lamesa—Voted $50,000 bonds extending sewer mains and provide disposal plant. J. Walker, mayor. Engineer not selected. Noted Jan. 8 under "Waterworks."

Tex., San Saba—Defeated $60,000 bonds for sewers. New election soon for sewers and waterworks systems. Address mayor. Noted Dec. 25.

Okla., Wewoka—Voted $50,000 bonds for 6 mi. extension to sanitary sewerage system. V. V. Long & Co., 1300 Colcord Bldg., Oklahoma City, engrs. Noted Jan. 8.

Calif., Glendale—City Clerk takes bids about Feb. 19, 75,772 ft. 8- to 18-in. concrete sewers in various streets. Burns, McDonnell-Smith, 415 Marsh-Strong Bldg., Los Angeles, engrs.

Calif., Hermosa Beach — Voted $200,000 bonds for sewer lateral and $350,000 bonds for main sewer. Noted Jan. 1.

Calif., Los Angeles — Los Angeles Co. making plans drainage conduit and pipe line between Norwich Dr. and La Cienega Blvd., 29,300 ft. 6- to 10-in. concrete and 20,480 ft. 24- to 72-in. rein.-con. pipe, 218,000 cu.yd. excav., 4,750,000 lbs. reinforcing, 6,000 cu.yd. sand and gravel, 117 manholes, 40,000 ft. piling, etc. $1,800,000. A. K. Warren, Hall of Records Bldg., engr.

Calif., Venice—Voted $325,000 bonds, 24 in. sewers between here and Del Ray, connecting with Los Angeles outfall. H. D. Chapman, city engr. Noted Oct. 9.

Calif., Santa Barbara—Making revised plans sewers in Garden St., etc. Former bids rejected. Noted Jan. 29.

BIDS DESIRED

N. Y., Long Island City—Feb. 13, by M. E. Connolly, pres. Queens Boro., Queens Subway Bldg., sanitary sewers in 150th, Sutter, North Conduit and Pitkin Aves., Judith, 75th (Ruby) and 76th (Emerald) Sts.

Md., Baltimore—Feb. 11, by Bd. Awards, 7,500 ft. 8- to 48-in. sewers in Storm Water Contr. 80. B. L. Crozier, City Hall, engr.

Ala., Mobile—See "Streets and Roads."

O., Portsmouth—Feb. 19 by C. W. Wilson, dir. Pub. Serv., for separate sanitary and storm sewers. C. S. Stevenson, city engr., adv. E. N.-R. Feb. 5.

Ill., Elgin — March 2, by Bd. Trustees Sanitary Dist. of Elgin, 12 Spurling Blk., equipment for sewage pumping stations. Pearse, Greeley & Hansen, 6 North Michigan Ave., Chicago, consult. engrs.; adv. E. N.-R. Feb. 5.

Wis., Milwaukee—Feb. 9, by D. W. Hoan, chn., Central Bd. Purchases, five hundred twenty-five 3 and 4 flange frame and gates with side inlet boxes and 100 standard manhole covers.

Minn., Winona—Feb. 9, constructing 2.3 mi. sewer main and about 725 lin.ft. of 12 in. c.i. discharge mains, in 5th Sewer Dist. $25,000. E. E. Chadwick, city engr.

CONTRACTS AWARDED

Conn., Wallingford—For 10,000 ft. concrete sewers in North Main St., to O'Neil Bros., 983 Main St., Hartford.

N. Y., Brooklyn—J. A. Guider, boro pres., Boro Hall, (**e. e. means engineers estimate**) sewers in West 5th St., to C. F. Vacharas, 645 40th St., 71% e. e. $350,000; in Lefferts Ave. and 96th St., to Nazzarro & Guerriero, Inc., West 9th St., 69% e. e. $4,233 and 70% e. e. $1,348 respectively; Liberty Ave., to Tomasetti & Co., Inc., 1133 60th

Sewers (Continued)

St., 78% e. e. $9,557; Bergen Pl., to A. Talenti, 67% e. e. $2,058. Noted Jan. 22.

N. Y., Long Island City—M. E. Connolly, pres. Queens Boro., Queens Subway Bldg., sewers in Queens Blvd., to J. Gallo, 203 Division St., Brooklyn, $138,103; Laburnum Ave., to Kennedy & Smith, 93 Amity St., Flushing, $168,793. Noted Jan. 22.

Fla., Sarasota—For 3 complete sanitary sewerage systems, 49,300 ft. pipe in trenches 0 to 8 ft. depth, to J. L. Walker Co., 231 Court St., Hamilton, O., $65,000; remodeling 3 septic tanks, pump screens, 1 pumping station, 7,600 ft. 10 and 12 in. force mains, etc., to Erler Corp., Tampa, $26,000. Noted Oct. 2.

O., Canton—City, sewage disposal plant addition, incl. 3 sets of sedimentation tanks, sprinkling filters complete, 41,500 cu.ft. earth excav., etc., to Holmes Constr. Co., Wooster, $829,000. Engrs. est. $800,000. Noted Nov. 20.

Kan., Ft. Dodge—State Soldiers Home, 15,300 ft. 6- to 10-ft. vitr. clay pipe, 9 manholes, 2 flush tanks, etc., 2,800 ft. 2 and 6 in. c.i. pipe, 16 gate valves, etc., to Carrothers Constr. Co., 310 Walsix Bldg., Kansas City, Mo., $37,650.

Tex., Cameron — Sewage disposal plant with septic tanks, dosing chamber, filter beds, sludge beds, excavating, etc., to Thomas & Ratliff, Rogers, $22,864. Noted Dec. 18.

Tex., Mission—Sewerage system, mains, laterals, etc., in various streets, to N. A. Saigh Co., 202 Gibbs Bldg., San Antonio, $34,868; disposal plant, to H. J. Wilson, Pharr, $21,700. Noted Jan. 15.

Calif., Los Angeles — South Bay Cities Sanitation Dist., Los Angeles Co., 700 Hall of Records Bldg., 2 pumping stations, 4 pumps, and 28,644 ft. 24- to 30-in. rein.-con. sewer, etc. from point 10 ft. south of boundary line between Hermosa and Redonda, to J. C. Duncan, 5128 Fairmont Ave., Eagle Rock, $344,970. Engrs. est. $350,000. Noted Jan. 1.

Waste Disposal

PROPOSED WORK

Mass., Lynn—H. S. Johnson, city purch. agt., City Council Chambers, taking bids complete rein.-con. and brick incinerator plant, 80 ton daily capacity, near municipal stables on Gas Wharf. $200,000. Private plans.

Pa., Sharon—Feb. 17, garbage incinerator. L. E. Burnside, City Bldg., city engr.; adv. E. N.-R. Feb. 5.

Bridges

PROPOSED WORK

Mass., Boston — Dept. Pub. Wks., City Hall, plans reconstructing Massachusetts Ave. Bridge over tracks of Providence Div. of New York, New Haven & Hartford R.R. To exceed $25,000. J. A. Rourke, comr.

S. C., Charleston—State Hy. Dept. takes bids soon viaduct over Atlantic Coast Line and Southern Railway System tracks at Five Mile on King St. Extension project. $100,000. J. Parker, 602 Peoples Bldg., state highway bridge engr.

OFFICIAL PROPOSALS

Bids: Feb. 19

Sewers

Dover, N. J.

The Sewer Committee of the Mayor and Board of Aldermen of the Town of Dover, N. J., will receive, at a meeting to be held in the Council Chambers in the Municipal Building, North Sussex Street, Dover, N. J., on Thursday, February 19th, 1925, at two o'clock p.m., sealed proposals for furnishing materials and doing all the necessary work required for the construction of all house connections to the sewer system in Blackwell Street, Dover, between the railroad viaduct in West Blackwell Street and the White bridge over the Rockaway River in East Blackwell Street, as the Mayor and Board of Aldermen of the Town of Dover may determine to construct.

The work includes excavating and pipe laying where required, and all other work incidental thereto, and must be done and performed at the places designated by the Mayor and Board of Aldermen and according to specifications prepared by Clyde Potts, Engineer, which specifications may be seen at the office of the Clerk of the Town of Dover, Municipal Building, or at the office of Clyde Potts, 30 Church Street, New York City.

Each bid must be accompanied by a certified check for Eight Thousand Dollars ($8,000.00), payable to the order of John Moller, Treasurer, Town of Dover. Each bid must also be accompanied by a certificate from a reliable bond company, stating that it will furnish the bidder with a bond in the amount and for the purpose required in the specifications.

The Mayor and Board of Aldermen of the Town of Dover reserve the right to reject any and all proposals and to waive any informality in the proposals received and to accept any proposal which they deem to be most favorable to the interests of the Town.

The successful bidder will be required to enter into a bond to and in the form approved by the Mayor and Board of Aldermen of the Town of Dover for the faithful performance of the contract.

By order of the Mayor and Board of Aldermen of the Town of Dover.

JOSEPH V. BAKER,
Town Clerk

Dated January 29, 1925.

Bids: Feb. 12.

Lighting System Extensions

Wilson, N. C.

Sealed bids will be received by the Mayor and Board of Commissioners of the Town of Wilson, North Carolina, for the above work, until 4 o'clock p.m. of February 12th, 1925, when they will be opened and publicly read at the Mayor's office.

The extensions will consist of materials covered by items specifically set out in specifications on file at the office of the Supt. of the electric light department of the Town of Wilson, and work enumerated therein, which plans and specifications and contract forms may be obtained by applying to the undersigned.

Proposals must be sealed and properly addressed to either of the undersigned, Wilson, North Carolina.

Each bid must be accompanied by a certified check or bidders bond in the amount of 5% of the amount bid as evidence of good faith on the part of the bidder.

The right is reserved to reject any or all bids or to accept any which may seem to be to the best interest of the Town of Wilson.

SILAS R. LUCAS,
Mayor.
R. J. GRANTHAM,
Supt.

Bids: March 2.

Dredging

Ithaca, N. Y.

CONSTRUCTION NEWS

Engineering News-Record, February 12, 1925

The Construction Barometer

Volume of Construction Increasing With Declining Cost—Steady Gain Now Seen in Lettings for Public Work Throughout U. S.—Water-Works and Private Buildings Lead in West—Federal Government Work Active in South

AN INCREASING volume, consequent to declining cost, is true of the present construction situation, as shown by the accompanying charts. Nearly all classes of work shared in the January gains and there is a consistent upward trend in contract letting for public work throughout the entire nation. The past month has seen steady gains, from week to week, in Federal Government awards in the South. In the Middle West, the only classification to show a definite increase each week, over the one preceding, is that of private buildings for commercial use. The same may be said of water-works projects in the states immediately west of the Mississippi.

Engineering News-Record Statistics

Minimum on water-works and excavations, $15,000; other public work, $25,000; industrial buildings, $40,000; commercial buildings, $150,000.

Value of Large Contracts Let In The United States

Route 13, Sects. 21 and 22, Randolph and St. Clair Counties, to Hoeffken Bros., Belleville, $163,277; 4.35 mi. Route 3, Sects. 51 and 52, Greene Co., to Nelson Bros., Jerseyville, $99,560. Noted Nov. 27.

Ill., St. Charles — To H. Jensen, St. Charles, improving 3rd St and Anderson Blvd, (city's share of work includes) 9,229 cu.yd. grading, 15,489 sq.yd. 8 in. concrete surfacing, 11,492 ft. curb and gutter, 5,995 ft. expansion joints, 3,008 ft. 8- to 15-in. vitr. clay pipe, 60,647, (railroad's share), 2,927 sq.yd. 8 in. and 4,285 sq.yd. 11 in. surfacing, 2,191 ft. expansion joints, 192 ft. 8 in. vitr. clay pipe, etc., $22,680. Noted Jan. 29.

Ill., West Chicago—To Gund-Graham Co., Freeport, grading and concrete surfacing 22,345 sq.yd. Southwest Dist., incl. Milo Court, Norris, Sherman, Clara, Harrison, Church and Ann Sts., $79,047, and 9,209 sq.yd. Sophia St., York and Fairview Aves., $31,545. Noted Jan. 22.

Ia., Sioux City—Illinois Central R.R. Co., 135 East 11th St., Chicago, Ill., grading grounds for roundhouse, shops and terminal, about 120,000 cu.yd. excav., to R. E. Betz, Iowa Bldg., $50,000.

Tex., Boston—Bowie Co., paving 11.64 mi. State Highway 5, 18 ft., to McGuire & Cavender, Sherman. Noted Dec. 4.

Tex., Houston—Harris Co., grading and bituminous concrete surfacing Rice Blvd. from Sunset Blvd. to Reenerman St., to S. Shambaugh, 1401 Dowling St., $63,601. Engrs. est. $65,000.

Tex., Houston—Paving North and South Boulevard Aves. from Dunlavy to Hazard Sts., to Gulf Bitulithic Co., 801 Bankers Mortgage Bldg., $49,032, engrs. est. $50,000; graveling Buffalo Dr. from City Park to Shepards Dam, to C. K. Horton, 2202 Clay St., $44,632, engrs. est. $45,000.

Tex., Kaufman — Kaufman Co. **(e.e. means engrs. est.)** to Smith Bros., Inc., Amer. Exch. Bank Bldg., Dallas, rein.-con. paving 41.431 sq.yd. State Highway 15, Federal Aid Project 130-C, $92,698, e.e. $103,-500; 69,951 sq.yd. State Highway 15, Federal Aid Project 130-A, $131,616, e.e. $175,-000; 113,393 sq.yd. State Highway 15, Federal Aid Project 130-D, $231,617, e.e. $260,-000. Noted Jan. 29.

Tex., Snyder — For 29,000 sq.yd. 3 in. vertical fibre brick with texaco asphalt filler pavement, to Smith Bros., Inc., Sumpter Bldg., Dallas. Noted Jan. 29.

Okla., Tulsa—To H. L. Cannady Co., 1122 South Lewis St., improving Archer St., Dist. 609, 1,843 sq.yd. G paving, 1,139 ft. curbing and 1,123 cu.yd. excav., $8,133, 18th, 21st and Main Sts., Dist. 610, 6,643 sq.yd. G paving, 4,142 ft. curbing and 3,273 cu.yd. excav., $28,572, alley in Block 3, Crosbie Heights addition, Dist. 611, 633 sq. yd. 6 in. Class F paving, 125 cu.yd. excav., $2,060, Latimer Court, Dist. 612, 1,754 sq. yd. paving, 1,214 ft. curbing and 924 cu. yd. excav., $7,893; to Standard Paving Co., 1742 East 6th St., improving Atlanta St., Dist. 613, 4,673 sq.yd. Class B paving, 3,080 ft. curbing and 2,334 cu.yd. excav., $21,343.

Okla., Wetumka—Grading and surfacing 3 blocks Bway., Frisco and Canadian Sts., 3,500 sq.yd. vertical fibre brick, 980 lin.ft. curbing, 1,400 cu.yd. earth and 60 cu.yd. rock excav., to Park & Moran, Box 622 Okmulgee, $26,359. Engrs. est. $27,300. Noted Jan. 15.

Calif., Fresno—Fresno Co., to California Road & Street Impvt. Co., Bank of Italy Bldg., improving roads in Impvt. Dist. 6, 107,400 sq.ft. 1.5 in. Warrenite on 2.5 in. asphaltic concrete at $0.157 per sq.ft., 167,200 sq.ft. grading $0.36, total $35,020; to Thompson Bros., G and Divisadero Sts., roads in Impvt. Dist. 7, 812,650 sq.ft. 1.5 in. Warrenite on 2.5 in. asphaltic concrete at $0.176, 1,243,800 sq.ft. grading $0.015, total $171,937. Noted Feb. 5.

Calif., San Francisco—Grading, concrete curbing, asphalt paving, etc., residential tract bounded by Monterey St., El Verango Way and Yerba Buena Ave., to Pacific States Constr. Co., Call Bldg., approximately $45,000. Owner's name withheld.

Calif., Santa Monica—Bitulithic on asphaltic concrete paving 175,500 sq.ft. Arizona Ave. between 20th St. and east city limits, to S. Pearson, 3847 Bway., Los Angeles, approximately $78,800. Noted Jan. 29.

Calif., Santa Rosa—Grading, reconstructing existing macadam into 4 in. base and surfacing with 3 in. willite portions of Lincoln, 7th and B Sts., to Clark & Henery Constr. Co., Chancery Bldg., San Francisco, to exceed $25,000. Noted Aug. 7.

Calif., Venice—Grading, curbing and 6 in. concrete paving Walgrove Ave., to J. and R. Youngblood, Venice, approximately $25,650.

Ontario—Northern Development Branch Provincial Hy. Dept., Parliament Bldg., Toronto, will clear and improve 40 mi. road from Fort William, Ont., Winnipeg, Man., 66 ft., gravel and macadam, by day labor. $400,000. C. H. Fullerton, Parliament Bldg., Toronto, ch. engr.

Buildings—Industrial

PROPOSED WORK

Me., Camden — Mill — Seabright Woven Felt Co., having plans prepared by J. C. and J. H. Stevens, 187 Middle St., Portland, 4 story, 55 x 115 ft., brick and timber addition, plain foundation. $300,000. Noted Jan. 22.

Mass., Lawrence—Bakery—White House Baking Co., having preliminary plans prepared by J. G. Morrisette, 575 Essex St., 2 story, rein.-con. and steel, Essex St. $40,000.

Mass., New Bedford — Factory — Continental Wood Screw Co., Pleasant St., having plans prepared by Leary & Walker,

Buildings—Industrial (Continued)

Timber Bldg., 2 story, 80 x 100 ft., brick addition. $75,000.

Mass., Somerville (Boston P. O.—Factory—E. F. Kemp, Skelton Ave., having plans prepared by W. Sidebottom, 101 Tremont St., Boston, 2 and 3 story, 35 x 65 ft., brick addition. $45,000.

R. I., Providence — Warehouse — City plans warehouse in 2 sections each 144 x 200 ft., at City Dock, Fields Point. $300,000. F. E. Waterman, ctiy engr.

Conn., New Haven — Storage — Durham Storage Co., 35 Olive St., having plans prepared by Westcott & Mapes, Inc., archts. and engrs., 207 Orang St., 3 story and basement, 35 x 50 ft., rein.-con., brick and steel, Olive St. $75,000.

N. Y., Brooklyn—Housing Station—Dept. Plants & Structures, Municipal Bldg., New York City, having plans prepared rein.-con. and brick housing station, East 35th St. and Ave. I, here. $100,000. Private plans.

N. Y., Brooklyn — Laundry — Colonial Laundry Co., 16 Lexington Ave., soon takes bids brick, steel and stone laundry, plain foundation, Lexington Ave. $200,000. McCarthy & Kelly, 159 Remsen St., archts. and engrs.

N. Y., Brooklyn—Refinery—Amer. Sugar Refining Co., 117 Wall St., New York City, plans extensions to sugar refinery, South 2nd St., here. Private plans.

N. J., New Brunswick—Factory—Oxford Dye Wks., Inc., New Brunswick, plans 1 story factory. $200,000. Engineer and architect not selected.

N. J., Trenton—Plant—Certain-Teed Products Corp., East State St., plans plant addition to replace one recently destroyed by fire. $40,000. Engineer and architect not selected.

N. J., Trenton—Plant—Federated Metals Corp., Enterprise Ave., C. W. Munro, pres., 472 Greenwood Ave., plans 2 story, 100 x 200 ft. plant. $50,000.

Pa., Phila.—Plant—A. W. Barnes, archt., Perry Bldg., soon lets contract 5 story and basement, 28 x 178 ft., rein.-con. and brick, plain foundation, 1529 Parrish St., for F. A. North Co., 1306 Chestnut St. $175,000.

Md., Cumberland—Plant—Sinclair Refining Co., 45 Nassau St., New York City, plans cold storage plant here. $100,000. Private plans.

N. C., Asheville—Plant—Sayles Finishing Plants, Inc., Saylesville, R. I., soon lets contract large plant on Swannanoa River, near here. Total incl. site, equipment and construction $1,000,000. J. E. Sirrine, Greenville, S. C., engr. Noted Jan. 22.

Tenn., Knoxville — Mill — Ashe Hosiery Mills plans mill addition, Gay St. $50,000.

O., Cleveland — Factory — Ferbert-Schonderfer Co., A. J. Ferbert, pres., Elmwood Rd., plans 3 story and basemen,t 60 x 60 ft., brick and steel, Elmwood Rd. $40,000. Private plans.

Mich., Detroit—Shop—Dodge Bros., Inc., 7900 Jos. Campau Ave., having plans prepared by Smith, Hinchman & Grylls, 800 Marquette Bldg., 1 and 2 story and basement, brick and steel, plain foundation.

Wis., Madison — Laundry — Alford Bros. Co., 113 North Carroll St., having plans prepared by Claude & Starck, Badger Annex, 1 story, 40 x 100 ft., brick, rein.-con. and steel laundry, plain foundation.

Wis., Sevastopol (Sturgeon Bay P. O.)—Factory—Reynolds Preserving Co., W. S. Reynolds, mgr. North West Sturgeon Bay, having plans prepared 1 story, 40 x 90 ft., rein.-con. and brick, plain foundation. $40,000. Private plans.

Wis., Waterloo — Dry Kiln, etc. — The Wisconsin Pop Corn Co., A. Schultz, secy., plans 2 story, 130 x 140 ft., brick and concrete dry kiln, warehouse and storage tanks building, plain foundation. $40,000. Engineer and architect not selected.

Tex., Dallas—Mill—Miller Mfg. Co., 906 Jackson St., C. R. Miller, pres., making plans 3 story, brick and timber addition, plain foundation. $1,000,000. Private plans.

Tex., Denton—Cold Storage—W. T. Bolton having plans prepared 1 story, 30 x 150 ft. cold storage building, concrete and brick. $45,000. Private plans.

Tex., San Antonio—Power Plant—San Antonio Pub. Serv. Co., 201 North St. Mary's St., making plans and surveys addition to power plant, incl. equipment. $210,000. E. H. Kifer, vice-pres. and genl. mgr.

Electric Light and Waterworks Improvements

Mansura, La.

Sealed bids will be received by the Mayor and Board of Aldermen of the Town of Mansura, La., at their regular meeting place until the hour of 10 a.m., of the day of Feb. 25th, 1925, for the following:

One 50 H.P., one 100 H.P., Crude Oil Engines. Directly connected Alternators and Power Pump 500 gals. per minute.

Two exciters, motor driven air compressor, motor driven centrifugal pump, 8" Tubular well, 68,000 gal. Concrete Reservoir, 50,000 Gal. Elevated Tower and Tank, Cast Iron Pipe Mains and Specials, Valves, Hydrants and Usual galvanized house connections, etc.

Complete Pole line materials, Transformers and Motors, etc.

Proposals must be marked in Red Letters. "PROPOSALS FOR LIGHT AND WATERWORKS IMPROVEMENTS."

All bids must be upon blank forms provided in the specifications.

Each bid must be accompanied by a Certified Cashier's Check (Bidders Bond not acceptable) in amount of 7% of the amount of bid. No amount less than $150.00 will be received. This amount is to be deposited as evidence of good faith.

Plans and specifications will be on file at the office of the Town Clerk, Dr. H. J. Siess, at Mansura, La., and at the office of the Engineer, F. P. Joseph, Glenmora, La.

Copies of the Plans and specifications, forms of proposals, etc., etc., may be obtained from the Engineer for the sum of $7.50 which amount is not refundable, and shall apply to cover the cost of same.

The right is reserved to reject any and all bids, waive any and all formalities or to accept any bids which in the opinion of the Board of Aldermen will best serve the interests of the Municipality.

ARTHUR J. ESCUDE, Mayor.
DR. H. J. SIESS, Clerk.
F. P. JOSEPH, M.E.,
Consulting Engineer,
Glenmore, La.

Bids: March 3.

Street Paving

Bluefield, W. Va.

Sealed proposals will be received at the office of the City Manager, Coal & Coke Building, Bluefield, West Virginia, until two o'clock P. M. March 3, 1925, for the following paving, all within the City of Bluefield:

PROJECT 1

Removal of old macadam; grading; storm sewer and catch basin work; curbing; concrete foundation, and surfacing approximately 24,000 square yards.

PROJECT 2

Grading; storm sewer and catch basin work; curbing, and paving, preferably with one-course concrete, approximately 18,000 square yards.

A complete set of specifications covering the above projects, together with incidental work pertaining thereto; instructions to bidders, and proposal blanks may be had upon request to the City Manager and the depositing of $5.00, which will be refunded upon their return in good condition.

Each proposal must be accompanied by a certified check of $3,000.00 for each project.

The right is reserved to reject any or all proposals.

CLARENCE E. RIDLEY,
City Manager.

OFFICIAL PROPOSALS

Bids: March 4.

State Hospital Work

Kings Park, N. Y.

Sealed proposals for Construction, Heating, Sanitary and Electric Work, Fire House, Kings Park State Hospital, Kings Park, N. Y., will be received by the State Hospital Commission, Capitol, Albany, N. Y., until 3 o'clock p.m., Wednesday, March 4, 1925, when they will be publicly opened and read. Proposals shall be enclosed in an envelope furnished by the State Architect, sealed and addressed, and shall be accompanied by a deposit as a guarantee that bidder will enter into the contract if awarded same. Deposit shall consist of a certified check drawn upon some legally incorporated bank in this State and made payable to the State of New York or money equal to five per cent (5%) of the amount of proposal. The contractors to whom the awards are made will be required to furnish surety company bond in the sum of fifty per cent (50%) of the amount of contract within thirty days after official notice of award of contract and in accordance with the terms of Specifications Nos. 4354, 4355, 4356 and 4357. The right is reserved to reject any or all bids. Drawings and specifications may be examined at the Kings Park State Hospital, Kings Park, N. Y., at the New York Office of the Department of Architecture, 18th Floor, Fuller Building, Broadway and 23d St., and at the Department of Architecture, Capitol, Albany, N. Y. Drawings, specifications and blank forms of proposal may be obtained at the Department of Architecture, Capitol, Albany, N. Y., upon the deposit of a certified check, or money in the sum of $25.00 made payable to the State of New York, for each set of Construction drawings and specifications and $10.00 for each set of Heating, Sanitary or Electric drawings and specifications which deposit will be returned if the drawings and specifications are received in good condition by the State Architect, Sullivan W. Jones, Capitol, Albany, N. Y.

Dated January 26, 1925.

Bids: March 5.

Sewer and Water Lines

Westerville, Ohio.

Sealed bids will be received by the City Manager of Westerville, Ohio, at the office of the City Manager until 12:00 noon, March 5, 1925, for furnishing the necessary labor and materials for sewer and water lines.

The work will consist of the following: 2,000 feet of 4" cast iron water mains, average depth four feet. 2,000 feet of 10" vitrified sewer pipe including 56 Y branches. 5 4" x 4" x 4" cast iron tees, 5 4" gate valves, 5 hydrants, 5 manholes. The average depth of the sewer is 5.5 feet, all laid according to plans and specifications on file in the office of the City Manager, Westerville, Ohio.

A deposit of $2.00 will be required on plans and specifications $1.00 of which will be refunded if plans and specifications are returned to the city manager on or before the day of the letting.

Each bid must be accompanied by a certified check for not less than 5% (five per cent) of the amount of the bid, as evidence of good faith.

The right is reserved by Council of the Village to reject any and all bids.

RICHARD BIEHL,
City Manager.

Feb. 2, 1925.

OFFICIAL PROPOSALS

Bids: Feb. 26.

Pipe Valves, etc.

Springfield, Mass.

Sealed proposals will be received by the Board of Water Commissioners of the Springfield Municipal Water Works, at its office in the Municipal Building, Springfield, Mass., until 11 o'clock A.M., February 26, 1925, for the following material:

150 lengths Class E. 6" cast iron water pipe.
2,300 lengths Class E. 8" cast iron water pipe.
400 lengths Class E. 10" cast iron water pipe.
300 lengths Class E. 12" cast iron water pipe.
25 Class I. 8"—1/16 Bends B. & S.
40 Class I. 8"—1/32 Bends B. & S.
10 Class H. 10"—1/32 Bends B. & S.
10 Class I. 8" Crosses all bell.
4 Class H. 12"x8" Reducers S. & B.
1 Class H. 16"x10" Reducer S. & B.
50 Class K. 4" Sleeves.
50 Class I. 6" Sleeves.
50 Class I. 8" Sleeves.
15 Class H. 10" Sleeves.
25 Class I. 8" Tees B. B.
10 Class H. 10" x 8" Tees B. B.
5 Class H. 12"x8" Tees B. B.
2 Class H. 12"x10" Tees B. B.

The proposal shall state price per ton of 2,000 lbs., F.o.b. Armory, Mass., for each size of pipe and each size and kind of special casting.

All pipe and special castings are to be manufactured in accordance with N. E. W. W. A. specifications.

Bids will also be considered for centrifugally cast pipe.

25—6" Valves B. B.
100—6" Valves B. & F.
50—8" Valves B. B.

The proposal shall state price per valve delivered F.o.b. Armory, Mass.

1,000—3/4" Corporations with tail pieces and with 3/4" extension piece on inlet end.
100—1" Corporations with tail pieces and with 3/4" extension piece on inlet end.
75—1 1/2" Corporations bodies only.
60—1 1/2" Corporations bodies only.
25—3/4" Inverted Key Curb Cocks.
1,000—1" Inverted Key Curb Cocks.
100—1 1/2" Inverted Key Curb Cocks.
100—1 1/2" Inverted Key Curb Cocks.
1,000—1" Inverted Key Stop and Waste Cocks with special handles.
100—1" Tee Handle M. & F. Cocks.
1,000—3/4" Compression Bibbs with hose spouts.

Prices shall be F.o.b. Armory, Mass.

Each proposal shall contain a statement as to the dates and rate of delivery of every item.

Each proposal shall be in a sealed envelope addressed to the Board of Water Commissioners, Springfield, Mass., and the kind of material bid on is to be plainly marked on the outside.

The right is reserved to eliminate any size from the proposal or to accept the proposal for any sizes without the acceptance of the entire bid. The right is also reserved to reject any or all bids or to accept any bid or any portion of any bid which it may be deemed to the interest of the City of Springfield so to do.

For further information and specifications, apply to the Superintendent.

BOARD OF WATER COMMISSIONERS,
SPRINGFIELD, MASS.
H. M. KING, Superintendent.

CONSTRUCTION NEWS

Engineering News-Record, February 19, 1925

The Construction Barometer

Developments in the Present Industrial Situation Indicate Healthy Activity for at Least First Half of Current Year

REASON for confidence in the general industrial outlook and in that for construction particularly, may be found in the following current developments: Steady increase in money value of contracts let since Jan. 1, in all sections of the country except New England and the Middle West; heavier volume than a year ago in the Middle Atlantic states and west of the Mississippi; unfilled orders on books of the U. S. Steel Corp., Jan. 31, heavier than at any time since August, 1923; favorable reports on advance orders in building materials for spring construction; freight loadings well above the 900,000 cars per week mark; active demand for non-ferrous metals products; substantial increase in bank debits; more extensive retail trade than at this time last year; expansion of the automotive industry; undiminished activity in the stock market; better conditions in the agricultural industry than at any time during the past four years.

Engineering News-Record Statistics

Minimum on water-works and excavations, $15,000; other public work, $25,000; industrial buildings, $40,000; commercial buildings, $150,000.

Value of Large Contracts Let In The United States

N. Y., New York—Hotel—Four Hundred Sixty-Four Corp., c/o H. C. Severance,

SUBWAY—NEW YORK, N. Y.

Following are lowest three bids opened by Bd. Transportation, Municipal Bldg., Jan. 29, for constructing subway in Washington Heights, Sect. 3-A, Route 78, from 122nd to 133rd Sts., (A) Rosoff Eng. Co., 152 West 42nd St.; (B) F. Snare Corp., 114 Liberty St.; (C) Mason Co., 17 West 60th St. The unit bids are as follows:

	A	B	C
186,000 cu.yd. earth excavation below and above el. 100	$9.00	$10.00	$9.90
1,030 cu.yd. earth excavation below and above el. 100 for sewers	9.00	10.00	9.90
62,000 cu.yd. rock excavation below and above el. 100	11.80	13.60	14.40
1,300 cu.yd. rock excavation below and above el. 100 for sewers	11.80	13.60	14.40
29,000 cu.yd. concrete masonry	20.00	24.00	23.00
127,000 sq.ft. rubbing concrete surface	.10	.11	.10
4,900 cu.yd. protective concrete masonry	20.00	24.00	23.00
40 cu.yd. rubble stone masonry	11.50	15.00	18.00
10 cu.yd. dry rubble stone masonry	10.00	13.00	15.00
150 cu.yd. brick masonry	38.00	40.00	50.00
10 cu.yd. hollow tile masonry	38.00	35.00	50.00
100 bbl. grout of Portland cement	5.50	8.00	8.00
25 cu.yd. broken stone	5.00	7.00	5.00
13,000 sq.yd. waterproofing, 1 ply	1.00	1.40	1.00
24,200 sq.yd. waterproofing, 3 ply	3.25	2.30	2.50
100 sq.yd. waterproofing, 4 ply	3.25	3.00	4.00
500 sq.yd. waterproofing, 5 ply	5.30	3.30	5.00
200 sq.yd. waterproofing, 6 ply	6.15	4.00	6.00
100 sq.yd. waterproofing, dry ply	.70	1.20	1.00
1,000 cu.yd. waterproofing brick in asphalt mastic, 1 layer	49.00	50.00	50.00
10 cu.yd. waterproofing brick in ashpalt mastic, 2 layers	45.00	50.00	50.00
600 lin.ft. C. I. pipe class "A", 3-inch	1.50	2.00	1.25
250 lin.ft. C. I. pipe, class "A", 4-inch	2.00	3.00	1.50
750 lin.ft. C. I. pipe, class "A", 6-inch	3.00	3.50	2.50
300 lin.ft. C. I. pipe, class "A" 8-inch	3.20	4.50	3.00
650 lin.ft. C. I. pipe, class "A", 10-inch	3.80	6.00	4.00
2,200 lin.ft. C. I. pipe, class "A", 12-inch	4.75	7.00	5.00
100 lin.ft. galvanized steel pipe, 3-inch	1.25	2.00	1.50
100 lin.ft. galvanized steel pipe, 4-inch	1.70	2.50	2.00
10 lin.ft. galvanized steel pipe, 8-inch	3.00	5.50	4.00
50 lin.ft. galvanized steel pipe, 10-inch	4.00	7.50	5.00
163,300 duct ft. tunnel ducts as per Sect. 400	.25	.25	.35
550 cond.ft. 3-in. fibre conduits	.40	.40	.40
2,200 ton steel—riveted	125.00	131.00	148.00
4-ton architectural steel and iron	350.00	500.00	400.00
550 sq.ft. sliding doors, steel panels	7.00	5.50	6.50
2 counterbalanced emergency exit covers	400.00	550.00	500.00
2,800 ton steel beams and shapes	125.00	131.00	148.00
320 ton steel rods and bars	100.00	110.00	100.00
20 ton miscellaneous iron castings	250.00	340.00	200.00
6,400 lb. special wire forms	.25	.25	.20
4,100 lin ft. wood handrail	.50	1.00	.50
5,200 sq.ft. steel gratings for ventilation	6.00	3.30	4.50
100 sq ft. vault lights	3.50	3.00	4.00
7,600 sq.yd. sidewalk restoration	3.00	4.00	3.00
17,300 sq.yd. street repavement—asphalt	4.50	6.50	5.00
10 lin.ft. 6-in. bluestone curb	2.50	5.00	4.20
100 lin.ft. 8-in. granite curb	6.00	6.00	5.00
60 sq.yd. upper 3-in. concrete walls	2.50	3.50	2.50
1,450 sq.yd. park surface restoration	3.00	4.00	2.00
12,000 lin.ft. electric conduit, ¾-in.	.35	.50	.40
50 lin.ft. electric conduit, 1½-in.	.50	1.00	.60
11,000 lin.ft. electric conduit, 1-in.	.45	.60	.50
1,100 4 x 4 x 3 in. C. I. outlet boxes	1.50	3.50	2.25

	A	B	C
10 6 x 6 x 4 in. C. I. pull boxes	8.00	10.00	6.00

Calif., Oakland—Apartment—J. K. Calley, 1159 Green St., San Francisco, 4 story and basement, concrete and timber, Grand Ave., to M. C. Ingraham, 165 Fell St., San Francisco, $153,250. Noted Jan. 29.

Calif., Sacramento—Club—L. F. Stark, archt., Oschsner Bldg., masonry and carpentry contract for 14 story, Class A club, 11th and J Sts., to Lindgren-Swinerton, Inc., Standard Oil Bldg., San Francisco, for B. P. O. E. $330,000.

Calif., San Jose—Exchange—Pacific Telephone & Telegraph Co., 333 Grant Ave., San Francisco, structural steel work for 6 story and basement, Class "A" annex, Santa Clara St., to Judson Mfg. Co., 604 Mission St., San Francisco, approximately $23,000; general contract, to Monson Bros., 251 Kearny St., San Francisco, $175,000.

Calif., South Pasadena—Theatre—West Coast Theatres, Inc., Knickerbocker Bldg., Los Angeles, 2 story, 90 x 125 ft., brick, Oxley and Fair Oaks Aves., to W. G. Reed, 814 Pacific Southwest Bldg., Long Beach, approximately $165,000. Noted Nov. 13.

Federal Government Work

PROPOSED WORK

Mass., Boston—Storehouse—Treas. Dept., Wash., D. C., plans storehouse and repairs at Quarantine Station, here.

Va., Quantico—Pier Repairs—Spec. 5058—Bureau Yards & Docks, Navy Dept., Wash., D. C., plans repairs to pier at Marine Barracks, here.

Mo., St. Louis—Post Office—U. S. Treas. Dept., Wash., D. C., having preliminary plans prepared brick, steel and stone post office, 4th and Chestnut Sts., here.

BIDS DESIRED

R. I., Providence—Dredging—Mar. 20, by U. S. Engineer Office, dredging in Thames River, Conn.; adv. E. N.-R. Feb. 19.

N. Y., Buffalo—Cable—Mar. 9, by Supt. Lighthouses, Buffalo, 17,000 ft. armored submarine cable; adv. E. N.-R. Feb. 19.

Pa., Phila.—Boiler House—Mar. 9, by Quartermaster Depot, 21st St. and Oregon Ave., constructing brick boiler house; adv. E. N.-R. Feb. 19.

O., Kenton—Post Office—Mar. 17, by Treas. Dept. at office Supervising Archt., Wash., D. C., 1 story post office, here; adv. E. N.-R. Feb. 19.

Tex., Gilmer—Post Office—Mar. 16, by Treas. Dept. at office Supervising Archt., Wash., D. C., 1 story, 60 x 63 ft. post office, here; adv. E. N.-R. Feb. 19.

H. T., Pearl Harbor — Hangars — Spec. 5046—Apr. 8, by Bureau Yards & Docks, Navy Dept., Wash., D. C., hangars, here, and at Coco Solo; adv. E. N.-R. Feb. 19.

BIDS RECEIVED

Mass., Boston—Seawall and Breakwater—Treas. Dept. at office Supervising Archt., Wash., D. C., rebuilding seawall, breakwater dredging and replacing fender piles, here, from Rendle Corp., Chelsea, (1) $4,762 (2) $11,402 (3) alt. $20,462. Noted Jan. 22.

Ala., Tuskegee—Filtration Plant—U. S. Veterans Bureau, Room 791, Arlington Bldg., Wash., D. C., filtration plant at U. S. Veterans Hospital 91, here, from A. C. Samford, Montgomery, $42,000. Noted Jan. 15.

Ind., Indianapolis — Office, etc. — U. S. Veterans Bureau, Room 791 Arlington Bldg., Wash., D. C., regional office and dispensary on 7th and 8th floors of test building, here, from E. C. Stratmann, Indianapolis, $14,600.

Virgin Island, St. Thomas—Oil Engine—Spec. 5062—Bureau Yards & Docks, Navy Dept., Wash., D. C., oil engine, here, from St. Marys Oil Engine Co., 1409 North 4th St., St. Charles, Mo., (1) $3,500 (2) $3,000 (3) $25 (4) $15. Noted Jan. 22.

CONTRACTS AWARDED

Mass., Newburyport—Stone—U. S. Engineer, 1703 Custom House, Boston, placing stone in Newburyport jetty, here, to P. H. Doyen Co., South Portland, Me., $2.85 per ton. Noted Jan. 29.

Tex., Galveston — Jetty Repairs — U. S. Engineer Office, Galveston, jetty repairs to north jetty, to Scott & Brass, New Orleans, La., $6.68 for Sects. 1 to 4, and $1.50 for overstones. Noted Jan. 8.

Wash., Puget Sound—Boiler Plant—Spec. 5041—Bureau Yards & Docks, Navy Dept., Wash., D. C., extension to boiler plant, here, to Newport Contg. & Eng. Co., Law Bldg., Newport News, Va., $90,197 (180 days), also concrete chimney, here, to Weber Chimney Co., 332 South Michigan Ave., Chicago, Ill., $8,405, (120 days). Noted Jan. 29.

Calif., San Diego—Repairs to Pier—Spec. 5070—Bureau Yards & Docks, Navy Dept., Wash., D. C., repairs to target pier, here, to Barclay & Schamild, 2350 Columbia St., $3,787.

Unclassified

PROPOSED WORK

Filling Station — Lowell, Mass. — Gulf Refining Co., Frick Annex, Pittsburgh, Pa., plans filling station, Chelmsford St., here. Private plans.

Swimming Pools, etc.—Apex, N. C.—See "Buildings—Commercial."

Underpass—Greensboro, N. C.—State Hy. Comn., Raleigh, making plans grading and constructing underpass under Atlantic & Yadkin R.R. known as State Project 537-C, here. $35,000. C. H. Upham, engr.

Docks—South Jacksonville, Fla.—Election Mar. 4. $25,000 bonds to develop municipal docks. P. C. Marion, chn. city council.

Park, etc.—Titusville, Fla.—Election Mar. 10, $35,000 bonds for park and recreation fields. Address City Commissioners.

Tunnel — Missionary Ridge (mail Chattanooga), **Tenn.** — Hamilton Co. (Chattanooga) making preliminary surveys for tunnel, here. $400,000-$500,000. E. G. Meenell, Court House, Chattanooga, engr.

Grade Separation—Port Huron, Mich.—St. Clair Co., Pere Marquette R.R. and Grand Trunk R.R., County Bldg., making plans steel encased in concrete viaduct with rein.-con. piers and walls, to carry traffic on 24th St. over tracks. F. E. Beard, Port Huron, co. road comr.

Grandstand — West Allis, Wis. — Dept. Agriculture, Capitol, Madison, had revised plans prepared rein.-con. grandstand addition, at State Fair Park. $150,000. A. Peabody, Madison, engr.

Amphitheatre — University City, Mo. — Flint Garrison, et al, 1627 Locust St., St. Louis, having preliminary plans prepared open air theatre, 3,000 seating capacity, Olive St. Rd. and Creve Coeur Lake car line, here. $100,000 up. J. C. Stephens, Chemical Bldg., St. Louis, engr.

Transmission Line—Oklahoma—City of Butler making preliminary plans electric distribution system in Butler and 20 mi. electric transmission line to Clinton. $28,000. Engineer not selected.

Transmission Line—Oklahoma—City of Carter voted $26,000 bonds for 14 mi. electric transmission line to Elk City. V. V. Long & Co., 1300 Colcord Bldg., Oklahoma City, engrs.

Transmission Line—Oklahoma—City of Hinton making preliminary plans electric transmission line to Geary. $30,000. Engineer not selected.

Stadium—Norman, Okla.—University of Oklahoma takes bids in March, 1 story, 180 x 390 ft., rein.-con., plain foundation, on campus. $150,000. Sorey & Vahlberg, Braniff Bldg., Oklahoma City, archts. Noted Dec. 4.

Athletic Park—Eureka, Calif.—City plans athletic park east of Sequoia Park. $60,000. A. W. Kildale, city clk.

Electrolier System—Fresno, Calif.—Making plans electrolier system on Willis Ave. between Blackstone and Fresno Sts., Platt Ave. between 5th and 12th Sts., 5th, 6th, 7th, 8th, 9th, 10th and 11th Sts. between Platt and Kerchkoff Sts. To exceed $25,000. W. Stranahan, city engr.

Unclassified (Continued)

Tunnel—Long Beach, Calif.—See "Streets and Roads."

Elimination of Grade Crossing — Long Beach, Calif.—City and Pacific Electric Ry., Pacific Electric Bldg., Los Angeles, plan grade crossing under railroad tracks at Pacific Ave. $75,000. R. D. VanAlstine, city engr.

Gas Holder — Los Angeles, Calif. — Los Angeles Gas & Electric Co., 810 South Flower St., made plans gas storage holder, 245 ft. diam., 375 ft. high, Duncommon St. $650,000 or more. Bartlett-Hayward Co., Central Bldg., engrs.

Street Lighting System—Redondo Beach, Calif. — Made plans ornamental street lighting system on South Catalina St. and The Esplanade. To exceed $75,000.

Street Lighting System—San Bernardino, Calif. — Plans ornamental street lighting system on Arrowhead Ave. between 2nd and 13th Sts., and G St. between Rialto and 4th Sts. $90,000-$100,000. C. E. Johnson, city engr.

Street Lighting System—Torrance, Calif. —Plans ornamental street lighting system on Western Ave., Torrence and Carson Sts., etc. To exceed $95,000. J. J. Jessup, city engr.

Transmission Lines, etc.—Ontario—Hydro Electric Power Comn. of Ontario, 190 University Ave., Toronto, made plans extending transmission lines, addition to generating and substations $12,000,000. F. A. Gaby, ch. engr.

BIDS DESIRED

Asphalt Plant—East Concord, N. Y.—Feb. 21, by Erie Co. Purch. Agt., 76 Exch. St., Buffalo, erecting asphalt plant, and furnishing one 8 ton and one 3 ton asphalt steam rollers, one gasoline caterpillar crane with ¾ yard bucket and 35 to 40 ft. boom, here.

Fire Sprinklers—Brooklyn, N. Y.—Mar. 11, by State Hospital Comn., Capitol, Albany, automatic fire sprinklers at Brooklyn State Hospital, here; adv. E. N.-R. Feb. 19.

Subway—Phila., Pa.—Mar. 17, by H. E. Ehlers, at office Dept. City Transit, 1211 Chestnut St., 7,184 lin.ft. 4 track subway in Broad St. from Filbert to Stiles Sts.; adv. E. N.-R. Feb. 19.

Heating and Ventilating—Kansas City, Mo.—See "Buildings—Commercial."

Subway—Martinez, Calif.—Mar. 3, by supervs. Contra Costa Co., constructing Christie Crossing subway, steel and concrete, at Santa Fe R.R. tracks in Franklin Corners. To exceed $50,000. R. R. Arnold, Martinez, co. surv. Noted Aug. 14.

Wall—Fraser River, B. C.—Feb. 26, by S. E. O'Brien, minister Dept. Pub. Wks., Ottawa, Ont., brush and sand filled retaining wall, here. $40,000.

BIDS RECEIVED

Pier Shed—New York, N. Y.—M. Cosgrove, comr. Docks, Pier A, foot Battery Pl., Feb. 11, pier shed and bulkhead shed for Pier 2, North River, Contr. 1847, from O'Day Constr. Co., 1639 Bway., $406,954. Noted Feb. 5.

Roofing, etc.—New Orleans, La.—Bd. Port Comrs., New Court House, sheet metal work and glazing on Claiborne Ave. shed, from Blattman-Weeser Sheet Metal Wks., 1001 Toulouse St., $28,411; structural steel from Rochester Bridge Co., New Orleans, $33,-606; erecting and painting steel, from Lukens Steel Co., 626 South Peters St., $43,-865; erecting structural steel, from B. N. Davis, 831 Magazine St., $8,140; roofing shed (1) tar and gravel or tar and slag, (2) asphalt or asphalt and slag (3) asphalt and asbestos or slag, from J. J. Clarke Co., New Orleans, (1) $39,369 (2) $39,419, from Johns-Manville Co., Inc., Magazine and Gravier Sts., (3) $38,591.

Seawall—San Diego, Calif.—See "Excavation, Drainage, Irrigation, Levees."

CONTRACTS AWARDED

Subway—New York, N. Y.—Bd. Transportation, 49 Lafayette St., subway in Washington Heights, Sect. 3, Route 78, to Heyman & Goodman, 140 Wadsworth Ave., $4,857,000; also Sect. 3A, Route 78, to Rosoff Eng. Co., 152 West 42nd St., $4,600,-000. Noted Jan. 29 and Feb. 5.

Borings—New York, N. Y.—Bd. Transportation, Municipal Bldg., borings along West Bway., Geenwich, 6th and 8th Aves., East 53rd, Wall, Fulton, Church, Houston and Worth Sts., Agreement "DQ," Manhattan Boro., to Osborne Drilling Co., 120 Liberty St., $53,173; also miscellaneous construction providing sewer and water connections at various locations, Agreement "DO," Bronx Boro., to Fox Reynolds Co., 81 East 125th St., $7,615. Noted Jan. 15.

Boardwalk—Long Beach, Calif.—Constructing board walk on piles, to J. L. Frazer, Kreis Bldg., $27,400. Engrs. est. $26,220. Noted Sept. 4.

Material and Equipment

PROPOSED WORK

Tar—Trenton, N. J.—Mercer Co. plans to purchase tar. $500,000. H. F. Harris, Court House, engr.

Street Sweeper—Palo Alto, Calif.—Plans to purchase 1 motor driven revolving broom (street sweeper). $7,000. J. F. Bxybee, Jr., city engr.

Crusher, Hoist, etc.—San Jose, Calif.—Santa Clara Co. plans to purchase one No. 2 Reduction Tellsmith Crusher, bunker and hoist, caterpillar tractor and road grader. R. Chandler, co. surv.

BIDS DESIRED

Rollers and Crane, etc.—East Concord, N. Y.—See "Unclassified."

Lumber and Piles, etc.—New York, N. Y. —Feb. 25, by J. E. Bowe, comr. Purchase, Municipal Bldg., lumber and piles, steel plates and reinforcing bars, to Dept. Plant & Structures.

Road Roller—Columbia, S. C.—Feb. 24, one 10 ton road roller, steam or motor driven (old roller to be taken in part exchange). W. S. Tomlinson, City Hall, engr.

Dragline Machine — Greenville, Miss. — Mar. 10, by Comrs. Black Bayou D. D., Washington Co., self propelling dragline machine with internal combustion engine, etc. O. C. Kulicka, secy. and treas.; adv. E. N.-R. Feb. 19.

Rock Crusher—Lebanon, Tenn.—Feb. 25, by City, rock crusher with elevator and screen.

Granite Block—Cleveland, O.—Feb. 20, by City, granite block, asphalt filler, asphalt, cement and paving brick. R. Hoffman, City Hall, engr.

Steam Shovels—Columbus, O.—W. S. Harman, Hartman Bldg., in market for 2 large steam shovels.

Grader — Manitowoc, Wis. — Manitowoc Co., c/o J. Connell, highway comr., in market for 3 motor patrol graders.

Road Oil—Marshfield, Wis.—Feb. 23, by J. A. Schindler, city clk., 5 cars with privilege of 2 or more cars 50 to 60% asphalt and alternate on 60 to 65% asphaltic content.

Road Oil—Ripon, Wis.—Feb. 24, by F. A. Preston, city clk., 20,000 gal. No. 5 road oil having 50 to 60% asphaltic content.

Sand and Gravel Equipment — Good Thunder, Minn.—A. W. Darge, in market for sand and gravel equipment.

Cement, etc. — Minneapolis, Minn.—Feb. 23, by F. S. Gram, city purch, agt., 2,000 tons asphaltic cement, 600 tons pitch, and 50,000 gal. refined tar. N. W. Elsberg city, engr.

Oil Distributer — Minneapolis, Minn. — Feb. 26, by F. S. Gram, city purch. agt., one oil distributer mounted on truck.

Tar — Minneapolis, Minn. — Feb. 24, by F. S. Gram, city purch agt., 500,000 gal. refined tar. N. W. Elsberg, city engr.

Tractor — Winona, Minn. — Mar. 3, by City, one 5 ton caterpillar tractor. G. Hoffmann, city clk.

Road Machines, etc. — Grand Forks, N. D. — Mar. 6, by Commissioner, Grand Forks Co., 16 road maintenance machines for either 2 or 4 horses, 6 to 8 ft. blades, weighing from 900 to 16,000 lbs. each. M. O. Haugan, co. aud.

Graders—Jamestown, N. D.—Mar. 3, by A. H. Sherman, aud. Greene Co., one 12 ft. heavy road grader.

Asphalt Cement, etc. — Hamilton, Ont. — Feb. 27, by S. H. Kent, city clk., addressed to T. W. Jutten, mayor, chn. Bd. control, City Hall asphalt cement, broken stone, screenings, limestone dust, asphalt sand, sand and gravel, pipe, etc.; adv. E. N.-R. Feb. 19.

Asphalt, etc.—Ottawa, Ont.—Feb. 24, by Bd. Control, City Hall, asphalt, asphalt filler, brick, c.i. pipe, cement, pig lead, broken stone, sand fuel oil, castings, etc.

Crane—Melbourne, Australia—Apr. 1, by Victorian Government Rys., one 15 ton electric traveling Goliath crane.

BIDS RECEIVED

Asphalt Sand—Brooklyn, N. Y.—J. A. Guider, boro pres., Boro Hall, Feb. 11, 10,-000 cu.yd. asphalt sand, from Hygrade Builders Supply Co., 6th St. and 2nd Ave. $12,850; 5,000 cu.yd. paving and concrete sand, from T. E. McCormick, 325 Rutland Rd., $5,725. Noted Feb. 5.

Broken Stone, etc. — Long Island City, N. Y.—M. E. Connolly, pres. Queens Boro., Queens Subway Bldg., Feb. 9, from Hygrade Builders Supply Co., 6th St. and 2nd Ave., Brooklyn, 28,000 cu.yd. broken stone and screenings $83,160, 15,000 tons steam ashes $22,950, 6,500 cu.yd. sand grit or broken stone chips of trap rock $15,795, 15,-000 tons steam ashes $22,950; from Standard Oil Co., 26 Bway., New York City, 600,-000 gal. road oil $36,480, 1,300 tons asphaltic cement $27,300, 350,000 gal. asphaltic macadam binder $25,480; from Warner Quinlan Co., 79 Wall St., New York City, 25,000 gal. asphalt for patching $4,388, 60,-000 gal. fuel oil $3,930; from Terminal Supply Co., 25,000 vitr. paving bricks $1,495, 864 ft. 12 in. iron pipe $1,970; from E. E. Buehler, 103 Park Ave., New York City, $50,000 wood paving blocks $2,728; from Hastings Pavement Co., 25 Broad St., New York City, 100,000 asphalt paving blocks, $9,531. Noted Feb. 5.

Sand Grit, etc.—New York, N. Y.—H. Bruckner, pres. Bronx Boro., 3rd and Tremont Aves., Feb. 10, from J. W. Farrell, Valentine Ave., 9,000 cu.yd. sand grit, $16,550; from Standard Oil Co., 26 Bway., 1,500 tons asphaltic cement $33,330, 750,000 gal. bituminous road surfacing material $50,250; from P. Solomon, 1358 Brook Ave., 5,000 bags Portland cement $3,425; from Grangers Mfg. Co., Weststock, Mass., $4,865; from Barrett Co., 17 Battery Pl., 150,000 gal. tar for patching $23,850, 300,-000 gal. bituminous road material $32,-700, 75 tons pitch joint filler $2,063; from J. A. Maloney Co., 1170 Bway., long leaf yellow pine $9,680; from Gallagher Shand, 420 East 105th St., 1,000 cu.yd. concrete and paving sand $1,700; from Calvin Tompkins, 30 Church St., 7,500 cu.yd. binder stone $14,850; from Hygrade Builders Supply Co., 6th St. and 2nd Ave., Brooklyn, 500 cu.yd. hard coal ashes, $1,370; from Ames Building Material Co., 3441 Kingsbridge Rd., 10,000 cu.yd. steam ashes $16,700; from Z. Mahoney, 557 46th St., Brooklyn, 10,000 cu.yd. asphalt sand, $12,800; from United Sand & Gravel Co., 425 West 216th St., 4,000 cu.yd. 1½ in. waterbound macadam stone, etc. $27,625. Noted Feb. 5.

Sand Grit, etc. — New York, N. Y. — J. Miller, pres. Manhattan Boro., Municipal Bldg., Feb. 16, 2,500 cu.yd. sand grit and 3,000 cu.yd. concrete and paving sand, from Gallagher-Shand Co., 420 East 105th St., $4,125 and $4,500 respectively; 50,000 special 5 in. granite paving blocks, from St. George Granite Co., 90 West St., $7,425; 4,000 cu.yd. coarse aggregate for concrete, from Hygrade Builders Supply Co., 6th St. and 2nd Ave., $8,760; 500 tons asphalt joint filler, from Standard Oil Co., 26 Bway., $12,290; 4,000 tons inorganic dust and 8,000 cu.yd. ¾ in. binder stone, from New York Trap Rock Co., 101 Park Ave. $25,960 and $15,120 respectively; two 5 ton trucks, from Pitts Motors, Inc., $9,920.

CONTRACTS AWARDED

Steel—Pittsburgh, Pa.—See "Buildings—Commercial."

Sand and Gravel—Minneapolis, Minn.—F. S. Gram, city purch. agt., 7,500 cu.yd. sand and 15,000 cu.yd. gravel, to J. Wunder Co., Bway. and K Sts., for Water Dept. Noted Jan. 15.

Lumber and Steel—Kansas City, Mo.—See "Buildings—Commercial."

Gas Tank—St. Louis, Mo.—Laclede Gas Light Co., 1017 Olive St., 2,000,000 cu.ft. steel gas tank, connections, etc., at 141 Park Ave., to Bartlett-Hayward Co., 200 Scott St., Baltimore, Md. Engrs. est. $150,000.

CONSTRUCTION NEWS

Engineering News-Record, February 26, 1925

The Construction Barometer

Production of Basic Materials Active But Not to the Point of Over-expansion—Demand Gaining as Spring Approaches

THE basic materials output is picking up speed from week to week, in anticipation of the spring demand. Sufficient caution is being exercised to prevent over-expansion in any one line. The charts show steady seasonal gains in most of the principal materials, while in the case of common brick, more than the usual quantity is stored at yards for use between now and June, 1925. Cement production does not, as a rule, begin to revive from the mid-winter lethargy until March, and continues to gain from that time on until late summer and early autumn, after which time the trend is usually downward. Steel demand is approaching the August, 1923, level as shown by the chart of unfilled orders. Pine demand appears to be gaining slightly over fir, since in the former, orders are less than one per cent below output, while in the latter, they are at least three per cent below production.

Engineering News-Record Statistics

Minimum on water-works and excavations, $15,000; other public work, $25,000; industrial buildings, $40,000; commercial buildings, $150,000.

Gravel Pit Machinery—Rochester, Wis.—Racine Co., W. A. Bechthold, Racine, highway comr., plans to purchase electrically operatde outfit for gravel pit, here.

Tractor, etc.—Ashley, N. D.—McIntosh Co. plans to purchase 1 caterpillar tractor, 1 elevator grader, blade grader and covered dump wagons. J. Billigmeier, co. aud.

Piling, etc.—Grand Forks, N. D.—C. J. Evanson, city aud. rejected bids Dec. 24, for 24 pieces 32 ft., 93 pieces 51 ft., and 222 pieces 42 ft. piling, all 6 in. top and 14 in. butt, 160,000 ft. sheet piling, 170,000 ft. dimensions on timbers, 5,500 cu.yd. rock and 2,400 cu.yd. excav. for dam in Red River of the North. Noted Dec. 18.

Road Roller—Modesto, Calif.—Supervs. Stanislaus Co., plan to purchase 10 ton (Austin type) road roller. J. H. Hopkins, co. surv.

BIDS DESIRED

Bituminous Material — Albany, N. Y. — Mar. 10, by A. W. Brandt, comr. highways, 55 Lancaster St., bituminous material, etc.; adv. E. N.-R. Feb. 26.

Tractor—Hoboken, N. J.—W. F. Stocker, 501 8th St., in market for caterpillar tractor, gas driven.

Cranes—Allenport, Pa.—Pittsburgh Steel Co., Union Trust Bldg., Pittsburgh, taking bids 8 cranes, 7½ to 20 ton capacity for plant, here.

Crane—Latrobe, Pa.—Vulcan Mould & Iron Wks., in market for 20 ton overhead electric crane.

Sand Mixer — Pittsburgh, Pa. — United Eng. & Fdry. Co., Farmers Bank Bldg., taking bids one sand mixer. W. E. Sanborn, purch. agt.

Crushed Stone, Gravel, etc.—Baltimore, Md. — Mar. 4, by Bd. Awards, crushed stone, slag, cinders, gravel, sand, 100,000 red wire cut vitr. blocks 3½ in. wide, 100,000 red wire cut vitr. blocks 3 in. wide, and 30,000 buff repressed vitr. blocks, 3 in. wide, lumber, also bituminous flushing of roads and streets, 150,000. sq.yd. ½ gal. with cover, 15,000 sq.yd. ¼ gal. without cover, and 350,000 sq.yd. ½ gal. with cover. B. L. Crozier, City Hall, highways engr.

Stone, etc.—Towson, Md.—Mar. 3, by Comrs. Baltimore Co., Courthouse, furnishing 45,400 tons stone, 106,450 gal. patch material, 211,000 gal. tar or oil. S. A. Green, Courthouse, road engr.

Clam Shells—New Orleans, La.—Mar. 3, by Comn. Council, 15 barges of clam shells, f.o.b. bank of New Basin Canal either at west end or vicinity opposite municipal repair plant.

Lead Cable—Cleveland, O.—Feb. 27, by City, c/o W. H. Hoare, purch. agt., for five thousand 16 conductor and seven thousand five hundred 10 conductor cable.

Asphaltic Cement, etc.—Detroit, Mich.—Feb. 28, by Dept. Purchases & Supplies, City Hall, 20,000 tons refined asphaltic cement, 25,000 yd. washed bank sand, 20,000 yd. gravel and 2,000 yd. pebbles.

Crane—Portage, Wis.—Columbia Co., c/o J. T. Henton, highway comr., in market for 1 crane for 40 ft. span, lathe, and drill press for repairing road machinery.

Patrol Graders—Port Washington, Wis.—Mar. 5, by W. J. Ubbink, hydro comr. Ozaukee Co., 1 or more power patrol graders for road work.

Tarvia—Two Rivers, Wis.—Mar. 2, by Bd. Pub. Wks., H. C. Gowran, chn., 20,000 gal. tarvia B or equal, 16 bbl. tarvia A or equal, 8 bbl. tarvia K.P. or equal and 56 bbl. tarvia X or equal.

Road Oil, etc.—Wausau, Wis.—Mar. 2, by Bd. Pub. Wks., 50,000 gal. tar product road oil and 3 carloads calcium chloride.

Road Machines—Bismarck, N. D.—Mar. 5, by Comrs. Burleigh Co., 4 one-man operated, horse-drawn patrol road machines, of 1,200-1,500 lbs. F. A. Johnson, co. aud.

Graders, etc.—Bottineau, N. D.—Mar. 5, by W. M. Martin, aud. Bottineau Co., 3 patrol graders with 8 or 10 f.t blades, and 1 gravel loading outfit.

Tractor—Onida, S. D.—Mar. 4, by C. L. Clessner, aud. Sully Co., one tractor, caterpillar type, large or small.

Pig Lead, etc. — Dallas, Tex. — M. G. James, city secy., taking bids 40,000 lb. pig lead, 30,000 lb. ¾ in. and 6,000 lb. 1 in. lead pipe.

Rock—Long Beach, Calif.—City Council taking bids 1,500,000 tons rock for bulkheads. R. D. Van Alstine, city engr.

Steam Shovel — Medford, Ore. — R. I. Stuart taking bids ½-yd. capacity steam shovel, caterpillar traction.

BIDS RECEIVED

Cement — Baltimore, Md.—Bd. Awards, cement, from Hudson Cement & Supply Co., Westwood and Whitmore Aves., $2.72 per bbl.

CONTRACTS AWARDED

Broken Stone, etc. — Long Island City, N. Y.—M. E. Connolly, pres. Queens Boro., Queens Subway Bldg., to Standard Oil Co., 26 Bway., New York City, 600,000 gal. road oil $36,480, 1,300 tons asphaltic cement $27,300, 350,000 gal. asphaltic macadam binder $25,480; to Warner Quinlan Co., 79 Wall St., New York City, 25,000 gal. asphalt for patching $4,388, 60,000 gal. fuel oil $3,930. Noted Feb. 19.

Sand Grit, etc.—New York, N. Y.—H. Bruckner, pres. Bronx Boro., 3rd and Tremont Aves., to J. W. Farrel, Valentine Ave., 9,000 cu.yd. sand grit, $16,550; to Standard Oil Co., 26 Bway., 1,500 tons asphaltic cement $33,330, 750,000 gal. bituminous road surfacing material $50,250; to P. Solomon, 1358 Brook Ave., 5,000 bags Portland cement $3,425; to Grangers Mfg. Co., Westock, Mass., $4,865; to Barrett Co., 17 Battery Pl., 150,000 gal. tar for patching $23,850, 300,000 gal. bituminous road material $32,700, 75 tons pitch joint filler $2,063; to J. A. Maloney Co., 1170 Bway., long leaf yellow pine $9,680; to Gallagher Shand, 420 East 105th St., 1,000 cu.yd. concrete and paving sand $1,700; to Calvin Tompkins, 30 Church St., 7,500 cu.yd. binder stone $14,850; to Z. Mahoney, 557 46th St., Brooklyn, 10,000 cu.yd. asphalt sand, $12,800; to United Sand & Gravel Co., 325 West 216th St., 4,000 cu.yd. 1½ in. waterbound macadam stone, etc. $27,625. Noted Feb. 19.

Road Oil — Watertown, Wis. — F. S. Weber, city clk., 120,000 gal. road oil to Amer. Mexican Refining Co., 11 South La Salle St., Chicago, Ill., at $0.0628 per gal. Noted Feb. 5.

Portand Cement and Timber—Waukon, Ia.—C. A. Palmer, aud. Allamakee Co., 500 bbl. Portland cement delivered to New Albion, to C. Birch Lumber Co., Waukon; 500 bbl. Portland cement delivered to Waukon, to Eaton & Jones, Waukon; and 100,000 ft. bridge timber, to W. W. Saylor & Co., Waverly. Noted Jan. 20.

Rock Asphalt—San Antonio, Tex.—For 2,000 tons rock asphalt for repairs on highways within radius of 40 mi. of here, to Colgazier & Hoff, 022 Austin St., $10.30 per ton.

CONSTRUCTION NEWS

Engineering News-Record, March 5, 1925

Some of the Week's Large Projects

AMONG the announcements for the current week of proposals, bids desired and received and contracts awarded, are the following big jobs:

Proposed Work

Roads and bridges, North Carolina, State Legislature authorized $20,000,000 bonds for roads and bridges during next 2 years.

Plant, Bagnell, Mo., Missouri Hydro-Electric Power Co., Kansas City, having plans prepared for hydro-electric plant, $10,600,000.

Waterworks, San Antonio, Tex., plans purchasing and improving waterworks, $6,500,000.

Power development, Three Rivers, Que., United Mfg. Co. plans water power development, $6,000,000.

Hotel, Boston, Mass., Statler Hotel Corp., New York City, plans 14 story building, $4,000,000.

Distribution Lines, Oregon, Pacific Telephone & Telegraph Co., Portland, plans to extend and improve lines, $3,000,000.

Bakery, Cambridge, Mass., National Biscuit Co. plans bakery, $3,000,000.

Hotel, Coney Island, N. Y., J. Palmieri plans building, $3,000,000.

Hotel, Detroit, Mich., P. Miller having plans prepared, $2,500,000.

Railroad improvement, Ohio, Hocking Valley R.R. Co. plans complete double tracking line between Columbus and Fostoria, $2,500,000.

Bids Wanted On Big Jobs

Mill, East Youngstown, O., Youngstown Sheet and Tube Co., soon takes bids, $2,000,000.

Church, Pittsburgh, Pa., Sacred Heart Roman Catholic Congregation, $1,900,000.

Garage, Boston, Mass., J. M. Howe, $1,500,000.

Office, Philadelphia, Pa., J. C. Kahn, $1,500,000.

High School, New Bedford, Mass., by City, $1,000,000.

Garage and office, Cleveland, O., Motors Realty Co., $1,000,000.

Hotel, New Orleans, La., Weiss & Dreyfous, Archts., $1,000,000.

Large Contracts Let During Week

Power Station, Sioux City, Iowa, Sioux City Gas & Electric Co. to U. G. I. Contg. Co., Philadelphia, Pa., $2,000,000.

Plant, Kansas City, Mo., Columbian Steel Tank Co. will build by day labor, $2,000,000.

Schools, Cleveland, O., Buildings for University School by Hunkin-Conkey Constr. Co., $1,000,000.

Power House, Lowell, Mass., Wamfsit Power Co. to Stone and Webster, $1,000,000.

Waterworks

PROPOSED WORK

Mass., Canton—City Water Comrs., plan new pumping station and new stand pipe on Hogh St., and elevation of Ponkapoag Standpipe. To exceed $15,000. Engineer not selected.

Mass., Reading — Bd. Selectmen plans mains in Libby Ave. and Forest St., $20,000 appropriated; also storm water main from east side of John St. to west side of Main St., $15,000 appropriated. Engineer not selected.

N. J., Trenton—Water Dept. plans water service station, Brunswick Ave. $60,000. A. Bugbee, City Hall, engr.

Fla., Palmetto—Voted $50,000 bonds, extending water mains.

La., Augurs—Making preliminary plans waterworks and distribution system. $37,000. C. D. Evans, Levy Bldg., Shreveport, engr.

Tenn., Nashville — Bd. Pub. Wks., G. Reyer, supt., City Hall, appropriated $24,600, relaying mains under streets to be permanently paved in 1925. H. E. Howse, mayor.

O., Cleveland—Takes bids in spring 800 ft. iron sheet piling to depth of 60 ft. in order to divert subterranean currents that have undermined Division Ave. Filtration Station. $300,000. L. A. Quayle, City Hall, engr.

O., Cleveland—City plans new filtration plant in Nottingham Dist., and 4½ mi. intake tunnel in Lake Erie. A. V. Hamlin, City Hall, engr.

O., Niles — Plans mains in 11 streets. $50,000-$75,000. B. Holloway, Niles, engr.

O., Sebring — Takes bids in spring, new standpipe and new and enlarged water mains. $100,000.

Wis., Kenosha — Plans extending c.i. mains in 5th, Hamilton and Howland Aves., Beverly, Kenwood, Plymouth and Belmont Places, Erie, Putman, Michigan and Howard Sts. To exceed $15,000. R. M. Smith, City Hall, engr.

Wis., Madison — City, c/o L. A. Smith, supt., making plans 6 m.g. reservoir and 20 in. mains to connect with distribution system. $100,000. E. E. Parker, City Hall, engr.

Wis., West Allis—Making plans extending c.i. mains in Beloit Rd., Jersey, Papham and Burnham Sts., Lincoln, National, 45th, 55th, 56th, 57th, 58th and 82nd Aves. To exceed $15,000. W. Darby, City Hall, engr.

Ia., Ames—Making plans approximately 3 mi. waterworks extensions in various streets. $35,000. P. F. Hopkins, Ames, engr.

Ia., State Center—Making plans waterworks, incl. reservoir, pumping station, filtration plant and elevated tank. $50,000. Brown & Cook, Ottumwa, engrs.

Minn., Brainerd—Plans to purchase 1,600 lin.ft. 6 in. c.i. and 2,600 lin.ft. 8 in. pipe, 1 ton specials, and 2 ton lead. $6,500. E. T. Fleenor, city clk.

Minn., Glencoe—Plans waterworks improvements. $15,000. J. F. Globe, city clk. Engineer not announced.

Kan., Kansas City—Plans 10 new filters, 1½ m.g. capacity each. $350,000. J. D. Donovan, City Hall, engr.

Mo., St. Louis — Soon takes bids several hundred tons 3- to 20-in. c.i. pipe, 3- to 12-in. valves and boxes, O'Brien type fire hydrants, special castings, 3- to 36-in. sizes, and some insert valves. $100,000. Work will be done by day labor. E. E. Wall, City Hall, comr.

Tex., Dallas — Plans election $250,000 bonds, sanitary sewer. Engineer not announced.

Tex., Dilley—Making plans distribution system, 50,000 gal. elevated tank, pumping equipment, etc. $30,000 bonds voted. Terrell Bartlett Engineers, 612 Calcasieu Bldg., San Antonio, engrs. Noted Jan. 15.

Tex., Donna—Voted $50,000 bonds waterworks improvements, incl. mains, pumping equipment, well, etc. W. Whigham, mayor. Noted Feb. 19.

Tex., Flatonia—Plans election soon $75,000 bonds improving water and sewerage systems. Municipal Eng. Co., 715 Praetorian Bldg., Dallas, engrs.

Tex., Giddings — Voted $46,000 bonds mains and additional pumping equipment, etc. J. D. Fields, mayor. Noted Feb. 26.

Tex., Greenville—Voted $400,000 bonds, waterworks improvements, incl. reservoir, intake, pipe line, filtration plant and extension to distributing system. H. Rush, Greenville, engr. Noted Jan. 29.

Tex., Killeen—Voted $16,000 bonds additional mains, pumping equipment, etc. H. N. Law, mayor. Noted Feb. 5.

Tex., Lufkin — Making plans and takes bids about Apr. 15, waterworks improvements, incl. mains and laterals, new tower and tank, and addition to earth dam and spillway, new disposal plant for entire system and extension sanitary sewerage system. $125,000. F. A. Jones, Lufkin, engr.

Tex., Putnam—Voted $36,000 bonds, for waterworks. Address R. Clinton, city comr.

Tex., San Antonio—Election $6,500,000 bonds for purchasing and improving waterworks postponed until municipal ownership bill (now before legislature) has been passed. I. Ewig, city engr. Noted Feb. 10.

Tex., Weslaco—Making plans waterworks improvement incl. mains, addition to pumping equipment. $20,000 bonds voted. Terrell Bartlett Engineers, 612 Calcasieu Bldg., San Antonio, engrs. Noted Jan. 15.

Okla., Blair—Election Mar. 17, $30,000 bonds, new waterworks, incl. drilled well, pump, elevated tank, mains, valves, hydrants and meters. J. G. Harrell, city clk. Engineer not announced.

Okla., Elk City — Making preliminary plans waterworks extensions, incl. new reservoir, pumping mains, valves, etc. $30,000. Engineer not selected.

Okla., Holdenville — Making preliminary plans new pumping station, reservoir, pumping equipment, mains, valves, etc. Election early in March $80,000 bonds for same. V. V. Long & Co., 1300 Colcord Bldg., Oklahoma City, engrs. Noted Jan. 8.

Okla., Idabel — Election Mar. 17, $23,000 bonds for new motor driven pumps, oil engine, 250 water meters and transmission line. V. V. Long & Co., 1300 Colcord Bldg., Oklahoma City, engrs. Noted Nov. 20.

Okla., Okemah — Plans waterworks extensions. $188,000. V. V. Long & Co., 1300 Colcord Bldg., Oklahoma City, engr. Noted Sept. 18.

N. M., Artesia — Making surveys and plans improving water system. $50,000. Burns, McDonnell & Smith Eng. Co., 412 Marsh-Strong Bldg., Los Angeles, Calif. and 402 Interstate Bldg., Kansas City, Mo., engrs.

N. M., Roswell — Making plans improving water system. $100,000. Burns, McDonnell & Smith Eng. Co., 412 Marsh-Strong Bldg., Los Angeles, Calif. and 402 Interstate Bldg., Kansas City, Mo., engrs.

Idaho, Burley — Plans to issue $29,500 bonds to drill and case well for water supply, also purchase city cemetery.

Calif., Alhambra—City plans to purchase 100 fire hydrants. M. H. Irvine, city engr.

Calif., Mayfield—See "Sewers."

Calif., Santa Rosa—Bd. Pub. Utilities, G. R. Cadam, secy., plans to purchase 1 turbine pump with electric motor, direct connected, of 1200 r.p.m., 440 volt, 60 cycle. P. F. Green, city engr.

Que., Quebec—Plans 30 m.g. reservoir, $425,000; concrete dam on St. Charles River, $25,000; and two 5,000 g.p.m. pumps, $50,000. F. C. Laberge, 30 St. James St., Montreal, engr.

Que., St. Benoit — J. N. Cloutier plans reservoir and gravity piping system. $25,000.

Que., St. Cecile de Whitton — Plans gravity system. $25,000. J. G. Beaudoin, city secy. Engineer's name withheld.

Ont., North Bay — Voted about $38,500 bonds for waterworks.

Waterworks (Continued)

Ont., Waterford—Making plans and takes bids about Apr. 1, waterworks system. $50,000. C. C. Fairchild, 169 Colborne St., Brantford, engr.

Ont., Welland — Water Comn. making plans and takes bids about May 1, filtration plant. $250,000. W. E. Forster, city engr.

Ont., Woodstock — Water Comn. plans 18 in. wood or iron mains from Springs to power house. $40,000. J. G. Archibald, City Hall, engr.

BIDS DESIRED

N. Y., Brooklyn — Mar. 11, by N. J. Hayes, comr. Water Supply, Gas & Electricity, Municipal Bldg., New York, mains in Delamere Pl., Eastern Parkway, Narrows, Nostrand, 110th, O and P Aves., Bryant, Clinton, Kimball, Montgomery, 62nd, 71st, 78th, 80th, 90th, East 5th, 16th, 92nd, West 8th, 9th and 33rd Sts., here.

N. Y., Long Island City—Mar. 9, by N. J. Hayes, comr. Water Supply, Gas & Electricity, Municipal Bldg., New York, mains in 69th and 171st Places, Carolin, Albion, Ingram, 111th, 171st and 208th Sts., 48th, 57th, Borden, Lenox, Willow and 32nd Aves., here.

N. Y., New York — Mar. 9, by N. J. Hayes, comr. Water Supply, Gas & Electricity, Municipal Bldg., mains in Throggs Neck Blvd., Shore Dr., Barker, Barnes, Byron, Chaffee, Cranford, Ely, Meagher, Pitman, Tieman and Wickham Aves., East 212th, East 231st, 239th and 242nd Sts.

N. Y., Rome—See "Sewers."

N. J., Cape May — Mar. 12, by City Comrs., fuel oil pumping and air lift machinery for waterworks. H. W. Bell, city engr.; adv. En. N.-R. Mar. 5.

S. C., Spartanburg—Apr. 14, by Commissioners Pub. Wks., rein.-con. dam, power house, water purification plant, rein.-con. reservoir, etc. P. H. Norcross, 1404 Candler Bldg., Atlanta, Ga., consult. engr.; adv. E. N.-R. Mar. 5.

Fla., Tallahassee — Mar. 17, by City Manager, 1 single stage centrifugal pump, etc. B. H. Bridges, city aud. and clk.; adv. E. N.-R. Mar. 5.

Wis., La Crosse—Mar. 12, by Dept. Pub. Wks., c/o W. Fries, secy., 12,176 ft. 4- to 20-in. c.i. pipe, 20,724 lb. c.i. specials, etc., in 14 streets. C. C. Congdon, city engr.

Wis., Thorp—Mar. 19, by H. Holzhauser, city clk., c.i. extending mains in various streets. $16,000. Private plans. Noted Jan. 15.

Minn., St. Paul. — Mar. 10, by H. W. Austin, city purch. agt., 300,000 gal. steel reservoir on concrete foundation at McCarrons station, 75 coils of ¾ in. extra strong lead pipe, 800 lin.ft. 60 in. O. D. steel pipe, and 5 special bends. G. M. Shepard, city engr.

Tex., Rusk—F. A. Jones, city secy., taking bids earth dam, concrete spillway, filtration plant, wash tank, pumping plant and extending mains and laterals in various streets. $55,000. F. A. Jones, Rusk, engr. Noted Sept. 11.

BIDS RECEIVED

Kan., Kansas City—G. T. Derby, purch. agt., Feb. 10, two 4 m.g. pumps for booster service, from U. S. Wind Engine & Pump Co., 1100 Hickory St., Kansas City, Mo., $4,980. Noted Feb. 5.

Minn., St. Paul — H. W. Austin, city purch. agt., Feb. 5, concrete conduit, from D. W. Moore & Moline Bros., 894 Edmund St., intake and terminal chambers for Vadnais-Lake McCarron Station conduit, $768,173; from Waterous Fire Engine Wks., 80 Fillmore Ave., E., 200 single steamer 5 in. valve fire hydrants, $82.02 each, and 20 double steamer 6 in. valve fire hydrants $105.82 each. Noted Jan. 20.

CONTRACTS AWARDED

R. I., Providence — Water Supply Bd., about 1.6 mi. 66 in., and 0.3 mi. 48 in. steel pipe line, with connections and appurtenances, etc., to C. A. Haggerty, Webster, Mass., $306,425. Noted Feb. 19.

Pa., Phila. — Dept. Pub. Wks., Bureau Water, 2,080 tons 16- to 24-in. c.i. pipe, Contr. 737, to Mazzola & Marano, 709 South 7th St., $283,565; 50,000 lbs. piglead, Contr. 741, to N. Trotter & Co., 36 North Front St., $0.97 per lb., total $4,850.

O., Cincinnati — City, c.i. pipe, special castings and valves and other miscellaneous work in connection with water distribution system in various streets during 1925, to M. F. Quill & Son, 409 Gerke Bldg., $84,020. Engrs. est. $75,000. Noted Feb. 12.

Mich., Springwells—B. P. Esper, city clk., 3,000 ft. 30 in. c.i. mains in Dix Ave., to Coolsaet Bros., 12734 Michigan Ave., Detroit, $25,000. Noted Feb. 12.

Ill., Bartlett — Distribution system, incl. 13,931 ft. or 230 tons 6 and 8 in. mains, nineteen 6 and 8 in. gate valves and boxes, 23 fire hydrants, etc., to Logan Constr. Co., Elgin. Noted Jan. 29.

Wis., Kenosha—C. M. Osborn, city mgr., 496 tons Class B water pipe to Amer. Cast Iron Pipe Co., 38 South Dearborn St., Chicago, Ill., at $48.48 per ton; 76 hydrants, to Traverse City Iron Wks., Traverse City, Mich., $51.50 each; all brass goods for season to Glauber Brass Co., Cleveland, O. Noted Feb. 12.

Minn., Mankato—For 11,320 ft. 6 and 8 in. c.i. pipe and 7 tons specials castings, to U. S. Cast Iron Pipe and Fdry. Co., 625 Plymouth Bldg., Minneapolis. Noted Feb. 5.

Minn., Minneapolis — F. S. Gram, city purch. agt., 297 tons c.i. water pipe, part to Amer. Cast Iron Pipe Co., 712 Plymouth Bldg., and the rest to U. S. Cast Iron Pipe & Fdry. Co., 625 Plymouth Bldg.; 7,000 curb and corporation cocks, to Mueller Mfg. Co., 512 West Cerro Gordo St., Decatur, Ill. Noted Jan. 29.

Minn., Minneapolis — F. S. Gram, city purch. agt., one 10 ton electric crane to Rose Mchy. Co., 723 Metropolitan Life Bldg., Minneapolis, for Water Dept. $2,435. Noted Jan. 8.

Minn., St. Paul — H. W. Austin, city purch. agt., 481 pieces c.i. water pipe, 24- to 32-in. sizes, all 12 ft. lengths, to Lynchburg Fdry. Co., 122 South Michigan Blvd., Chicago, Ill., $50 per ton; c.i. gate valves and service connection boxes, to Cochran Sargent Co., 5th and Sibley Sts., St. Paul, $2,000. Noted Feb. 5.

Minn., St. Paul — H. W. Austin, city purch. agt., 100 tons c.i. water pipe specials, also c.i. pipe, to Natl. Cast Iron Pipe Co., Tarrant City, Birmingham, Ala., $9,000 and $63,000 respectively; 310 gate valves, various sizes, to Crane Co. of Minnesota, 5th St. and Bway., $6,915; also c.i. pipe, to U. S. Cast Iron Pipe and Fdry. Co., Amer. Trust Bldg., Brimingham, Ala., $62,000.

Neb., Stanton—W. E. Cook, city clk., for excavation, pumps and fittings, to Interstate Mchy. & Supply Co., 1006 Douglas St., Omaha, $3,432; two 8 in. wells, 60 ft. deep, to F. W. Ludwig, Stanton, $938; and masonry, to E. Van Ness, Stanton, $581. Noted Feb. 12.

Mo., Appleton City—For two 8 in. wells, 400 ft. deep, two deep well pumps and one horizontal centrifugal pump, 100,000 gal. tank on tower, several miles 2, 4, 6 and 8 in. pipes, hydrants, etc., to W. F. Hall, Clinton, $47,500. Noted Nov. 13.

Mo., St. Louis—See "Proposed Work."

Tex., Houston—For two 1,000 gal. and two 2,000 gal. wells at Scott St. plant, to Layne Texas Co., 1111 6th St., $91,350; two 1,000 g.p.m. or 2,000 g.p.m. motor driven pumps, to Southern Engine & Pump Co., 615 Washington St. $56,550.

Tex., Paducah—City, c/o P. E. Godfrey, secy., to J. B. Winslett, Dallas, water extensions $15,000, flow line $95,000, sanitary sewers and disposal plant $44,500; to W. D. Edwards, Paducah, pump house and well $19,920; to Plains Paving Co., Wichita Falls, storm sewers $8,600, Willite paving $46,308. Noted Jan. 29.

Ont., St. Catharines — G. F. Peterson, chn. Wateworks Comn., filtration plant, to J. A. Wickett Ltd., 59 Yonge St., Toronto, $262,025; mechanical equipment, to F. Hankin & Co., Ltd., 20 St. Nichols St., Montreal, Que., $126,694. Noted Feb. 5.

Sewers

PROPOSED WORK

Pa., Millvale — Millvale Boro election Mar. 24, $74,000 bonds, main sanitary trunk line sewer in Freemont St. et al.

O., Canton — Stark Co. soon takes bids sanitary sewers in Sect. A, North Canton sanitary sewer between Canton and North Canton $149,652, Sect. B $110,497 and Sect. C $74,952. G. B. Davidson Court House, engr.

Okla., Ponca City — J. W. Crow, city purch. agt., in market for 2,500 g.p.m. motor driven pump.

Ariz., Flagstaff—Mar. 31, by City Clerk, 50 m.g. concrete reservoir, earth embankment type, 94,000 cu.yd. excav., 1,700 cu.yd.

Waterworks (Continued)

concrete and 2,500 squares Gunite; approximately 79,000 ft. 13- to 16-in. copper bearing slip joint steel pipe flow line; distribution system improvements, incl. furnishing, hauling and laying 14,300 ft. 12 and 14 in. Mathison joint steel and 1,400 ft. 12 in. c.i. pipe, also reclaiming and relaying 26,650 ft. 6, 8 and 10 in. c.i. pipe. Burns & McDonnell, 402 Interstate Bldg., Kansas City, Mo., engrs. Noted Jan. 22.

Wash., Bellingham — Apr. 13, by City Council, high line main. $265,000. W. B. Short, city engr.

Calif., San Bernardino—Water Comn. in market for 5,000 ft. each 2.5, 3 and 4 in. full weight standard merchant pipe, black, threaded and coupled with thread protectors, not dipped, also 5,000 ft. 6 in. and 1,000 ft. 8 in. O. D. lap-welded steel water pipe with B & S ends for lead joints. W. Starke, supt.

Calif., San Bernardino—W. Starke, supt. Water Comn., in market for 1,150 lin.ft. 8 in. and 10,000 lin.ft. 6 in. riveted steel water pipe.

BIDS RECEIVED

N. Y., New York — N. J. Hayes, comr. Water Supply, Gas & Electricity, Municipal Bldg., Mar. 9, mains in Barker, Barnes, Byron, Chaffee, Cranford, Ely, Meagher, Pitman and Tieman Aves., from C. De Blasio, 339 7th Ave., Mt. Vernon, $10,765; in Carolin St., etc., from Stanhey Constr. Co., Steinway Ave., Long Island City, $21,-945. Noted Mar. 5.

N. Y., St. George—N. J. Hayes, comr. Water Supply, Gas & Electricity, Municipal Bldg., New York City, Mar. 4, mains in Arden, Bismarck, Bowles, Fitzgerald, Hammersley, Kissam Aves., etc., from G. V. Cornell, Rosebank, $27,500.

O., Cleveland—City, 36 in. (a) steel or (b) c.i. mains in (1) 11,700 ft. North Raw Water Main Dist. (2) 5,000 lin.ft. Pearl Rd., West Side High Service Main, (3) 15,750 ft. Edgewater Dr., from Great Lakes Constr. Co., 200 B. F. Keith Bldg., (a1) $308,295; from Langhan Constr. Co., Marshall Bldg., (a2) $88,575; from Joseph, Kalill & Jackson, Erie Bldg., (b2) $94,858 (a3) $280,060. Noted Feb. 26.

Wis., Wauwatosa—A. V. Brigham, city clk., Feb. 27, from Waterous Fire Engine Co., 80 Fillmore Ave., St. Paul, Minn., 25 hydrants at $80 and $75 each, twenty-five 6 in. gate valves $25.50 each, and six 8 in. gate valves $40 each. Noted Feb. 19.

CONTRACTS AWARDED

N. J., Sea Girt—Common Council 150,000 gal. elevated steel water tank with steel tower, to Pittsburgh-Des Moines Steel Co., Curry Bldg., Pittsburgh, Pa., $9,500. Noted Feb. 5.

N. C., Aulander — Water and sewerage systems, to L. D. Harper, Rocky Mount, $80,000.

Ill., Highland—B. D. Tibbetts, city clk., 52,774 ft. 2- to 8-in. c.i. mains in various streets, 65 fire hydrants, 71 valves and 6 boxes, clear well, filter plant of 2 units 600,000 g.p.m., two 700 g.p.m. motor driven pumps, to Merkle Mchy. Co., 1733 Walnut St., Kansas City, Mo., $125,000. Noted Feb. 19.

Ill., Pinckneyville — For 1,400 g.p.m. centrifugal pump and motor, 500 g.p.m. and two 600 g.p.m. pumps and motors, 500 g.p.m. fire pump and gasoline engine, to Farrar Pump & Machine Co., Granite Bldg., St. Louis, Mo., $5,337. Noted Feb. 19.

Wis., Fond du Lac — Water Dept., J. Breister, supt., to J. B. Clow & Sons, 544 South Franklin St., Chicago, Ill., 2,500 ft. 4 in. pipe at $54.50 per ton, and 3,000 ft. 6 in. pipe $50.50 per ton. Noted Feb. 19.

Wis., New London—City, c/o C. Thompson, city clk., will lay 7,050 lin.ft. 6 and 8 in. Class B mains in various streets, by day labor. To exceed $15,000.

Ia., Ames — City will construct 3 mi. mains, various sizes, with own forces. P. F. Hopkins, city mgr. Noted Mar. 5.

Kan., Kansas City—Two 4 m.g. motor driven centrifugal pumps, to DeLaval Steam Turbine Co., 401 Dwight Bldg., Kansas City, $5,725. Noted Mar. 5.

Tex., Corpus Christi—Pump and Diesel engine driven generators, to San Antonio Machine & Supply Co., 325 North Center St., San Antonio, $43,725. Noted Feb. 19.

Okla., Braman—Waterworks, incl. open well, elevated tank and tower, and distribution mains, to Galaciez Constr. Co., Enid, $21,421. Noted Jan. 8.

Okla., Durant—City will construct 6,600 ft. 4- to 8-in. mains, water softening plant, etc., by day labor under supervision of L. V. Stinson, City Hall, engr. $35,000. Noted Oct. 30.

Wash., Seattle—Bd. Pub. Wks., mains in West Marginal Way, LID 3947, to G. Argenteria & Co., 1819 Weller St., $63,797. Engrs. est. $70,695. Noted Feb. 26.

Calif., Los Angeles — Los Angeles Co. for fire protection and water system, also water softeners at Olive View Sanitorium, here, to Howard-Olsen Co., 2103 Santee St., $28,085.

Sewers

PROPOSED WORK

Conn., Watertown — Bd. Water Comrs., F. W. Judson, chn., plans sewage system. $25,000. Engineer not announced.

N. J., Hawthorne—Takes bids about June 15, sewerage system. $300,000. H. J. Harder, 129 Market St., Paterson, engr.

W. Va., Charleston — Election Mar. 19, $100,000 bonds, sanitary sewerage system. D. C. Dolly, city clk.

Fla., Bartow—Election Mar. 31, $41,000 bonds extending sewerage system. R. B. Huffaker, mayor.

O., Canton—Bd. Control soon takes bids about 1 mi. South West Storm Water Sewer. $50,000. W. E. Sarver, City Hall, engr.

O., Cincinnati—Plans 1,590 ft. 8- to 24-in. vitr. clay and 2,973 lin.ft. 33- to 42-in. trunk sewer in Montgomery Pike and Woodmont Ave. $69,100. F. Krug, City Hall, engr.

O., Columbus—See "Streets and Roads."

O., Martins Ferry — City Council soon takes bids for 25,000 lin.ft. sewers in Heil-Davis addition. $51,000. A. Lundberg, Martins Ferry, engr.

Minneapolis. Noted Mar. 5.

OFFICIAL PROPOSALS

Bids: March 26.

Roads and Bridges

STATE HIGHWAY COMMISSION
Richmond, Va., March 5, 1925.

Sealed bids will be received at the office of the State Highway Commission, State Office Building, Capitol Square, Richmond, Va., until 10:30 a. m. Thursday, March 26th, 1925, for the construction of:

1.—RT. 33—PROJ. F118A: 0.93 Mi. So. Roanoke—6.16 Mi. So. Roanoke, in Roanoke County. Station 299+35 to 330+35 only. 0.586 of a mile of 18' x 8" Bit. Mac. Surfacing.

2.—RT. 33—PROJ. F118B: 6.16 Mi. So. Roanoke—10.13 Mi. So. Roanoke. Station 330+35 to 533+00, except bet. Sta. 488+95 and Sta. 513. 3.244 miles of 18' x 18" Bit. Mac. surfacing, in Roanoke and Franklin Counties.

3.—RT. 33—PROJ. F118C: 10.13 Mi. So. Roanoke—14.51 Mi. So. of Roanoke, Station 533+00 to Sta. 764, in Franklin County. 4.376 Mi. of 18' x 8" Bit. Mac. Surfacing.

4.—RT. 35—PROJ. F145D: 1.42 Mi. No. Homeville — 3.78 Mi. No. Homeville, in Sussex County. Station 462+00 to Sta. 587+00. 2.366 Miles of 18' x 8"-6"-8" concrete. Approx. 6 Ac. Cl. & Grub., 10,-792 Cu.Yds. Excav., 5,472 Cu.Yds. Borrow, 280 Lin.Ft. Pipe, 45 Cu.Yds. "A" Conc., 12 Cu.Yds. "B" Conc., 2,989 lbs. steel, 24,982 Sq.Yds. Conc. Surf., 464 Lin.Ft. Gd. Rail, 26 R/W Monuments.

INCLUSIVE OF BRIDGE at Mevlett's Mill, 54'-3½" long. Roadway: 24'. Approx. 73 Cu.Yds. "A" Conc., 69 Cu.Yds. "B" Conc., 13,300 lbs. steel, 560 Lin.Ft. Piles.

5.—RT. 35—PROJ. F145F: 0.27 Mi. No. Homeville—1.42 Mi. No. Homeville, in Sussex County. Station 401+40 to Station 587+00. Approx. 1.35 Ac. Cl. & Grub., 3,097 Cu.Yds. Uncl. Excav., 306 Cu.Yds. Borrow, 140 Lin.Ft. Pipe, 6 Cu.Yds. "B" Conc., 12,120 Sq.Yds. Conc. Pavement, 14 R/W Monuments.

6.—RT. 33—PROJ. F169A: 3.17 Mi. So. Buchanan—7.25 Mi. So. Buchanan in Botetourt Co. 4.089 Mi. of 18' x 8" Bit. Mac. Approx. 21 Ac. Cl. & Grub., 26,760 Cu.Yds. Excav., 6,083 Cu.Yds. Borrow, 710 Lin.Ft. Pipe, 114 Cu.Yds. "A" Conc., 618 Cu.Yds. "B" Conc., 43,811 Sq.Yds. surfacing 3,008 Lin.Ft. Gd. Rail, 220 Cu.Yds. Dry Rubble Masonry, 86 R/W Monuments INCLUSIVE OF BRIDGE, 6.8 Mi. East of Troutville, Sta. 432. Length: 42'-11". Roadway: 24'. 7,570 lbs. steel, 68 Cu.Yds. "A" Conc., 59 Cu.Yds. "B" Conc., 181 Cu.Yds. Cement rubble masonry.

7.—RT. 14—PROJ. F259A: Gretna—North, in Pittsylvania County 3 Mi. 22' x 0"-10"-0" Soil Rd. Approx. 6.5 Ac. Cl. & Grub., 17,000 Cu.Yds. Excav., 1300 Cu.Yds. Borrow, 53 Cu.Yds. "A" Conc., 61 Cu.Yds. "B" Conc., 3,649 lbs., steel, 485 Lin.Ft. Pipe.

8.—RT. 20—PROJ. S323C: Sugar Hill—Intersection soil Rd. near Phoenix, in Charlotte County. 7.111 Mi. of 22' x 0"-10"-0" Soil Rd. Approx. 20 Ac. Cl. & Grub., 105,-657 Cu.Yds. Excav., 235 Cu.Yds. Borrow, 1960 Lin.Ft. Pipe, 475 Cu.Yds. "A" Conc., 78 Cu.Yds. "B" Conc., 44,359 lbs. reinf. Steel, 9384 Lin.Ft. Gd. Rail, 126 R/W Monuments.

INCLUSIVE OF BRIDGE (concrete) over Turnip Creek, 65' long, Roadway: 24'. 84 Cu.Yds. "A" Conc., 153 Cu.Yds. "B" Conc., 16,450 lbs. steel.

9.—RT. 31—PROJ. F347: 3.80 Mi. No. Stafford C. H.—Stafford C. H. in Stafford County. 3.801 Mi. of 18' x 8"-6"-8" Conc. Approx. 10.6 Ac. Cl. & Grub., 38,025 Cu.Yds. Excav., 175 Cu.Yds. Borrow, 1394 Lin.Ft. Pipe 61 Cu.Yds. "A" Conc. 50 Cu.Yds. "B" Conc., 4300 lbs. reinf. steel,—40,596 Sq.Yds. Conc. Paymt, 1200 Lin.Ft. Gd. Rail, 68 R/W Monuments.

INCLUSIVE OF BRIDGE (Concrete) over Austins Run, 43' long, 24' Roadway. 65 Cu.Yds. "A" Conc., 187 Cu.Yds. "B" Conc., 12,040 lbs., steel.

10.—RT. 24—PROJ. S385; Bridge and approaches over Meherrin River at Emporia in Greenesville Co. Length: 288'-9". Width of roadway; 24' and two 5' sidewalks. One 110' reinf. conc. arch span and 5-30' reinf. conc. beam spans, Approx. 1083 Cu.Yds. "A" Conc., 188,500 lbs. reinf. steel, 8,600 Cu.Yds. Excav. APPROACHES: 0.17 Mile of 3" sheet asphalt top on 5" concrete base. Roadway: 18'-24'. 3510 Cu.Yds. Excav., 5589 Cu.Yds. Borrow, 108 Lin.Ft. Pipe, 928 Lin.Ft. Gd. Rail, 3.2 Cu.Yds. "B" Conc., 1253 Sq.Yds. Surfacing, 1217 Lin.Ft. curb and gutter, 676 Sq.Yds. Concrete sidewalks.

11.—RT. 17—PROJ. S391: 0.5 Mi. W. Goshen—6.79 Mi. W. Goshen in Rockbridge County & Bath County. 6.318 Mi. 24'-26' Sr. & Drainage only. Approx. 17 Ac. Clear. & Grub., 67,455 Cu.Yds. Excav., 4,240 Cu.Yds. borrow, 2198 Lin.Ft. Pipe, 55 Cu.Yds. "A" Conc., 79 Cu.Yds. "B" Conc., 3180 lbs. steel, 15,371 Lin.Ft. Gd. Rail, 160 R/W Monuments, 1524 Cu.Yds. Dry Rubble Masonry.

INCLUSIVE OF BRIDGE OVER MILL CREEK, 82'-6" long. 24' Roadway. 98 Cu.Yds. "A" Conc., 104 Cu.Yds. "B" Conc., 19,890 Lbs. steel.

Proposal guaranty to be cert. check, cashier's check, or cert. of deposit, to the amount of $500 for bids less than $100,-000 and $1,000 for bids more than $100,-000. Proposal bonds 20% in excess of the above amount may be used.

Plans and specifications are on file at the Richmond office, State Highway Commission and at the offices of the following Dist. Engrs. Projs. 118 A, B, & C, and 169A, Salem, Va., 145D, F and 385, Suffolk, Va. 259A Lynchburg, Va., 323C Richmond, Va., 347 Fredericksburg, Va., and 391 Staunton, Va.

Additional plans for bidders on the above projects may be obtained upon application to the State Highway Dept., upon receipt of $5.00 payable to H. G. Shirley, $2.50 of which will be refunded if plans are returned in good condition within two weeks after bids are opened.

Engineers will be at the following places to show prospective bidders over the work:

Projs. 118A, B, & C: 2 p. m. Thurs. March 12th, Roanoke Hotel, Roanoke, Va. Projs. 145D & F: 12:30 p. m. Wed. March 18th, Homeville, Va. 169A — 10 a. m. Thurs. March 12th, at Buchanan, Va. Proj. 11 a. m. Tues. March 17th, at Gretna, Va. Proj. 323C 10:30 a. m. Wed. March 18, Brookneal Hotel, Brookneal, Va. Proj. 347—10:30 a. m. Tues. March 17th, Stafford C. H., Va. Proj. 385—11 a. m. Thurs. March 19th, Hotel Emporia, Emporia, Va. Proj. 391 2:15 p. m. Friday, March 13th, C. & O. R.R. Station, Goshen, Va.

The State Highway Commission reserves the right to reject any or all bids.

C. S. MULLEN, Chief Engineer, H. G. SHIRLEY, Chairman.

Bids: April 7.

Holland Tunnel Work

CONTRACT NO. 7
New York, N. Y.

Sealed bids will be received by the New York State Bridge and Tunnel Commission and New Jersey Interstate Bridge and Tunnel Commission at the office of the Commissions, Room 3004, Woolworth Building, New York City, until 2:00 o'clock p.m. (Eastern Standard Time), Tuesday, April 7th, 1925.

For furnishing and setting white glazed wall tile and enamels, painting the concrete ceiling, furnishings and setting slides and screws, frames and doors and furnishing and erecting hand rail and other items of interior finish of the Holland Tunnel, known as Contract No. 7.

A statement of the quantities of the various items of work and further information are given in the invitation to bid, forming part of the contract. At the above place and time the bids will be publicly opened and read. The award of the contract, if awarded, will be made by the Commissions as soon thereafter as practicable. The Commissions reserve the right to reject any and all bids.

Bonds is the sum of One Hundred Fifty Thousand ($150,000) Dollars each to the State of New York and to the State of New Jersey will be required for the faithful performance of the contract.

No bids will be received or considered unless accompanied by two certified checks upon a National or State Bank or Trust Company, satisfactory to the Commissions and located in New York City or the cities of Newark or Jersey City in the sum of Twenty-five Thousand ($25,000) Dollars each, one payable to the order of the "Comptroller of the State of New York," and the other payable to the order of "The New Jersey Interstate Bridge and Tunnel Commission."

The time allowed for the completion of the work is 16 months after the date of the delivery of the contract.

Books containing forms of invitation to bid, proposals, contract, specifications and bond and contract drawings, etc., can be obtained at the office of the Commissions for the sum of $5.00 per set.

New Jersey Interstate Bridge and Tunnel Commission.
THEODORE BOETTGER, Chairman.

New York State Bridge and Tunnel Commission.
GEORGE R. DYER, Chairman.

Bids: March 17.

Construction of Cross Keys-Williamstown Road, Sect. No. 1

Woodbury, N. J.

Notice is hereby given that sealed bids will be received by the Board of Chosen Freeholders of the County of Gloucester for the construction of Cross Keys-Williamstown Road, Sect. No. 1, in the Township of Monroe, in the County of Gloucester, with a concrete pavement; estimated amount of concrete pavement required is Forty thousand one hundred fifty-eight (40,158) square yards, and opened and read in public at Court House, Woodbury, N. J., on Tuesday, March 17th, 1925, at 11.00 o'clock a.m.

Drawings, specifications and forms of bid, contract and bond for the proposed work, prepared by William C. Cattell, County Engineer, have been filed in the office of the said engineer at Merritt Building, Woodbury, N. J., and may be inspected by prospective bidders during business hours. Bidders will be furnished with a copy of the specifications and blue prints of the drawings by the engineer on proper notice and payment of cost of preparation. Bids must be made on the standard proposal forms in the manner designated therein and required by the specifications, must be enclosed in sealed envelopes, bearing the name and address of bidder and name of road on the outside, addressed to The Board of Chosen Freeholders of the County of Gloucester and must be accompanied by a certified check for not less than ten (10) per cent of the amount bid, provided said check shall not be less than $500.00 nor more than $20,000.00 and be delivered at the place and on the hour above named. The standard proposal forms is attached to the specifications, copies of which will be furnished on application to engineer.

By order of The Board of Chosen Freeholders of the County of Gloucester.
CHESTER N. STEELMAN, Clerk.

WILLIAM C. CATTELL, County Engineer.

Bids: March 24.

Foundation Construction

OFFICE OF THE DIRECTOR,
DEPARTMENT OF PUBLIC WORKS
Philadelphia, Pa.

Sealed proposals will be received at Room 216, City Hall, until 12 o'clock noon on Tuesday, March 24, 1925 and opened at that time in Room 216, City Hall, for Foundation Construction comprising Excavation, Concrete Piling, Pile Capping and Bracing for A Municipal Stadium upon City-owned property east of Broad street and south of Pattison avenue, known as East League Island Park.

Plans and proposal forms may be obtained by bidders from the architects, Simon and Simon, at 249 S. Juniper Street, upon the payment of Fifty (50) Dollars, which sum will be refunded upon the return of the said specifications and plans in an undamaged condition and within one week after the opening of bids.

All proposals must be accompanied by a certified check in the amount of five (5) per cent of the bid, in accordance with the ordinance of March 7, 1924 and amendment of July 2, 1924.
GEORGE H. BILES, Director.

Bids: April 27.

Dredging

Leesburg, Fla.

Sealed proposals on blank forms furnished by the City and addressed to the "Mayor and Commissioners, Leesburg, Florida," will be received until 12 o'clock, noon, April 27, 1925, at Leesburg, Florida, for furnishing all equipment and labor and doing the following work:

Approximately 46,500 cu.yds. sand and muck fill.

Each bid shall be accompanied by a certified check for not less than two hundred and fifty dollars ($250.00), made payable to the City Manager.

Plans and specifications can be seen at the office of the City Manager, and bidding blanks may be obtained from him.

The right is reserved to reject any or all bids.

DR. W. A. MACKENZIE, Mayor Commissioner.
D. E. BIVINS, City Manager.
W. E. HARKNESS, City Clerk.

S. H. JAUDON ENGINEERING CO., Engineers.
Leesburg, Florida.
